

Job Title: Wetland/Soil Scientist

Salary/Compensation: Based on experience.

Location of position: Plaistow, NH

Employer: Wetlands Preservation, Inc.

Description of employer:

Wetlands Preservation, Inc. is an environmental consulting firm specializing in wetland delineation, resource area evaluations, wildlife habitat evaluations, rare species studies, impact mitigation, and permitting in New England.

Work schedule: Full-time

General Job description:

Job responsibilities: wetland delineation, assessments, wildlife habitat evaluations, endangered species surveys, wetland restoration/replication design, construction monitoring, permitting, report preparation, and public presentations. Candidates must be able to work independently and as part of a team under sometimes physically challenging field conditions and possess a working knowledge and understanding of federal, state, and local regulations and permitting; have strong technical writing and communications skills; maintain good organizational and time management skills. Strong technical skills are necessary.

Qualifications: Qualified candidates would possess a B.S. in Biology, Ecology, Wildlife Biology, Plant/Soil Sciences, or other related environmental sciences and must have 3 to 8 years direct field experience performing wetland delineations, conducting Wildlife Habitat Evaluations, preparing permit applications, and performing environmental monitoring services in Massachusetts. Experience with ARC GIS and GPS data collection, Stream Stats, rare plant or animal surveys, advanced degrees, and PWS certification are a plus. Basic PC skills required.

Deadline to apply (if any): April 2017
