

DonorSearch was founded in 2007 with one goal: to provide more accurate, more comprehensive, more actionable data to help nonprofits of all types achieve better fundraising and outreach results. Using proprietary philanthropy databases and algorithms, as well as tens of millions of records from public databases, we provide reports manually verified by in-house prospect researchers that combine past philanthropic activity and traditional markers. The result: you not only know each individual's capacity for giving, but also the likelihood of each prospect supporting your mission.

Special Offer for WVDO Members
