

PRESS RELEASE

ALVMA Recognizes National Poison Prevention Week

March 18, 2013

FOR IMMEDIATE RELEASE

MONTGOMERY, Ala. - March 17-23, 2013 is National Poison Prevention Week and the Alabama Veterinary Medical Association is urging pet owners to remember their pets as well. This is a great time for pet owners to do a little spring cleaning and check their homes for any toxins which their pets may have access to.

"It is important to remember that animals may be affected differently than humans by household items, plants, and foods. Like infants, pets are smaller than adults and they metabolize more quickly. They are also closer to the ground which make them more subjectable to harmful poisons," says Dr. Bill Allen, president of the ALVMA.

Below is a list of some of the top poisons pets are most susceptible to. They are as follows:

- Foods (chocolate, xylitol and grapes/raisins)
- Insecticides (sprays, bait, and spot-on flea/tick treatments)
- Mouse and rat poison (rodenticides)
- Human and pet medications
- Household cleaners (sprays, detergents, polishes)
- Fertilizers (bone meal, blood meal and iron based products)

Other poisons that are extremely dangerous include antifreeze and acetaminophen. Veterinarians have also seen numerous cases of xylitol poisoning (xylitol is found in many sugarless gums, candies and mints), human medications such as non-steroidal anti-inflammatory medications and antidepressants, flowers, chocolate, fertilizers, and various pest control products. Symptoms can range from digestive upset and neurological signs, to liver and/or kidney failure. This is the perfect time of year to do some spring cleaning and remove any items that could be hazardous to your pets from within their reach. Sometimes induction of vomiting is indicated, while in other cases IV fluid therapy and oral charcoal therapy may be indicated. Poisons are fast-acting and can be fatal so do not hesitate to contact your veterinarian if you see any indications of poisoning such as vomiting, diarrhea, drooling/hypersalivating, inappetence, nausea, coughing or vomiting blood, weakness, lethargy or collapse.

The ALVMA encourages pet owners to take preventative measures to avoid poisoning incidents.

- Be familiar with poisonous items by checking the list at www.petpoisonhelpline.com;
- Do not leave medicine bottles within reach of pets (dogs can quickly chew through a pill bottle.);
- Create a pet poison first aid kit;
- Know the signs of poisoning in your pet;
- Be especially careful during holidays with candy;
- As spring approaches, be aware of all of the harmful plants and gardening items that could cause your pet harm;
- ...and last, but not least - always keep the number for your veterinarian in a handy location.

Founded in 1907, the Alabama Veterinary Medical Association is comprised of approximately 725 veterinarians from around the state, all committed to protecting people, pets and livestock – yesterday, today and always.
