I. Welcome

The International Examination & Certification Board (IECB) of the College of Optometrists in Vision Development (COVD) welcomes you as an enrollee in the Fellowship Process. This guide will serve to acquaint you with the background information, references, requirements and procedures for becoming a Board Certified Fellow.

A. What is a Fellow?

A Fellow has demonstrated advanced competency in the areas of vision development, binocular vision, visual information processing, and vision therapy. We believe that the learning experience you are embarking on will be a rewarding one. Not only will you benefit from expanding your knowledge through guided study, but you will also gain satisfaction through public recognition of your achievement. Please see the section on learning objectives to get a good overview of the subject areas in which a Fellow has been certified to have advanced knowledge and competence. After you have successfully completed your Fellowship certification, we urge you to stay abreast of advances in the field, as well as encouraging you to accept new responsibilities and leadership roles.

B. IECB Mission Statement

The mission of the IECB is to evaluate and certify the advanced competency of optometrists and vision therapists in providing care as related to development and behavior. This mission is accomplished by encouraging continuous learning and providing an evaluation process culminating in the identification of those professionals with demonstrated knowledge and clinical skills in vision care as related to development and behavior. The certification process is designed to encourage professional growth in a collegial environment.

II. Fellowship Process Overview

A. The Fellowship Process

1. Eligibility and Enrollment
   - U. S. and Canadian Candidates must be optometrists who have graduated from a school or college that has been accredited by the Accreditation Council on Optometric Education (ACOE), or an international equivalent thereof.
   - International Candidates must be optometrists or the equivalent thereof in a country other than the United States and Canada.
   - COVD membership is not a requirement to be a candidate, but members are entitled to discounted certification fees.
   - The first step is to complete the Fellowship Process Application (Appendix A).
   - Once your application is accepted, your enrollment period begins and you may begin the Fellowship Process.
   - It is strongly recommended that when the candidate begins the Fellowship process he/she be thoroughly familiar with this Certification Guide. COVD will post updated versions as soon as they are available. The updated version supersedes any previous versions Policies and procedures in the most recent posted version
are to be adhered to as current.

- If a candidate enters a new year during their active candidacy and experiences the release of an updated guide, that guide must be used for all remaining assignments. It is the candidates’ responsibility to check to the website for the most updated version.
- Once enrolled, you have up to four years to complete the Fellowship process. Candidates may enroll for additional enrollment periods. Fees paid in the initial enrollment periods do not carry over to subsequent re-enrollment request.
- **Timeline** – It is your responsibility to follow the Fellowship Timeline (Appendix B) and submit all materials, forms, and fees prior to or on the deadline date, should you plan on completing the process during that year.

2. Phase One: Guided Study

The Guided Study portion of the Fellowship process is designed to facilitate study through completion of six Open Book Questions and three Case Reports from patients you have worked with directly in your practice. The goal is to provide you with the opportunity to expand your knowledge base and to discuss your rationale for treatment of different types of visual disorders. You are encouraged to work on the Guided Study requirements at your own pace.

**Step 1:** This step in the Fellowship process involves documentation that you are experienced in vision development and vision therapy by meeting the following three criteria:

A. You have completed at least 3 years of post-graduate clinical experience, including your year(s) of residency education, if applicable;

B. You have been involved in direct clinical diagnosis and management of office-based vision therapy for 2 years and a minimum of 1000 hours.

C. You have submitted documentation of at least 100 hours of continuing education in vision development, binocular vision, visual perception/visual information processing and vision therapy. The following number of hours can be applied to the 100 hour requirement:

1. Formal CE courses – up to 100 hours
2. Independent study – up to 30 hours. The candidate will provide a list of topics studied and resource material used (textbooks, journal articles, audiocassettes, etc.) Items on the list may be used as the basis of questions in the Oral Interview.
3. Optometric Study Group participation – up to 20 hours. The candidate will provide a list of meetings attended and discussion topics.
4. Completion of one year pediatric or rehabilitation or vision therapy residency Process accredited by the Accreditation Council of Optometric Education automatically fulfills the 100 hour CE requirement.

Note: If you have engaged in other activities that added to your knowledge
base or clinical skills in the area of VT, please feel free to submit the hours. Your submission will be reviewed to determine if the hours can count toward the CE requirement.

The CE requirement of 100 hours must be completed before the Formal Candidacy Phase of the Fellowship process.

Step 2: Selection of a mentor to work with you throughout the process.

Any active Fellow can serve as a mentor for the Fellowship process. If you need assistance in finding a mentor, the Fellow Mentor Committee Chair will contact you regarding the selection of a mentor to work with you.

Step 3: Preparation and Submission of written answers to six Open Book Questions (OBQs) (OBQs begin on page 10) AND three written clinical Case Reports (Case Reports begin on page 11).

Your answers to the OBQs and Case Reports can be submitted to the COVD office one at a time, or more than one at a time for review. Fellowship Guided Study Open Book Questions and Case Reports Payment Form (Appendix C) with payment must be submitted at same time or prior to the first submission. Your mentor must acknowledge in writing that the OBQs and Case Reports have been reviewed and approved by him/her prior to submission to the IECB.

The section starting on page 15 of this Certification Guide titled Format, Submission, and Review Guidelines for Open Book Questions (OBQs) and Case Reports provide the details of how to submit the OBQs and Case Reports.

Three IECB members will perform a detailed review of your submitted OBQs and Case Reports. These reviewers will provide you with recommendations for further study to expand your knowledge on specific topics that will prepare you for the Formal Candidacy of the Fellowship process, namely, the Multiple Choice Examination (MCE) and Oral Interview. Your Guided Study materials (OBQs and Case Reports) remain anonymous throughout the review process.

PLEASE NOTE: This process may take up to six weeks from the time you submit your OBQs and Case Reports until you receive a letter from the IECB Chair notifying you of whether you’ve completed the particular OBQ(s) or Case Report(s). The Chair will also notify you by letter when you’ve completed the Guided Study phase of the process.

3. Phase Two: Formal Candidacy

The final phase in the Fellowship process consists of the Multiple Choice Examination (MCE) and Oral Interview. Before you can begin this phase you must submit the Fellowship Multiple Choice Examination and Oral Interview Payment.
Form with payment (Appendix D).

**Step 1: Successful completion of the MCE.**

This is a 100 question test. Performance is reported as pass or fail based on criterion-referencing (not graded on a curve—you are not competing against the other candidates in your year). Raw scores are not relevant to the process and are not released. The questions have been written by Fellows and edited for content and clarity, and are analyzed by experts in standardized test design after each test administration.

You are allowed up to three hours to complete the examination.

If a candidate does not receive a passing grade on the test, the candidate can request the IECB Chair to send a report of the test’s topic areas where the candidate’s performance was weak.

The following percentage breakdown of the clinical topic areas covered by the MCE may be helpful in your preparation for taking the 100 question multiple choice examination:

<table>
<thead>
<tr>
<th>Clinical Topic Areas</th>
<th>% of Questions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visual Information Processing – diagnosis and treatment</td>
<td>23%</td>
</tr>
<tr>
<td>Visual Efficiency/General Skills – diagnosis and treatment</td>
<td>18%</td>
</tr>
<tr>
<td>Strabismus – diagnosis and treatment</td>
<td>18%</td>
</tr>
<tr>
<td>Amblyopia – diagnosis and treatment</td>
<td>10%</td>
</tr>
<tr>
<td>Infant and Preschool Vision Development</td>
<td>10%</td>
</tr>
<tr>
<td>General Vision Therapy Concepts</td>
<td>10%</td>
</tr>
<tr>
<td>Acquired Brain Injury – diagnosis and management</td>
<td>4%</td>
</tr>
<tr>
<td>Special Populations – diagnosis and management</td>
<td>4%</td>
</tr>
<tr>
<td>Disease as it relates to Vision Function</td>
<td>3%</td>
</tr>
</tbody>
</table>

You have two options for taking the MCE:

**Option 1: At an accredited educational institution in your local community.** The test must be taken during the week in June as specified in Appendix B (Fellowship Timeline). You make arrangements with a local college, university, library or learning center to take the exam, and you must supply a qualified proctor. The COVD office will provide you with the requirements and forms that need to be completed to schedule the test administration. If a candidate who uses this option doesn’t pass the MCE, he/she can take it at the COVD Annual Meeting (see Option 2 below) at no additional cost. The candidate must contact the COVD office to arrange taking the test at the Annual Meeting.
Option 2: At the COVD Annual Meeting. The test administration is given on the Monday prior to the beginning of the Annual Meeting.

Step 2: Successful completion of the oral interview

The oral interview is given only at the COVD Annual Meeting. Interviews are scheduled on Monday through Wednesday before the general meeting begins.

The oral interview is conducted by three IECB members in a private setting and typically lasts 30 minutes. During the interview, you will be asked questions primarily relating to the reviewers’ comments you received about your OBQs and Case Reports. Should the reviewers have further questions, an additional interview may be scheduled with two reviewers who were not involved with the first oral interview and the IECB Chair. There is no additional fee for the second oral interview.

There is no score or grade that is determined from the oral interview. Results of the oral interview are used to determine if you have successfully completed the fellowship process.

Step 3: Fellowship Induction

Once you have successfully completed the multiple choice examination and oral interview, you will be invited to participate in the induction of new Fellows during the closing banquet at the COVD Annual Meeting.

4. Phase Three: Maintenance of Certification (MOC) Certification is good for five years. Fellows are required to recertify every five (5) years. You must provide the following to the COVD office, either periodically during the five years, or prior to the expiration of your certification:

- A minimum of seventy-five (75) total continuing education hours averaged over a 5-year period (15 hours/year)
- A current Curriculum Vitae

There is no recertification fee for those who have maintained continuous COVD membership for the five years. For those who are not members or allowed their membership to lapse at any time during the five years, there is a recertification fee.

B. Residents and the Fellowship Process

Residents in vision therapy, pediatric optometry, and visual rehabilitation residency programs at an accredited school or college of optometry or private practice residency have the opportunity to the Fellowship Multiple Choice Examination (MCE). Residents who pass the MCE are given credit for that portion of the Fellowship process. Further,
the requirement for 100 hours of accredited continuing professional education as a requirement for completion of Fellowship is waived. The eligibility requirement of active clinical practice is decreased from three to two years. However, residents must apply to the Fellowship certification program by December 31 of the following year in which the test was taken in order to retain these eligibly credits.

1. Policy

- Our policy is that residents take the test on a voluntary basis

2. MCE Schedule for Residents

- For in-house residencies, the test must be taken at the same date and time by all residents in an appropriate location at your institution. The exam must not be proctored by an optometrist, optometry student, COVD member, healthcare professional or relative of any candidate. This method results in no expense to proctors or the resident.

- For private practice residencies, the test must be taken at the same date and time in an appropriate location at an accredited educational institution or learning center and proctored by an accredited individual who is not an optometrist, optometry student, COVD member, healthcare professional or relative of any candidate. This method might result in an expense that would be you or your resident’s responsibility.

- The exam must be given at a date and time of your choosing, during the assigned week of the year, typically in June. Contact the IECB at the International Office for the assigned week or review on the timeline for the year of which you are testing.

3. Successful completion of the MCE

- The written examination must be conducted at an accredited educational institution or testing facility (i.e: Sylvan Learning Center, Library) by a qualified proctor. The proctor may not be an optometrist, optometry student, COVD member, healthcare professional or relative of any candidate. You have the option of selecting the site and arranging the proctor. Any costs related to taking the test at a local site administered by a proctor are your responsibility and not covered by COVD.

1. Select a Local Site (this step may be completed by the Residency Director):

Contact your local educational institution or testing facility to determine if they can arrange for a qualified proctor to administer the written examination to you. The proctor may not be an optometrist, optometry student, COVD member,
healthcare professional or relative of any candidate. You may select the time you wish take the exam.

2. **Register for the Written Examination**

   Once the local site and proctor have been selected, complete the Written Examination Registration Form for Residents and email to [Katie@covd.org](mailto:Katie@covd.org) or fax to the COVD International Office at 330-995-0719.

3. **Take the Written Examination**

   All testing materials and information will be sent directly to the proctor prior to the test date. You will need to have photo identification for verification by the proctor. You will not be allowed to bring any materials, notes, books, food, drink, calculators, computers or phones into the examination room. Bring with you several #2 pencils for use in completing the examination score sheet. The proctor will open the sealed envelope containing the examination your presence and will provide instructions and answer any questions you may have about completing the answer sheet. You will have up to 3 hours to complete the examination.

C. **Learning Objectives and Study Outline**

   The Fellowship process is designed to help you expand your knowledge base in all aspects of behavioral vision care. Advanced competency is expected in the following principles and procedures for each clinical condition. The first phase of your fellowship process will help you obtain and articulate a deeper understanding of these concepts. The examination phase will further explore your understanding of these clinical issues.

   1. **Principles and Procedures** – You should be able to define and explain:

      a. The unique qualities, scientific, and clinical principles of each clinical condition.

      b. The epidemiological and demographic characteristics of each clinical condition.

      c. The characteristic history, signs and symptoms for each clinical condition.

      d. How to assess each clinical condition, including specific test protocols and their interpretation.

      e. The differential diagnosis for each clinical condition.

      f. The specific treatment and management of each clinical condition including:

         1) Prognostic indicators
         2) Treatment options
         3) Duration and frequency of treatment
         4) Treatment philosophy and goals
5) Specific lens treatment and therapy procedures including rationale for treatment
6) Ergonomics and visual hygiene
7) Outcomes to determine successful completion of treatment
8) Frequency of follow-up care and patient instructions
9) Referral criteria (medical, neurological, educational, etc.)

2. Clinical Conditions

a. Strabismus and Amblyopia

1) Amblyopia
   a) Anisometropic / Isometropic Refractive Amblyopia
   b) Strabismic Amblyopia
   c) Hysterical Amblyopia
   d) Form Deprivation Amblyopia
   e) Differential diagnoses in childhood visual acuity loss

2) Strabismus
   a) Esotropia
      i. Infantile
      ii. Accommodative
      iii. Acquired
      iv. Microtropia
      v. Sensory
      vi. Convergence Excess
      vii. Divergence Insufficiency
      viii. Non-accommodative
      ix. Sensory Adaptations
   b) Exotropia
      i. Divergence Excess
      ii. Convergence Insufficiency
      iii. Basic Exotropia
      iv. Congenital
      v. Sensory
   c) Vertical Deviations
   d) Noncomitant Deviations (AV Syndrome; Duane’s Retraction Syndrome; Brown’s Syndrome; III, IV, VI nerve palsy, etc.)
   e) Differential diagnoses in strabismus

3) Special clinical considerations
   a) Anomalous Correspondence
   b) Eccentric Fixation
   c) Suppression
   d) Motor Ranges
   e) Stereopsis
   f) Horror fusionalis/intractable diplopia

b. Growth and Development
1) Visual
   a) Infant vision (normal and abnormal ranges of refractive status in infant, toddler, and preschool populations)
   b) Acuity / Binocularity / Stereopsis / Accommodation
   c) Neurological / Cognitive / Behavioral
   d) Developmental milestones
   e) Piaget stages of development

c. Perception and Information Processing
   1) Neurological / Psychological
      a) Ambient / focal systems.
      b) Visual perceptual midline
      c) Parvo cellular / Magno cellular function
      d) Perceptual Style (central, peripheral)
      e) Impact of colored filters
      f) Attention

   2) Intersensory and Sensorimotor Integration
      a) Visual-auditory
      b) Visual-vestibular
      c) Visual-oral
      d) Visual-motor
      e) Visual-tactual

   3) Performance indicators
      a) Laterality and directionality
      b) Visual requirements for academic success
      c) Bilaterality
      d) Gross and fine motor ability
      e) Form perception/visual analysis
      f) Spatial awareness
      g) Visualization
      h) Visual memory
      i) Visual sequential memory
      j) Form constancy
      k) Visual speed and visual span
      l) Visual sequencing

d. Refractive conditions and visual skills
   1) Refractive Conditions
      a) Developmental influence on refraction & emmetropization
      b) Aniseikonia
      c) Myopia
      d) Astigmatism
      e) Hyperopia

   2) Ocular Motor Function
      a) Eye movements and reading
      b) Pursuit dysfunctions
c) Nystagmus
d) Saccadic Dysfunctions

3) Accommodation
   a) Role in myopia development
   b) Role in computer-related asthenopia

4) Fusion in Non-Strabismic Conditions
   a) Fixation disparity
   b) Motor fusion
   c) Sensory fusion

e. Special clinical conditions
   1) Acquired brain injury (traumatic brain injury {TBI} and stroke)
   2) Developmental disabilities (Down Syndrome, Developmental delay, etc.)
   3) Visually induced balance disorders
   4) Motor disabilities (Cerebral Palsy, ataxia, etc.)
   5) Behavioral disorders
   6) Autism spectrum disorders
   7) ADD / ADHD
   8) Dyslexia and specific reading disabilities
   9) Learning Disabilities
   10) Computer Vision Syndrome

3. Vision Therapy Concepts to Consider
   a. Peripheral awareness: focal / ambient roles
   b. Significant findings which are good or poor prognostic indicators of vision therapy and lens application
   c. Development, rehabilitation, prevention, enhancement
   d. Behavioral lens application
   e. Yoked prism rationale for treatment and application
   f. The relationship between the visual and vestibular systems
   g. SILO/SOLI
   h. Visual stress and its impact on the visual system
   i. Role of posture in vision development, comfort and performance
   j. Disruptive therapy: Discuss this type of therapy and how it can be used as a clinical therapeutic tool.
   k. Relationship of speech-auditory to vision
   l. How might television, reading, video gaming, restricted movement, computer work, nutrition, etc., impact vision?
   m. Perceptual Style, e.g., spatial/temporal, central/peripheral

III. Open Book Questions

The Open Book Questions (OBQ’s) are designed to provide a vehicle through which you communicate your knowledge in the areas of vision development, binocular vision, visual information processing and vision therapy. While vision is a process that involves the integration
of all aspects of the visual as well as other sensory systems, certain questions may ask you to isolate one or more aspects of vision in order to evaluate your expertise in this particular area. Candidates must be able to explain their answers in developmental and behavioral rationale for the testing and treatment being described.

It is appropriate to use the words or concepts of others in your answers. However, it is important to clearly state how you apply these words or concepts in your clinical activities.

It is recommended that in addition to the publications listed in the Recommended Study References (Appendix E), the appropriate American Optometric Association’s (AOA) Clinical Practice Guidelines be utilized as sources for the below open book questions. The AOA’s publications are available at no cost for AOA members at http://www.aoa.org/x4816.xml. Hard copies for non-members can be ordered directly from the AOA.

If you do not successfully complete an OBQ, the IECB Chair will inform you by letter and include the comments from the candidate’s IECB review team that must be addressed. The letter additionally contains the format the candidate must use in addressing the comments. The candidate should also indicate the number of the revision at the top of each page, (Revision #1, Revision #2.)

Before preparing your answers to the following OBQs, thoroughly read Format, Submission, and Review Guidelines for Open Book Questions (OBQs) and Case Reports that starts on page 4.

**Open Book Questions:**

1. From a developmental and behavioral perspective, discuss tests and treatment related to accommodative abnormalities. This may include: accommodative insufficiency, infacility, lack of sustainability, and excess. Discuss how you decide if lenses, prisms and/or vision therapy are indicated and outline your treatment plan.

2. From a developmental and behavioral perspective, discuss tests and treatment related to non-strabismic binocular abnormalities. These conditions may include: convergence insufficiency, convergence excess, divergence insufficiency, divergence excess, and vertical deviations. Discuss how you decide if lenses, prisms, and/or vision therapy are indicated and outline your treatment plan.

3. From a developmental and behavioral perspective discuss tests and treatment related to strabismus and amblyopia. These tests should include; but not be limited to, evaluation of anomalous correspondence and eccentric fixation. Discuss your treatment modalities for strabismus and amblyopia including occlusion/penalization therapy. Describe how these tests help you decide which treatment is indicated including referral, lenses, prisms and/or vision therapy and outline your treatment plan.

4. Explain how developmental milestones can impact visual information processing and behavior relative to academic performance.
5. Discuss the application of lenses and prisms beyond refractive and prismatic compensation. Include the influence of lenses and prisms on visual stress, visual behavior, visual development, and in vision therapy/rehabilitation.

6. Describe your model of vision and how it was derived. Include in it your definition of vision and how vision influences a person’s development and behavior.

IV. Case Reports

Before preparing your case reports, thoroughly read Format, Submission, and Review Guidelines for Open Book Questions (OBQs) and Case Reports that starts on page 14.

If you have questions about the appropriateness of a case you have selected, please talk to your mentor and if there are still questions, contact the IECB Chair for guidance. The cases you select must be at a stage where treatment is complete, and not be in active progress. All clinical findings must be included to support the diagnoses, treatments, and follow-up care. If the outcomes were not optimal, the self critique must indicate how they could have been improved. (See Appendix F for a Sample Case Study Report).

A. Case Report Topics:

1. Learning Related Visual Perceptual/Visual Information Processing Deficits: The report must show that the patient has deficits in one or more of the areas of visual perceptual/visual information processing that impact the patient’s behavioral development and learning abilities. The deficits must be determined by standardized testing of one or more of these areas. Additionally, but not in lieu of standardized testing, non-standardized measures can be used, such as observation of various patient behaviors and performance. Clearly indicate how your optometric vision therapy addresses these deficits. A case where the patient’s deficits that impact learning are primarily because of anomalies of pursuit and/or saccadic eye movements, and/or accommodation, and/or strabismus and/or non-strabismic binocular anomalies, will not be accepted.

2. Strabismus: The report must include the findings of a thorough strabismic diagnostic protocol and a detailed description of the optometric vision therapy that was conducted. The patients’ strabismus must be constant at all times and at all distances; any instance where there is intermittency of the eye turn is not acceptable (a centration point may be present). Further, the report of a patient whose strabismus resolves as the result of compensatory lenses, such as a fully compensated accommodative esotropia, or the use of minus lenses to induce accommodative convergence in a case of exotropia, is also not acceptable. The patient may or may not have an accompanying amblyopia. It is preferable that the treatment has resulted in improved cosmesis (reduced amplitude or frequency) and/or in sensory or motor status. However, if no such improvements were evident, the critique must address the factors that precluded such improvements, and/or what vision therapy or other management measures could
have been taken. Include the aspects of the development and behavior that you consider important with this patient.

3. **Lens Treatment** (Non-compensatory): The case should specify the diagnosis(es) and the use of lenses, prisms, filters, and/or sector occlusion with no active vision therapy as the treatment. Include a discussion of how the treatment impacted the patient’s visual stress, visual behavior and visual development.

**B. Content of Case Reports**

All case reports must contain the following sections (your final draft must address all ten of the content headings listed below. Please limit to no more than 15 pages double-spaced:

1. **Type of Case**: (i.e., Learning-related, Strabismus/Amblyopia, or Lens Treatment) noted on top of each page.

2. **History**: Patient initials (do not use patient’s name on any materials); entering complaint; signs and symptoms; onset, frequency and severity of symptoms; significant developmental and educational history; brief summary of previous evaluations; pertinent family eye and medical history; patient’s medical history and medications.

3. **Diagnostic Data**: List all tests by name. List results and observations (quantitative & qualitative). Tests should rule out and define problems.

4. **Diagnosis or Diagnoses**: Diagnosis should be supported by history, test results, and observations. Relevant interpretation of the data should also be included.

5. **Prognosis**: The patient’s and doctor’s goals should be listed. Also, the prognosis for reaching the goals should be provided.

6. **Treatment**: Lenses and prisms initially prescribed & rationale; summarize therapeutic procedures including order of implementation and purpose of procedures chosen; frequency of visits; duration of treatment; progress evaluations and resulting changes in therapy Process.

7. **Outcome of Case**: Results of treatment; impressions of results; whether patient’s goals and doctor’s goals were met; and changes in performance.

8. **Follow-Up Care**: Disposition of case with results; future considerations; final prognosis; subsequent care.

9. **Critique**:
   (A) Are there any general or specific items in this case that did not make sense?
   (B) Are there any additional tests that, in hindsight, you might have performed during the original or progress evaluation(s)?
   (C) Are there any therapeutic techniques you wish you had, in hindsight, utilized?
(D) Who was more satisfied with the outcome; doctor, patient or patient’s family?
(E) What would you have done differently? What did you learn?

10. Submit a copy of a typed report you have sent to another health care or related professional as an example of your office communication concerning one of your three cases. (Be sure to delete your patient’s name as well as your own.)

If you do not successfully complete a Case Report, the IECB Chair will inform you by letter and include the comments from the candidate’s IECB review team that must be addressed. The letter additionally contains the format the candidate must use in addressing the comments. The candidate should also indicate the number of the revision at the top of each page, (Revision #1, Revision #2.)

C. Substitution of Published Case Reports and Honesty Policy
You may substitute published case reports for the required written case reports if the case report was 1) published in a refereed journal, 2) you were the first author, and 3) it is a direct substitute for the required case report (e.g., a published case report on the management of an exotropic patient, which included vision therapy as a component of the plan, could substitute for the required case report on strabismus or amblyopia). The IECB will decide whether or not a published case report is acceptable and meets the substitution requirements. The review committee may ask for a supplement to the published case report to clarify certain aspects of the case (e.g., more detail of the office and home therapy Process might be necessary.)

Honesty Policy: A candidate is expected to be the author of all Case Reports and answers to Open Book Questions work he/she submits. By seeking credit or recognition for work that is not his/her own, a candidate engages in an act of dishonesty that is a serious offense in a professional community. There are two kinds of dishonesty: cheating and plagiarism. Cheating includes giving or receiving assistance on an examination or assignment in a way not specifically permitted. Plagiarism includes the use of another's scholarship, words, ideas, or artistic product without proper citation or acknowledgment. In all written work, the standard guide for citation or acknowledgment will be The Publication Manual of the American Psychological Association.

Although you must document those you quote, the quote will not be accepted as representing what you think. You must follow a citation with your own thoughts or conclusions and how you apply them clinically.

V. Format, Submission, and Review Guidelines for Open Book Questions (OBQs) and Case Reports

1. It is your responsibility to follow the Fellowship Timeline (Appendix B) and submit all materials, forms, and fees prior to or on the deadline date. No exceptions are made for missed deadlines if the candidate seeks to complete the process during that year.

2. All submissions must be sent via email to cert@covd.org and must be written in English.
3. All OBQs and Case Report submissions must use the following format:
   a. A cover page must be sent as a separate file with your first submission. It must contain the following: your name, address, telephone number, email, and your candidate number. If any information contained on the cover page changes during process, you will need to resubmit your material with the changes. (See Appendix G for Sample Cover Page.)
   b. Submissions must be typed using 12-point font, double-spaced, in Microsoft Word (.doc) format.
   c. Header: List the assigned candidate number in the header of each page in the header.
   d. Footer: Insert document type and page numbers in footer of document (Example: OBQ #1, page 1 of 5—or- Case Report [name of case type], page 1 of 15).
   e. OBQs
      i. Each response should be no less than one page and no more than five pages, double spaced.
      ii. At top of first page, type OBQ #__ and type the question in its entirety.
   f. Case Reports
      i. No more than 15 pages, double spaced.
      ii. At top of first page, list the Type of Case (i.e., Learning Related Vision Problem, Strabismus or Amblyopia, or Lens Treatment)
   g. Copies of forms, letters, and reports may be scanned and sent separately as Adobe (.pdf) files. When including a copy of a form, letter, or report on your letterhead, delete or black out any information that identifies you as the doctor.

4. Write in a clear and concise manner and proofread your materials carefully. Remember to use the spell check.

5. Record the numerical findings and pertinent patient’s behavioral changes of all your clinical tests.

6. Use standard optometric terminology. Reviewers may not understand your clinical “shorthand” or conventions.

7. Photocopies of VT work-ups, chart/file notes are not acceptable.

8. Do not assume that the reviewers know what you are thinking. Please explain your answers and comments in detail, especially with regard to your rationale for diagnosis.
and management decisions.

9. Each OBQ and Case Report must be submitted as a separate file. Files submitted which contain more than one OBQ or Case Report will not be processed.

10. Mentors must read your OBQ answers and Case Reports prior to any submission. They must send an email to cert@covid.org stating that they have reviewed and approved your submission(s). The mentor must list the specific OBQ# or Case Report title being submitted.

11. You may submit these materials in one complete packet or as you complete them. They may be submitted at any time. If you plan on completing the process in a specific year you must adhere to the FCOVD timeline for that specific year.
-Appendix A-

COVD Fellowship Process Application

Name_________________________________________________________

Address (Office) ________________________________________________

City _________________________ State/Country __________ Postal Code __________

Phone (Office)_____________________________ (Home)___________________________

Email: _________________________________________________________

Optometry School ___________________________ Year Graduated __________

CURRICULUM VITAE: A current Curriculum Vitae including professional activities, lectures, research, published papers, memberships and offices held in professional organizations (optometric and non-optometric) must be submitted with this application.

I understand that acceptance of this application for the Fellowship Program begins my four year enrollment period. I hereby warrant that I am currently licensed and in good standing in the state/country in which I practice and that I am currently practicing vision development testing and therapy.

I grant permission to the COVD International Examination & Certification Board to communicate with the person selected to be my mentor in order to provide him or her with information about my progress in the Fellowship process.

I acknowledge that it is the exclusive right of the COVD International Examination & Certification Board (IECB) to evaluate any and all materials submitted or gathered in the course of the Fellowship process. I further acknowledge that it is the exclusive right of the College to decide whether this information meets the qualifications for Fellowship.

☐ By initialing this box, I confirm that it is my responsibility to follow the Fellowship Timeline and submit all materials, forms, and fees prior to or on the deadline date. I understand there are absolutely no exceptions made for missed deadlines.

Signature _______________ Date _______________
Application payment must be submitted with application. *If payment was made online, please include a receipt with your application submission.*

FCOVD Fee: _____ $300.00 COVD Member  _____ $415.00 Non-Member

Candidate Name: ________________________________________________

Method of Payment:

  _____ Check  _____ American Express  _____ Discover  _____ MasterCard  _____ Visa

If paying by check: Payment must be drawn on a U.S. bank, in U.S. funds. Make payable to COVD.

If paying by credit card:

2017 Timeline for Fellow Candidates

Once you have applied for Fellowship, you have up to four years to complete the certification process. Candidates, whose primary language is not English, may request a two-year extension to complete the process. If you plan to take the Multiple Choice Examination and Oral Interview in 2017, you must adhere to the following deadlines. 47th Annual Meeting will be held April, 2017 in Jacksonville, Florida.

PLEASE NOTE:
Responses to Open Book Questions and Case Reports must be sent electronically to the COVD International Examination and Certification Board (IECB) Credentialing Director at: cert@covd.org. Normal review process may take six weeks. If the reviewers request more information (revisions), an additional six weeks may be needed to complete the review process. Please plan submissions accordingly.

June 24, 2016 Three or more Open Book Questions due. Signed Guided Study Form and Payment due.

August 5, 2016 Remaining Open Book Questions due

September 23, 2016 All Case Reports due

**Revision Policy**
If revisions are requested, you must reply to the reviewers’ comments and questions no later than two weeks from the date of the IECB Chair’s letter if you plan to complete the process this year.

In order to take the Multiple Choice Examination (MCE) and Oral Interview, a candidate must have successfully completed all the Open Book Questions and Case Reports. Once completed, you will be notified of the requirements and fees for scheduling the MCE and Oral Interview.

December 2, 2016 Registration for January MCE due. *to register all OBQ’s and Case Reports must be complete.*

January 8-12, 2017 Candidates taking MCE prior to Annual Meeting must take it during the assigned week at a location of your choosing. **Test for RESIDENTS ONLY will be administered in June.**

February 16, 2017 All final Open Book Questions and Case Report revisions must be completed to qualify for taking MCE and Oral Interview at the Annual Meeting in 2017. Oral Interview scheduling begins.

April 23, 2017 Multiple Choice Examination for candidates taking exam on-site or retaking exam at COVD 47th Annual Meeting in Jacksonville, Florida

April 24-25, 2017 Oral Interview conducted at the COVD 47th Annual Meeting, in Jacksonville, Florida.

Fellowship Recommended Study References

The primary resource for writing your responses to the OBQ’s and your cases should be your clinical experience. Your writing should not reflect your expertise in quoting back passages from various references. However, you and your mentor may feel that you may benefit from consultation of some of the following reference materials in broadening your foundation in particular areas. Once you have consulted those specifically mentor-suggested materials and discussed the relevance of that material with your mentor, you may find your approach to your written work taking on a more solid approach. The following list of material is only meant as a potential guide for the material you may find helpful in building your knowledge base.

Study materials can be downloaded at the following link on the COVD website:

Sample Case Study Report

The following sample report is provided as an example to assist you in preparing your reports.

Case Report #2: Strabismus

History:
M.J., an 18 year-old college student, was referred by a local optometrist for a strabismus evaluation and possible therapy. Her history was significant for a moderate turn in the left eye and mild amblyopia. Her main complaint related to asthenopia associated with reading and computer use. On rare instances she was aware of a momentary diplopia. Prior ophthalmologic exams resulted in her parents being told that her vision was good and that the turn was relatively small. No treatment, including glasses, was ever recommended. Since entering college M.J. reported increased visual discomfort due to the amount of reading and computer work required of her. Her health was excellent, with no medications used, and her family’s ocular and medical histories were unremarkable.

Clinical findings:

1. Unaided V.A. was O.D. 20/20, O.S. 20/25-3. At near the O.D. was 20/20 reduced Snellen and 20/30 – O.S., reduced Snellen. The O.S. V.A. through a 2.2x Telescope was 20/20+1

2. Unilateral and alternate cover testing at distance, 12^ O.S. Esotropia and 15^ O.S. Esotropia at 16”. A repeat of the unilateral cover test at 16” wearing +2.50 sph. O.U. resulted in the esotropia reducing from 15^ to 10^ O.S. Esotropia.

3. An unstable centration point was noted at 2” (confirmed by a worth 4 dot test and repeat cover testing) A centration range, extending from 2” out to 5” was noted, beyond which the O.S. suppressed.

4. Motilities were unrestricted, although the O.S. exhibited occasional loss of fixation and periodic “jerky” movements (Maples standards)

5. In the distance, with a +5.00 fogging lens on the right eye, a spontaneous uncrossed (normal correspondence) diplopia was reported.

6. Refraction (dry) O.D. +.75 sph =20/20, O.S. +1.00 sph =20/25-2

7. Distance phoria (with dry refraction prescription in place) yielded an O.S. suppression laterally and vertically.
8. MEM lag = +1.50 O.D., O.S.
9. Cross cylinder =1.00 add O.D., O.S.
10. Near phorias (with + 2.50 sph O.U.)- intermittent diplopia with unstable fusion at 10° BO O.S.
11. Amps. O.D. 9 O.S. 2 inches
12. Visuscopy unsteady central O.S.
13. Randot Stereopsis no response, Wirt Rings with +2.00 sph. O.U. M.J. perceived ring# 1 correctly, Quoits testing at 6” (through +2.00 sph.) M.J. showed some binocular integration from 2” out to 6”. Beyond that distance her performance deteriorated.
14. Bagolini lenses- intermittent O.S. suppression with +2.00 sph OU... The response on Bagolini lenses was consistent with normal correspondence
15. The referring doctor reported that ocular health was negative. His cycloplegic examination did not reveal hyperopia of a greater degree than was evident in my dry refraction.

**Diagnosis:**

1) Constant, moderate O.S. Esotropia
2) Partly accommodative O.S. esotropia
3) Shallow O.S. strabismic amblyopia
4) Normal Correspondence
5) Accommodative insufficiency
6) Unsteady O.S. direct foveal fixation

**Prognosis and goals:**

M.J.’s prognosis for improving the O.S.V.A., making near vision activities more comfortable and establishing some binocularity was good. I explained my goals for therapy, (which included developing binocular vision) and M.J. and her parents felt that these were desirable goals. The patient was scheduled for 12 weeks of therapy followed by a reevaluation on week 13. She was advised that therapy might extend to 25 or 30 visits. M.J. indicated that she would be returning to school at the end of her summer break and could only come for approximately 14 sessions. Twice weekly, therapy was not possible due to financial constraints.
Treatment

Phase one- I asked the referring doctor to provide M.J. with the follow Rx:
O.D. +0.75 sph, O.S. +1.00 sph with a +1.00 add OU in progressive form.

The patient was advised to use this Rx as much as possible. M.J. wore the Rx full time for 2
weeks prior to starting vision therapy (VT). At the first visit a circular piece of translucent tape
was placed on the O.D. lens to cover the visible iris area. This was intended to eliminate the
need for occlusion and to encourage peripheral binocularity. Office and home VT initially
stressed R/G T.V. trainer, Jensen Rock to improve O.S. accommodation, Monocular
Accommodative Rock(O.S.) with +/- 1.50 lenses, near-far rock, and the Brock’s “streak”
technique to reinforce Normal Correspondence (N.C.) and simultaneous awareness. I also loaned
M.J. a pair of training glasses (+2.00 sph. O.U.) to wear while doing the pointer and straw
technique.

At 10 weeks of VT, cover testing at distance was 10^ O.S. Esotropia and 8^O.S. Esotropia
through the add at near. The centration range now extended out to 10” through the add.

At this point I added the Brock string technique with cover/uncover of the O.D. I also gave M.J.
a red clip on lens to wear over the O.D. training rx 2 hours daily for antisuppression.

At 13 weeks, I removed the right translucent tape and placed binasal tapes on both lenses. VT
now stressed physiological diplopia, prism reader (with red lens on the O.S.) to maintain
simultaneous vision. Binocular Accommodative Rock (B.A.R.) with suppression controls was
also started.

The O.S. VA was now 20/20-2 at distance and 20/25 reduced Snellen at near through the add. At
this time M.J. indicated that reading was much more comfortable. She reported an occasional
momentary diplopia when she removed her glasses at night. Since she would be returning to
school shortly, I did a fixation disparity test. Her responses varied between O.S. suppression and
an eso “slip” which was neutralized with 8^BO. With an 8^BO before the O.S., M.J. felt that she
was using both eyes more easily. I indicated to the patient that a prescription with the prism ground in could be obtained if necessary.

Vergence ranges at this time were as follows:
At distance that BO vergence findings were x/2/-6.
At “16” through +2.00 DS, OU, BI vergence findings were x/8/-10

M.J. returned to school with instructions to continue her home vision therapy and to wear the prescription full time if possible.

When she returned home for her Christmas break she indicated that she had been doing as much home VT as her school schedule allowed. She continued to be asymptomatic with her reading and computer activities.

Her status at this time was as follows: Cover test distance with RX worn= 6^→8^ left Esotropia. with an occasional intermittent movement noted. At near through the add she exhibited a 5^ to 6^ intermittent left Esotropia. Her amps were now OD=9D and OS= 5D. I indicated to M.J. that since she would be home for 5 weeks additional office V.T. would be beneficial. The patient declined any additional office VT citing ongoing family financial constraints and the fact that she was quite comfortable doing all near point activities. A follow up was scheduled when she returned for her summer break.

**Self critique**

The prescription and VT addressed the patient’s asthenopic symptoms and her occasional diplopia, and made her essentially asymptomatic. I would have liked to continue VT to further improve binocularity with and without her prescription.

In reviewing my treatment plan, I could have initially done more monocular OS therapy stressing motilities, accommodative amplitude, hand eye coordination and fixation stability. However, given the patient’s time and financial constraints and her increased comfort level the case worked out well.
Sample Cover Page

A cover page must be sent as a separate file with your first submission. If any information contained on cover page changes during process then you will need to resubmit with changes.

International Examination and Certification Board

Guidelines for Candidates with Disabilities

The International Examination and Certification Board (IECB) of the College of Optometrists in Vision Development, an organization that certifies professionals who specialize in the rehabilitation of individuals with visual disabilities, recognizes its’ role in the implementation of the Americans with Disabilities Act (ADA) as amended. The following are guidelines for candidates with disabilities who are applying for test accommodations under the ADA as amended:

- The candidate must inform the IECB of the request in writing, using the Request for Accommodation form. Please note that this request must have attached documentation from a qualified evaluator (a physician, psychologist, or optometrist) that demonstrates your disability. Please give your evaluator the Guidelines for Documentation of Disabilities to ensure that the IECB has the documentation it needs to comply with the law and to avoid delays in processing your request.

- Please remember to include a personal statement with your form. This personal statement should describe how your disability significantly affects your activities of daily living.

- Send your Request for Accommodation form, with the personal statement and the evaluator’s documentation attached, within 60 days after submission of your Fellowship or COVT Application, to the College of Optometrists in Vision Development, 215 W. Garfield Rd., Ste. 200, Aurora, OH 44202.

- Each request is reviewed and evaluated on an individual basis.

- When the IECB determines that accommodation of your disability is appropriate, they will work with you to determine how best to accommodate your disability for each phase of the examination and certification process.

If you have questions about this process, contact the COVD office at cert@covd.org or phone 330-995-0718).

Information to follow:

Guidelines for Documentation of Disabilities

Request for Accommodations Form
Guidelines for Documentation of Disabilities

The following are guidelines adopted by the COVD International Examination and Certification Board (IECB) for documentation of disabilities for candidates who are applying for test accommodations under the ADA as amended:

- The evaluator must be qualified to conduct the necessary assessments and make the relevant diagnosis or diagnoses. For learning disabilities, this should be a licensed psychologist or psychiatrist who has additional training and experience in the assessment of learning problems in adolescents and adults. For attention disorders, the evaluator should be a licensed psychologist or psychiatrist who has additional training and experience in the assessment of attentional difficulties and the diagnosis of ADHD in adolescents and adults. For physical disabilities, the evaluator should be a physician who has the appropriate training in the relevant specialty area. For vision or hearing disabilities, the evaluator should be an optometrist, ophthalmologist, or audiologist.

- The documentation must be current. Because appropriate accommodations can only be determined based on information about the current impact of the disability on activities of daily living, it is in the candidate’s best interest that the information about the impairment be current. Therefore, testing should have been done within the past three years, and occasionally within the last year.

- The documentation must contain the following information:
  - The date of the evaluation;
  - Relevant educational, developmental, and medical history;
  - History of prior accommodation, or rationale for lack of prior accommodation;
  - The tests used to arrive at the diagnosis and the data from these tests;
  - A specific diagnosis or diagnoses that causes impairment, including detailed interpretation of the data and how alternative diagnoses were ruled out, especially in the case of learning disabilities or ADHD;
  - Suggestions for appropriate specific accommodation of the disability;
  - A statement of the qualifications of the evaluator.

- This documentation must be typewritten on the evaluator’s letterhead and signed by the evaluator.
Request for Accommodations

Please provide the following information to the International Examination and Certification Board (IECB) of the College of Optometrists in Vision Development to document your request for accommodations under the ADA during the Fellowship or Certified Optometric Vision Therapist certification process:

Name

last first middle initial

Gender

☒ male ☐ female

Address

street

city state/province ZIP/postal code
daytime phone number e-mail address

Nature of disability

learning impairment: ☐ reading disability ☐ writing disability

language impairment: ☐ receptive language disorder ☐ expressive language disorder ☐ mixed or other language disorder

mental health impairment: ☐ attention deficit/hyperactivity disorder ☐ anxiety disorder ☐ other mental health disorder

sensory impairment: ☐ visual disability ☐ hearing disability

each physical impairment: ☐ mobility disorder ☐ neurological disorder ☐ other physical impairment

Accommodation requested (not intended to be a comprehensive list of available accommodations)

☒ extended time on written examination ☐ separate room for written examination

☒ extra breaks during written examination

☒ accommodation during oral examination (please describe) ______________________________________________

☒ other accommodation (please describe) _____________________________________________________________

History of prior accommodation (please check when accommodations were received and describe in your personal statement)

☒ none ☐ optometry school ☐ undergraduate ☐ secondary ☐ elementary

Authorization

I certify that the above and all additional information supplied is true and accurate. I authorize the International Examination & Certification Board of the College of Optometrists in Vision Development to contact the evaluating professional(s) who submitted the attached documentation, or will send documentation under separate cover, of my disability for confirmation, clarification, or further information. I also hereby authorize those professionals to provide the IECB with such information as is necessary to determine the level of disability and appropriate accommodations.

Signature _____________________________ Date ______________________

Send completed form to: College of Optometrists in Vision Development, 215 W. Garfield Rd., Ste 200, Aurora, OH 44202 or email to: cert@covd.org, or fax to: 330-995-0719
Candidate Appeals Policy

The goal of this policy is two-fold:

1. Resolution of candidate’s concerns to the satisfaction of both the candidate and IECB.
2. Maintenance of candidate confidentiality throughout the process.

When a candidate for Fellowship or COVT has concerns regarding his/her equity of treatment during the certification process, that person will inform the IECB Chair in writing of the concerns. The following procedure will then be followed:

1. The IECB Chair will convene a group of three Fellows, at least one being a former IECB member, and all of who are acceptable to the candidate. These fellows (the group) will sign the IECB Confidentiality Form.

2. The group will be given access to all pertinent written material and given voice or electronic access to the involved IECB members and the candidate.

3. The group will take no more than three weeks to decide on the validity of the candidate’s concerns. They will compose a document that states the reasons for their majority or unanimous decision and forward it to the IECB Chair. The Chair will take appropriate action, and send the group’s document to the candidate.

The candidate’s signature below indicates that he/she was informed of, and understands the IECB’s Appeals Process.

Candidate Signature:__________________________________________________________
