Energy Outlook Improves.....	3
Post-Harvey Job Growth.....	4
Snapshot — Key Economic Indicators	5

Editor's Note: What follows is a summary of the Greater Houston Partnership's '18 employment forecast released on December 8, 2017. For the full forecast, along with Houston Economic Highlights, an analysis of economic and demographic trends over the past 10 years, see www.houston.org/economy.

JOB GROWTH TO PICK UP IN '18

The Partnership's employment forecast for this year calls for the region to create approximately 45,500 jobs. Growth will be driven primarily by the strength of the U.S. and global economies and Houston's links to them. While turmoil in the energy industry has for the most part subsided, the forecast doesn't anticipate the sector contributing to job growth in '18, but neither does it detract from overall expansion. Only two sectors, construction and information, are forecast to finish the year with fewer jobs than they started with. All remaining sectors are expected to expand, some robustly, others modestly, in '18.

U.S. GROWTH

Though Houstonians often hate to admit it, Texas *is* part of the U.S., and when the nation prospers, that's good for Houston. Why? Because the nation buys more of what Houston sells. A few examples:

- Detroit produced more than 18 million light-duty automobiles and trucks in '16. A typical family car contains 150 pounds of rubber, 200 pounds of fluids, and 250 pounds of plastics. These components likely

come from the plastics and chemical plants along the Houston Ship Channel.

- The value of U.S. manufacturing output exceeded \$6.1 trillion in '14, and more than 6.2 trillion cubic feet of natural gas was consumed in the process. Much of that gas is found, produced and delivered by companies based in Houston.
- Americans drove more than 3.2 trillion miles in '16. One-fourth of the nation's refining capacity is located on the Texas Gulf Coast.

The consensus among economists is that U.S. GDP, adjusted for inflation, will grow 2.4 percent or more in '18, and that's good for Houston.

GLOBAL TIES

Global trade is important to Houston because the region's international ties are as strong as its domestic ties.

- Metro Houston ranks second only to New York in value of exports.
- Nearly 5,000 Houston-area companies are engaged in global commerce.
- Global trade supports nearly 450,000 jobs in the region.
- The Port of Houston ranks first in the U.S. in foreign tonnage.
- Many of Houston's public companies derive a significant portion of their revenues from their overseas operations. The average is 30 percent, but companies such as Halliburton and Oceaneering receive more than half their revenues from international sales and operations.

Oxford Economics forecasts world GDP to grow 3.0 percent in '18, and that's good for Houston.

ENERGY

Approximately one-third of Houston's GDP is tied directly to oil and gas. This figure doesn't include energy's impact on wholesale trade, transportation, and professional services. Nor does it account for the spending of energy

workers at the grocers, in local restaurants or at the drug store. Factor in those expenditures, and energy's impact on local GDP is significantly higher. The U.S. Energy Information Administration (EIA) forecasts West Texas Intermediate to trade on the spot market in the low \$50s most of the year, not reaching the mid-\$50s until Q4/18. That's not much improvement over '17, when crude averaged \$49 per barrel much of the year. Houston needs oil at \$60 or better for several quarters if the energy sector is to spur additional economic growth for Houston.

The forecast is based on several assumptions:

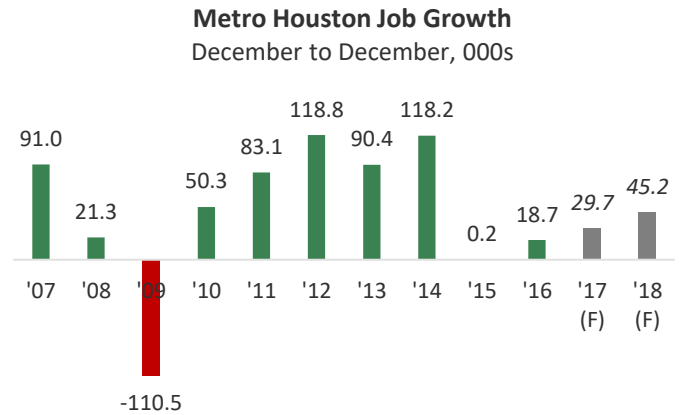

- U.S. GDP grows 2.4 percent or more, adjusted for inflation.
- U.S. job creation averages 200,000 jobs per month, sustaining domestic demand for what Houston produces.
- Any unrest in oil-exporting countries has a minimal impact on prices.
- The Federal Reserve's increases in interest rates have no detrimental effect on the economy.
- The global economy grows at its current pace or better.
- The ongoing political turmoil in Washington has minimal impact, if any, on business or consumer confidence.
- Any appreciation in the dollar against other currencies has a negligible impact on exports.
- The price of WTI generally holds above \$50 per barrel, and any dip below \$50 proves transitory.
- Houston continues to attract residents from other cities, states and countries.

If any of these assumptions prove wrong, the Partnership's forecast would need to be revisited.

FORECAST IN A NUTSHELL

The Partnership's forecast calls for job growth in 14 sectors: oil field services, manufacturing, wholesale trade, retail trade, finance and insurance, real estate, business, professional and technical services, educational services, health care, administrative services, arts and entertainment, accommodation and food services, other services, and government. Job losses will continue in two sectors:

construction and information. Employment growth will be flat in upstream energy.¹

Greater Houston Partnership (forecast)

COMMERCIAL REAL ESTATE: A MIXED YEAR

Houston's office market finished '18 with 2.0 million square feet of negative absorption, according to CBRE. JLL places the figure slightly higher, at 2.7 million; NAI, slightly lower at 1.6 million. The Central Business District, Uptown/Galleria, Greenspoint, Energy Corridor and Southwest submarkets were the worst hit, accounting for the bulk of the space thrown back on the market, according to data reported by JLL. Fortunately, office construction remains subdued, with only 1.6 million to 2.2 million square feet under construction. Sublease leasing activity ticked up as well, notes JLL, helping reduce sublease inventory by 2.3 million square feet. Total available sublease space stood at 9.3 million square feet at the end of '17. Both CBRE and NAI reported positive absorption in Q4/17. Taken together, construction, Q4 absorption, and the drop in sublease space suggest the worst may be over for the office market. The effective vacancy rate is still between 20 and 25 percent, and given current leasing activity, the market will remain soft for some time.

The industrial market fared better, absorbing 7.0 million square feet of space, according to CBRE. JLL places absorption at 7.6 million square feet. The vacancy rate has inched up from 4.9 percent at year-end '15 and 5.1 percent at year-end '16 to 5.5 percent year-end '17. JLL estimates

¹ WTI traded between \$55 and \$58 in the weeks leading up to the forecast. Few analysts expected crude to breach \$60 per barrel. The forecast initially assumed WTI would hold above \$50 per barrel and was more concerned with the price dipping below \$50. The current \$60-plus price for WTI may prove transitory, but if the price holds for several quarters, the region may see growth in energy employment again.

that 4.6 million square feet of space was under construction in Q4/17. CBRE places the amount much higher, at 8.5 million. Given the current pace of leasing activity, JLL's construction data suggest a continuing tight market, while CBRE's suggest industrial vacancy rates may tick up this year.

The retail sector absorbed 2.0 million square feet of space in '17, well below the 4.0 million absorbed in '16 but above the 10-year average, reports CBRE. The overall occupancy rate of 94.1 percent slipped from 94.3 percent in '16. Average asking rates ticked up, from \$23.81 per square foot in '16 to \$25.30 in '17 on a triple-net basis.²

HOUSING MARKET HOLDS COURSE

John Burns Real Estate Consulting forecasts single-family home sales, new and existing, to tick up in '18 as the local economy moves closer to full recovery. Home values will continue to appreciate modestly, but housing affordability remains a concern as moderate appreciation continues to outpace recent wage growth in the region.

The market currently has a 3.9-month supply of resale homes, meaning the number of months it would take to deplete current active inventory for the single-family market based on the prior 12 months' sales activity. The typical home is on the market 55 days before closing, notes the firm. The 10-year average is 47 days. Currently, about 12 percent of all closings are above list price. The 10-year average is 15 percent.

METRO HOUSTON SINGLE-FAMILY HOUSING OUTLOOK (December to December)

	'17P	'18	'19
Existing Homes			
Appreciation	4.5%	4.7%	4.0%
Sales	84,600	83,200	81,900
New Homes			
Appreciation	0.6%	2.1%	2.4%
Sales	27,590	28,000	30,500
Affordability			
Housing Cost to Income Ratio	29.9%	31.7%	32.7%

ENERGY OUTLOOK IMPROVES

Prospects for the energy industry look better in '18 than it has in several years.

The global economy remains healthy. All 45 countries monitored by the OECD³ are growing, a phenomenon that has occurred only three times in the past 50 years. The OECD forecasts global GDP to grow 3.6 percent in '17, strengthening to almost 3.8 percent in '18.

Demand for crude continues to rise. The International Energy Agency estimates that oil demand rose by 1.5 million barrels a day in '17 and will increase another 1.3 million barrels in '18. The U.S. Energy Information Administration (EIA) expects demand to grow by more than 1.6 million barrels this year.

Crude inventories have begun to shrink, albeit slowly. Since reaching a record high of 3.09 billion barrels in July '16, total OECD liquid fuels inventories have fallen to 2.95 billion barrels in November '17. In the U.S., about 100 million barrels have been pulled from storage tanks since the end of Q1/17.

The November '17 agreement between OPEC, Russia and other non-OPEC producers to extend production cuts is holding. A December *Reuters* survey found that OPEC members have so far exceeded adherence to the curbs. Declines in Venezuelan output helped OPEC maintain its target, but additional cuts by Gulf exporters indicate a strong commitment to the deal.

Oil prices continue to trend upward. West Texas Intermediate, the U.S. benchmark for light, sweet crude, averaged \$55.26 per barrel in Q4/17, up 12.4 percent from \$49.14 in Q4/16.

Expectations are for crude prices to continue rising. Though unlikely to soar above \$100 per barrel, they're also unlikely to plunge below \$30. A *Wall Street Journal* survey of 15 investment banks suggests that Brent crude, the international oil-price gauge, will average \$58 a barrel in '18, up from an average of \$54 in '17. The banks expect WTI to average \$54 a barrel in '18, up from \$51 in '17.

² Tenant agrees to pay all real estate taxes, building insurance, and maintenance on the property in addition to normal fees expected under the agreement (rent, utilities, etc.).

³ The Organization for Economic Co-operation and Development is an intergovernmental economic organization with 35 member countries, founded in 1961 to stimulate economic progress and world trade. Its members include all the developed countries plus several of the larger emerging markets.

Judging by their capital spending plans, U.S. producers are now more optimistic. The Federal Reserve Bank of Dallas Q4/17 survey of U.S. energy firms found 51 percent of respondents expect their firm’s capital spending to slightly increase in ’18 compared with ’17, 19 percent expect significant increases, and 23 percent expect spending to be near ’17 levels for ’18. Only seven percent expect to decrease spending in 2018 compared with 2017.

U.S. producers are benefiting from both higher prices and higher production. The EIA forecasts domestic production to average 10.0 million b/d in ’18, up from 9.2 million in ’17. That level would surpass the previous record of 9.6 million b/d set in ’70.

And energy stocks, which had fallen out of favor with the investing community, have begun to recover. The S&P Energy Index, which includes shares of 35 energy companies, 32 with significant operations in Houston, has risen 42.7 percent since its January ’16 trough.

POST-HARVEY JOB GROWTH

Metro Houston created 15,700 jobs in November, according to the Texas Workforce Commission. That’s slightly above the 25-year average of 11,700 jobs for a November. When recession years are removed from the long-term average, November’s job growth is typical for the month. Over the 12 months ending November, the Houston region added 48,500 jobs, a 1.6 percent increase.

Retail trade recorded the strongest gains in November, adding 7,900 jobs. The increase is expected, given seasonal hiring for the holidays plus shopping related to the replacement of goods damaged in Hurricane Harvey.

Transportation, warehousing and utilities grew by 2,600 jobs, the largest November job gain for the sector since 1990, the earliest data are available. The rise of online retailers has increased demand for workers to package and deliver goods. Several distribution centers recently opened in Houston, including Amazon’s 855,000 square foot facility.

Professional and business services also experienced strong growth in November, adding 3,400 jobs. Architectural and engineering services accounted for 1,300 of that increase. An area of concern is in employment services, which lost 2,200 jobs. It is yet to be seen if that decline is due to contract workers being converted to full-time workers or contracts being terminated.

Health care posted a loss of 1,700 jobs, with ambulatory health care centers shedding 1,600 jobs. After an explosion of ambulatory care centers over the past few years, the sector is undergoing a period of contraction. Also, TWC estimated ambulatory care centers added 4,200 jobs in October, the strongest one-month gain on record, so November’s data may reflect an attempt to correct for an overestimation.

After the disruption from Hurricane Harvey, the region’s job market has rebounded. From September ’17 to November ’17, Houston gained 40,500 jobs, more than the 37,300 jobs added in the same period a year earlier. Some sectors still have not fully regained their footing. In particular, leisure and hospitality lost 11,400 jobs from September to November this year, when typically, the sector loses only 5,600 jobs during these months.

Houston’s unemployment rate was 4.3 percent in November, up from 4.1 percent in October but down from 5.2 percent in November ’16. Unemployed persons must be actively seeking work to be counted as unemployed. Houston’s unemployment rate fell from 4.8 percent in September to 4.1 percent in October, the region’s largest September to October drop on record. The sharp drop in the rate in October and the subsequent uptick in November most likely reflect people whose job searches were interrupted in the wake of Harvey but were resumed a month later.

Patrick Jankowski and Jenny Philip contributed to this issue of Houston: The Economy at a Glance.

SNAPSHOT — KEY ECONOMIC INDICATORS

Aviation — The Houston Airport System handled 49.2 million passengers through November of '17, down 1.2 percent from 49.9 million over the same period in '16. HAS handled 393,738 metric tons of air freight, up 3.9 percent from 379,054 metric tons handled over the same period in '16.

Building Permits — For the 12 months ending November '17, City of Houston building permits totaled \$6.0 billion, down 12.4 percent from \$6.8 billion in the 12 months ending November '16. Residential permits were up slightly by 0.8 percent to \$2.3 billion and commercial permits dropped 18.9 percent to \$3.7 billion.

Business-Cycle Index — The Houston Business-Cycle Index ticked up in November, employment totals surpassed pre-hurricane levels, and energy employment increased. Taken together, these data buttress a positive outlook for Houston.

Construction — Construction starts in the metro area totaled \$16.83 billion through November '17, up 10.1 percent from \$15.28 billion over the same period in '16, as reported by Dodge Data and Analytics. All the growth occurred in the nonresidential sector, which rose 25.9 percent.

Crude Oil — West Texas Intermediate, the U.S. benchmark for light, sweet crude, traded between \$55.79 and \$60.46 a barrel in December '17, versus \$49.85 to \$54.01 per barrel in December '16. The U.S. Energy Information Administration (EIA) forecasts WTI to average \$52.77 next year.

Home Sales — Houston-area home sales totaled 7,270 in November '17, up 4.9 percent from November '16, according to the Houston Association of Realtors®. For the 12 months ending November '17, total property sales rose to 94,301, up 3.4 percent from the same span last year.

Inflation — Consumer prices in the Houston-Galveston-Brazoria metro area (Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, and Waller Counties) grew 2.3 percent from October '16 to October '17. Core inflation rose 1.6 percent.

Natural Gas — The spot price for Henry Hub natural gas averaged \$2.81 per million BTUs in December, down 21.6 percent from the average of \$3.59 in December '16. EIA forecasts the Henry Hub spot price to average \$3.12 next year.

Purchasing Managers Index — The Houston Purchasing Managers Index, a short-term leading indicator for regional production, registered 52.8 in November, up from 49.3 in October. Readings above 50 signal economic expansion in Houston over the next three to four months. Readings below 50 signal contraction. The region's PMI finally pushed above 50 after three consecutive months pointing to contraction.

Rig Count — Baker Hughes reports 924 drilling rigs were working in the U.S. during the first week of January. That's up 259 rigs, or 38.9 percent, from the 665 in early January last year. The rig count peaked at 958 in late July, then briefly declined, but has trended upward since early November.

Sales Tax Collections — City of Houston sales tax allocations were \$56.2 million in December '17, up significantly from \$47.8 million in December '16. For the full year, the city collected \$638.7 million in sales and use taxes, up from \$630.2 million in '16.

Trade — Through October '17, \$157.3 billion in goods and commodities passed through the Houston/Galveston Customs District, up 18.6 percent from \$132.7 billion over the comparable period in '16. Exports totaled \$88.0 billion, up 17.3 percent. Imports totaled \$69.3 billion, up 20.2 percent.

Vehicle Sales — Local auto dealers sold 30,670 vehicles in November '17, a 35.3 percent jump from November '16, according to *TexAuto Facts*, published by InfoNation, Inc. of Sugar Land. Strong demand for replacement vehicles from Harvey continues to bolster sales, though 12-month totals still lag previous years. Dealers sold 293,614 vehicles for the 12 months ending November '17, down 3.1 percent from the same period last year.
