Effective July 1, 2002 (effective date of statute) - 100% of the actual purchase price from the first retail sale shall be used to established the taxable value for a newly purchased vehicles that are Class A or Class B greater than 16,000 lbs declared empty vehicle weight. If purchase price is not available for these vehicles use the above chart, to find the taxable value. Locate the taxable value by comparing the model year and the number of axles for the appropriate vehicle type. Use the taxable value indicated to complete the formula below to calculate the Ownership Tax due.

Example: 100% of the actual purchase price from the first retail sale is used.
 Vehicle's actual purchase price is \$65,000 x model year % (.90% if a 2010 vehicle) x CO mileage % (25%) = fees due

The taxable value shall not change for the life of the vehicle no matter how many owners the vehicle has had in its life time. However, the model year percentage does depreciate every year. This will lower the ownership tax.

If the purchase price is not available, for vehicles that are Class A or Class B, use above chart.

For vehicles that are Class A or Class B that are **less** than or equal to 16,000 lbs declared empty vehicle weight, use 75% of MSRP. Use above chart.

Example: 2008 Vehicle, 2 axle truck (\$16,898) x 75% x model year % (.45%) x CO mileage% (25%) - fees due

If purchase price is not available, for vehicles that are Class A or Class B **more** than or equal to 16,000 lbs declared empty vehicle weight, use 75% of MSRP. Use above chart.

Example: 2005 Vehicle, 3 axle tractor (\$89,995) x 75% x model year % (.45%) x CO mileage% (25%) - fees due
