

Mobile Data Collection, Visualization And Execution

Presenter(s):

Todd Steege, INS/GE

Abstract: Information visualization is core to process intelligence (P.I.) Process Intelligence is the means that data is both collected and communicated/visualized to the user. Results, alerts suggestions, or even more controlled guidance, all of these elements are passed through the data visualization function of a PI Platform. We will present and discuss three major trends of the last year that are reshaping the P.I. and analytic space: 1. Mobility and Remote Data Collection 2. Geolocation 3. Data Mashups
