

Quick Tour Of Arcgis Online And Practical Uses For Water / Wastewater

Presenter(s):

Paul Stephenson, Cloudpoint Geographics, Inc.

Jon Hodel, Cloudpoint Geographics, Inc.

Abstract: ArcGIS online is GIS in the cloud, a software as a service (SAAS). Organizations can develop or deploy their existing information (spatial data) over the web for ease of access, maintenance and sharing. Maps and applications can be created, shared and accessed over the web and mobile devices. For water and wastewater, AGOL can offer online and mobile solutions for referencing and updating a system's information, as well as completing and documenting location-based tasks.
