

# *Curriculum*

At Kappa Kamp, our curriculum is about making learning fun and engaging. In this environment, students in our programs gain the skills necessary to be great decision makers. Unlike other summer camps that focus on one discipline, such as writing or math, Kappa Kamp will place emphasis on college readiness and career readiness while introducing the importance of servant leadership and entrepreneurship along the way. Exposure to the broad range industry leaders will spark interest in the unique skills and provide a practical but valuable experience.

The critical element we will seek to accomplish is teaching students to think. Students will work in small groups and given the task of creating a concept that must show a need in society and the ability to turn a profit by the end of the camp. We will also expose them to community and social programs that will expand their awareness of critical resources.

Understanding how the mind approaches learning can have a significant effect on a student's performance in school. Students who attend one of our educational summer camps will be able to learn, comprehend, and recall information more easily, which can lead to better grades, and ultimately to a higher GPA. Similarly, studying becomes a much easier task once a student knows how to utilize the customized style-specific techniques they learn.

In addition, the following topics that empower students to be successful in their academic and personal lives are covered indepth:

- Study Strategies
- Reading
- Writing
- Note-Taking/Mind Mapping
- Memory
- Math
- SAT/ACT
- College-Prep
- 8 Keys of Excellence Character Program
- 21st Century Skills
- Communication and Relationships
- Leadership
- Breaking Through Personal Barriers
- Motivation and Goal Setting

As a component of the nationally mandated Guide Right Program of Kappa Alpha Psi Fraternity, Inc., local alumni chapters, comprised of college-educated leaders in their respective communities, work with Kappa Kamp graduates to build on the skill sets derived from the summer enrichment program by collaborating on goal-setting and envisioning programs that are capable of being completed so that participants' confidence is strengthened during the leadership development process.

Measureable academic data derived from Kappa Kamp will be submitted to the Kappa Alpha Psi Foundation to complete the Foundation's reporting requirement with respect to the grant and allow statistical analysis to be developed in future years of the Kappa Kamp program.
