Learning Objectives:
1. Evaluate the most common gynecologic emergencies in the pediatric/adolescent population
2. Formulate management plan for pediatric/adolescent patients presenting with vaginal bleeding, genital trauma and pelvic pain in the acute setting
3. Determine appropriate follow up for the most common gynecologic emergencies in the pediatric/adolescent population

I. Overview of most common gynecologic emergencies in the pediatric and adolescent population

II. Vaginal bleeding: Evaluation and management
   A. Prepubertal vaginal bleeding
      i. Vulvovaginitis
      ii. Foreign body
      iii. Urethral prolapse
      iv. Precocious puberty
   B. Postpubertal vaginal bleeding
      i. Abnormal uterine bleeding

III. Genital trauma: Evaluation and management
   A. Straddle injury
   B. Vulvar hematoma

IV. Pelvic pain: Evaluation and management
   A. Adnexal cysts: ovarian, paratubal cysts
      i. Adnexal torsion
   B. Pelvic inflammatory disease
      i. Tubo-ovarian abscess
   C. Obstructive genital lesions
      i. Imperforate hymen
      ii. Lower vaginal atresia
      iii. Vaginal septum

V. Other gynecologic emergencies
