

January 9, 2017—CMAST 1.2.17

Improvements and fixes

This update includes these improvements and fixes. Key changes include:

- *Moved the ability to generate a bid report from the CMAST Application to the CMAST web.*
- *Requiring minimum project information entered in CMAST application before a bid report can be generated.*
- *The CMAST application allows a one touch reconnect when exiting Smart Sync.*
- *Added the ability to search by project to the CMAST web.*
- *Modified content appearing on the bid report (i.e. actual vs. specified size; detailed project information and contact information).*

Known issues in this update

This update does not correct the issue when products drop their calculation when uploaded/downloaded with a project. To correct this issue simply open the Project screen, select the detailed product information and calculate.

How to get this update

This update will be available on January 9, 2017. The user will download and install the new release before working in CMAST on this date. All other versions of this software will no longer be able to connect to the CMAST server. Please make sure all of your work is uploaded to the server via Smart Sync or manually save the CMDOP file to a new location.

- **Prerequisites**
To use this release, you must have [Window 6.3.74](#) & [Therm 6.3.46](#) installed.
- **Update replacement information**
This version replaces CMAST 1.2.16.
- **File information**
All previous CMDOP files from 1.2.16 will work with the new release of 1.2.17. Please make sure that all CMDOP files are saved to a different location than C://ProgramData/CMAST. This CMAST file will reset during uninstall/reinstall and all information will be lost. Please follow this [link](#) for instructions on how to reset or save the CMDOP.CDF file.
