Dear Colleagues,

On behalf of the SRNT Program Committee, we welcome you to the 23rd Annual Meeting of the Society for Research on Nicotine and Tobacco (SRNT), in the wonderful city of Florence!

As always the meeting offers you a transdisciplinary collection of cutting-edge science across the full spectrum of basic and applied research on nicotine and tobacco. This year there will be presentations on a number of pivotal clinical trials, plus hot topics in the field of tobacco use epidemiology, genomics, biomarkers, cue reactivity, e-cigarettes, cigar use, waterpipes, smokeless tobacco, secondhand exposure, and tobacco product regulation. However, you will notice this year that there is a strong focus on concurrent use of tobacco with other psychoactive substances and drugs. We will discuss findings from basic science, pre-clinical and clinical studies to understand complex interactions between nicotine and other substances. Whilst the overall prevalence of smoking is decreasing in many countries, a significant proportion of tobacco smokers also use various psychoactive substances. Also, smoking rates are high among those who are addicted to various legal and illegal drugs, including marijuana, alcohol, and opioids. These populations need to be a focus of tobacco control policies and interventions moving forward, so that “no man is left behind” in our efforts to reduce smoking prevalence. In this manner equity is the focus, not just equality.

Several key highlights for the meeting are:

**Wednesday, March 8, 2017**

We have created an opportunity for all participants to join editors of the leading tobacco and nicotine journals for conversation. Meet-the-Editor is a chance to put members of the editorial boards in the hotseat. Editor of each journal will host a face-to-face session with the participants of the meeting. The editor will be available to answer questions, hear ideas, and discuss any comments about the journals. All are welcome but graduate students and postdocs are particularly invited.

For meeting attendees arriving early, there are 10 pre-conference workshops that will be held on Wednesday, March 8 (available at an additional fee). These include:

- SRNT-E Satellite Symposium: Comparing Regulations on Tobacco and Nicotine Products
- Novel Approaches to Implementing Tobacco Treatment Within Health Systems
- Is Nicotine Reduction Really a Viable Policy Option for Tobacco Control?
- Developing Evidence-Based Control Policies Targeting Waterpipe Tobacco Smoking: Time for Action

Tobacco and Marijuana Co-Use in Adolescents and Young Adults

What Does Our Tobacco Work Mean to Us? Translating Knowledge Through Art in Florence

To follow, and as part of the general registration, please join us for the highly interactive Transdisciplinary Topical Discussions on Wednesday afternoon from 3:30 p.m.-4:45 p.m.:

E-Health Smoking Cessation Interventions: Do They Really Work?

NRT Bought Over the Counter: Are Gums and Patches Possibly Not Effective in the Real World?

Polysubstance Abuse: How to Treat Tobacco Alongside Other Addictions?

Financial Incentives for Quitting Tobacco: An Effective and Ethical Approach?

Making the Delivery of Tobacco Cessation Treatment Routine in Health Care Systems: What Are the Challenges?

Vape Shops: Just Another Tobacco Product Retailer or a Smoking Cessation Service?

How Do We Reduce Children’s Exposure to Second-Hand Tobacco Smoke Globally?

For the first time in SRNT history, we have received over one thousand (!!!) abstracts submissions. Over the past six months, we have worked thoughtfully to create a timely and high-quality scientific program spanning the full breath of the nicotine and tobacco research field. Our early registration numbers indicate attendance may break another record, being even higher than last years’ meeting in Chicago. Back by popular demand, we are utilizing nine consecutive rooms during podium presentations, so yes, we anticipate hearing it is hard to choose!

We encourage you to attend sessions that stretch and expand your expertise, that you engage the company of your colleagues and seek out new connections, and importantly, that you enjoy the meeting and the true spirit of Italy!

Kind Regards,

Complimentary Internet access will be available in the Congress Center meeting space available to all SRNT attendees. We kindly request ONE device per person. Instructions will be given on site.

EDUCATIONAL OBJECTIVES

- Address nicotine and tobacco’s role in the changing health care environment
- Describe new research and clinical data on the effects of nicotine and tobacco
- Discuss recent advances in nicotine and tobacco research
- Highlight international research on tobacco control
- Through scientific exchange, integrate current research with implications for clinical practice
- Address clinical and public health implications of concurrent use of tobacco with other psychoactive substances and drugs.

TARGET AUDIENCE

The 23rd Annual Meeting of SRNT is geared toward individuals involved in the research of nicotine and tobacco. This includes basic, clinical, policy, and public health scientists from academia, government, and industry.

Please note: Symposia that take place in advance of the meeting, after the meeting’s conclusion, or during evening hours are not...
part of the SRNT Official Program unless specifically noted. The Program Committee has not reviewed the scientific content of Satellite Symposia. Satellite Symposia presenters are responsible for providing disclosures during their session.

CONTINUING EDUCATION CREDIT FOR PSYCHOLOGISTS

Continuing education credits have been approved for licensed psychologists. Postgraduate Institute for Medicine (PIM) is approved by the American Psychological Association to sponsor continuing education for psychologists. PIM maintains responsibility for this program and its content. Full attendance at the sessions and evaluation of each individual session attended is required to receive CE credit for psychologists. Partial credit will not be awarded. Late arrivals or early departures will preclude awarding of CE credits.

CONTINUING EDUCATION CREDIT FOR PHYSICIANS

This activity has been planned and implemented in accordance with the accreditation requirements and policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint providership of Penn State College of Medicine and the Society for Research on Nicotine and Tobacco. Penn State College of Medicine is accredited by the ACCME to provide continuing medical education for physicians.

Physicians who have completed an MD, DO, or equivalent medical degree from another country, or who have obtained a Fifth Pathway certificate, are eligible to receive AMA PRA Category 1 Credit(s)™.

REQUIREMENTS TO RECEIVE CREDIT (AMA OR APA)

Evaluation of the sessions is integral to the education process. To receive AMA PRA Category 1 credit(s)™ credit, participants are required to:

A. Complete the attendance form, indicating only those sessions attended in their entirety;

B. Complete the overall evaluation form and corresponding individual evaluation pages; and

C. Return the forms to the CME registration table to receive CME Certificate.

SRNT is proud to announce Meet-the-Editor sessions. During the 2017 SRNT meeting we have created an opportunity for all participants to join editors of the leading tobacco and nicotine journals for conversation. Meet-the-Editor is a chance to put members of the editorial boards in the “hot seat.” Editor of each journal will host a face-to-face session with the participants of the meeting. After a presentation by the editor, the session opens up to questions from the floor, giving you the opportunity to get an insight into the review process and clear up any submissions queries you may have. The editor will be available to answer questions, hear ideas, and discuss any comments about the journals. All are welcome but graduate students and postdocs are particularly invited.

REMEMBRANCES OF PIONEERS FOR WHOM SRNT’S 2017 AWARDS ARE NAMED

SRNT’s annual awards presentation will be Thursday, March 9, at 9:00 a.m. in the building Palazzo dei Congressi (PDC), meeting room: Auditorium. Our awards are named after pioneers in the field of nicotine and tobacco research, and we are pleased to remember those pioneers.

THE JOHN SLADE AWARD

The John Slade Award honors individuals who have made outstanding contributions to public health and tobacco control through science-based public policy and public advocacy.

2017 Award Recipient:

Martin Raw, PhD
Director, International Centre for Tobacco Cessation
Visiting Scholar, New York University School of Medicine, USA
Honorary Associate Professor, UK Centre for Tobacco and Alcohol Studies, School of Medicine, University of Nottingham, UK

JOHN SLADE

Dr. John Slade was an expert on the treatment of alcohol, tobacco, and drug addiction, and one of America’s pioneer advocates for tobacco control.

He was a member of the team that conducted the first scholarly analysis of previously secret documents from the Brown and Williamson Tobacco Company, which formed the basis for the film “The Insider.” John’s analysis led to a landmark series of articles in the Journal of the American Medical Association in 1995, as well as a book, “The Cigarette Papers.” His groundbreaking
research to prove that cigarettes are nicotine delivery devices helped make it possible for the Food and Drug Administration to claim regulatory authority over tobacco products under then-FDA Commissioner Dr. David Kessler.

John was appointed Professor of Medicine, Robert Wood Johnson Medical School of the UMDNJ, in 1998. He emerged as a leader in substance abuse prevention and tobacco control for the state of New Jersey through his teaching and clinical work as well as through his active involvement with the Medical Society of New Jersey and the New Jersey Public Health Association. John played a major role in helping New Jersey develop its tobacco prevention and treatment program, funded as part of the 1998 $206 billion settlement with tobacco companies.

He co-edited the first major clinical textbook on nicotine addiction and founded the Committee on Nicotine Dependence of the American Society of Addiction Medicine (ASAM).

THE JARVIK-RUSSELL NEW INVESTIGATOR AWARD

The Jarvik-Russell Young Investigator Award, named after Murray Jarvik and Michael Russell, recognizes scientists early in their careers who have made extraordinary contributions to the field of nicotine and tobacco research.

2017 Award Recipient:

Thomas R. Kirchner, PhD
Clinical Associate Professor of Public Health, Medicine, and Urban Science
NYU College of Global Public Health
New York, USA

MURRAY E. JARVIK

Dr. Murray Jarvik was born in New York City in 1923. Following medical school, Murray worked at the Yerkes Laboratory in Florida. It was here that he serendipitously witnessed a monkey that would smoke cigarettes. A Fellowship at Mount Sinai Hospital in New York followed, where Murray became one of the pre-eminent researchers studying a newly discovered substance: LSD.

LSD research pivoted Murray into the emerging field of psychopharmacology in the mid-1950’s and to a professorial position at the newly created Albert Einstein School of Medicine. It was here that Murray established himself as a premier researcher on effects of drugs on learning and behavior.

Murray’s interests in the mid-1960s turned toward tobacco smoking. Although Murray continued, initially, to study the effects of other drugs and memory, he eventually shifted his focus to smoking and nicotine addiction almost entirely.

One of the first projects he attempted, spurred by the very memorable observation at Yerkes, was to attempt to get monkeys to smoke. This was partially successful and led to experiments with humans and rats so that by 1970 Murray had collected sufficient data to suggest that nicotine was key in the reinforcement of smoking. His work was included in subsequent Surgeon General Reports on smoking and nicotine addiction.

Perhaps Murray Jarvik’s most notable achievement was work done with Jed Rose in the 1980’s investigating the possibility of delivering nicotine through the skin in sufficient quantities to
affect smoking behavior. At first, their approach was quite simple, a basic poultice of nicotine. After much development, they were able to patent the concept of a nicotine transdermal patch, which they turned over to UCLA. It soon made it into production as the second FDA-approved pharmacologic treatment for smoking cessation after nicotine gum. With both established efficacy and ease of use, it was highly successful, for several years among the top three most profitable patents for the University of California.

MICHAEL RUSSELL

By the 1960s, the emerging evidence of the danger of cigarette smoking was clear, but there was very little understanding of why people smoked. Cigarette smoking was generally thought of as a habit, with pharmacological factors receiving little or no attention.

Michael Russell was the man who did most to revolutionize our understanding. His research led to the 1988 report of the US Surgeon General, Nicotine Addiction, which finally brought recognition that cigarette smoking is a classic drug dependence. Russell was a psychiatrist in training at the Maudsley hospital, in south London, when he chose the topic of cigarette smoking for his research thesis in 1967. Based on his review of what was then fragmentary research literature, he concluded in a 1971 paper that the drug nicotine was the motivating force underlying smoking behavior. He made the study of the interacting pharmacological and psychological determinants of tobacco dependence his life’s work.

Mike is regarded by many as the father of effective treatment to help smokers quit. But he is probably best known in the cessation field for a non-pharmacological intervention. In 1979 he published a trial examining the effectiveness of brief advice to quit smoking given by GPs in the course of routine consultations. The one-year success rate was 5%, compared with less than 1% in controls. A successful trial of nicotine chewing gum combined with brief advice in primary care followed. Mike Russell moved toward the concept of an integrated district smoking cessation service, in which routine delivery of advice and pharmacological therapy in primary care was combined with intensive clinic support. That vision has now been realized in Great Britain’s National Health Service.

THE DOLL-WYNDER AWARD

The Doll-Wynder Award honors scientists who have made groundbreaking advances in public health, public policy or epidemiological research.

2017 Award Recipient:
Kenneth E. Warner
Avedis Donabedian Distinguished University Professor of Public Health at the University of Michigan, USA.

RICHARD DOLL

Sir William Richard Shaboe Doll was a British physiologist who became the foremost epidemiologist of the 20th century, turning the subject into a rigorous science. He was a pioneer in research linking smoking to health problems. With Ernst Wynder, Bradford Hill and Evarts Graham, he was credited with being the first to prove that smoking caused lung cancer and increased the risk of heart disease.

In 1948 he joined a research team under Dr. Francis Avery-Jones at the Central Middlesex Hospital, run under the auspices of the
statistical research unit of the Medical Research Council. Over a 21-year career in the unit, Doll rose to become its director. In 1950, he undertook with Austin Bradford Hill a study of lung cancer patients in 20 London hospitals, at first under the belief that it was due to the new material tarmac, or motor car fumes, but rapidly discovering that tobacco smoking was the only factor they had in common. Doll himself stopped smoking as a result of his findings, published in the *British Medical Journal* in 1950, which concluded: “The risk of developing the disease increases in proportion to the amount smoked. It may be 50 times as great among those who smoke 25 or more cigarettes a day as among non-smokers.”

Four years later, in 1954 the British doctors study, a study of some 40,000 doctors over 20 years, confirmed the suggestion, based on which the government issued advice that smoking and lung cancer rates were related.

In 1966 Doll was elected to the Royal Society. The citation stated: Doll is distinguished for his researches in epidemiology, and particularly the epidemiology of cancer where in the last 10 years he has played a prominent part in (a) elucidating the causes of lung cancer in industry (asbestos, nickel & coal tar workers) and more generally, in relation to cigarette smoking, and (b) in the investigation of leukaemia particularly in relation to radiation, where using the mortality of patients treated with radiotherapy he has reached a quantitative estimate of the leukaemogenic effects of such radiation. In clinical medicine he has made carefully controlled trials of treatments for gastric ulcer. He has been awarded the United Nations prize for outstanding research into the causes and control of cancer and the Bisset Hawkins medal of the Royal College of Physicians for his contributions to preventative medicine.

Doll was made a Fellow of the Royal Society in 1966, Knighted in 1971, and awarded the Edward Jenner Medal of the Royal Society of Medicine in 1981. In 1996 he was made a Companion of Honour for “services of national importance”. International honours included the Presidential Award of the New York Academy of Sciences as well as a UN Award for his research into cancer. In April 2005, he was awarded the Saudi Arabian King Faisal International Prize for medicine jointly with Richard Peto for their work on diseases related to smoking. In 2004, he was awarded the inaugural Shaw Prize for Life Sciences and Medicine for his contribution to modern cancer epidemiology. He was also awarded honorary degrees by thirteen different universities.

ERNST WYNDER

Ernst Ludwig Wynder was an American epidemiology and public health researcher who studied the risk factors of smoking tobacco. His 1950 coauthored publication of “Tobacco Smoking as a Possible Etiologic Factor in Bronchiogenic Carcinoma: A Study of 684 Proved Cases” appeared in the *Journal of the American Medical Association*. It was one of the first major scientific publications identifying smoking as a contributory cause of lung cancer.

Wynder began collaborating with his coauthor on the article, Evarts Ambrose Graham, as a medical student at Washington University in St. Louis in 1947. The previous summer he had conducted epidemiological studies of smoking behavior among 146 lung cancer patients in New York City. The project was funded by the American Cancer Society. Now, with Graham, Wynder collected extensive data on 604 patients with lung cancer at hospitals across the United States. Departing from a tradition of using anecdotal evidence (e.g., clinical interviews) to develop explanations
of disease causation, Wynder and Graham applied rudimentary statistical methods to their study. They divided patients into crude categories of “moderate” or “heavy” smokers, based on retrospective interviews of each patient’s smoking behavior over a twenty-year period. They also measured and controlled for important confounding factors (e.g., age, types of tobacco use, inhalation level). Most importantly, with regard to an ability to demonstrate causation, Wynder and Graham also studied a control group of cancer-free individuals in hospitals. They used this control group to systematically compare their lung cancer patients.

On May 27, 1950 the *Journal of the American Medical Association* published the resulting scientific report. Wynder and Graham found that lung cancer could develop among nonsmokers, such that smoking is not the single factor in the induction of disease. But they identified smoking’s role as a significant risk factor for lung cancer, providing four reasons to support this argument: 1) lung cancer prevalence was found to be rare in nonsmokers; 2) among patients with lung cancer, cigarette use tended to be high; 3) lung cancer prevalence among men and women matched patterns of smoking behavior in men and women; and, lastly, 4) “the enormous increase in the sale of cigarettes in this country approximately parallels the increase in [lung cancer].” As further scientific evidence of smoking’s role in causing lung cancer began to mount in the United States and Great Britain, Wynder and Graham investigated the biological plausibility of the association between smoking and lung disease. In 1950, they initiated a study of the impact of tars from tobacco smoke on mice. After a year of exposure to tar, 44 percent of the mice developed cancers. Wynder also discovered specific carcinogens in tar (e.g., benzo-pyrenes, arsenic), but was unable to identify the contributions of these chemicals to cancer.

Transdisciplinary Topical Discussions

#1-#7 are held concurrently

These roundtable sessions have been selected to address a diverse array of pressing questions in our field. They will be moderated by world leading experts who will stimulate and encourage group discussion. These sessions are designed to be transdisciplinary—covering preclinical and clinical research and diverse methodologies. You do not need to be an expert in the subject area to attend a session. In fact, we encourage that you cross boundaries and take the opportunity to participate in new topical discussions that will develop novel ideas and viewpoints.

E-Health Smoking Cessation Interventions: Do They Really Work?

Electronic health (e-health) interventions for smoking cessation have become increasingly popular during recent
years due to technological advances and facilitation by the Internet. Such interventions can potentially reach large numbers of smokers at low cost, and their flexibility enables personalised tailored support. On the other hand, many e-health interventions are anonymous by nature and less obliging than face-to-face behavioural support, leading to lower adherence. As they can be developed and maintained at relatively low cost, there is an excess supply of interventions available, in particular regarding smartphone apps. Moreover, evidence of their effectiveness is often lacking and also difficult to obtain due to methodological challenges. **Moderator(s):** Saul Shiffman, PhD, University of Pittsburgh, USA

**NRT Bought Over the Counter: Are Gums and Patches Possibly Not Effective in the Real World?**
Evidence from over 150 randomised controlled trials clearly demonstrates the efficacy of nicotine replacement therapy (NRT) for smoking cessation. NRT in its various forms of delivery (gum, patch etc.) are the most frequently used pharmacotherapy for smoking cessation. In many countries, NRT is also available over the counter (i.e., without prescription and behavioural support from a health professional). Due to the efficacy of NRT, proven by clinical trials, and its popularity as and aid to cessation, NRT bought over the counter seems to be a powerful method to improve the population’s health. However, recent studies have raised concerns about the effectiveness of NRT bought over the counter in the real world, outside of clinical trials. **Moderator(s):** Ann McNeill, PhD, King’s College, London, United Kingdom

**Polysubstance Abuse: How to Treat Tobacco Alongside Other Addictions**
Tobacco addiction is strongly associated with other addictions, in particular alcohol use disorders. The health risks of single addictions are many and may be amplified by polysubstance abuse, highlighting the need for effective cessation treatments. Currently each addiction is usually treated independently, but it may be advantageous to treat multiple co-occurring addictions simultaneously. However, there are challenges to this approach, which include insufficient knowledge on how to develop new, effective, multi-target treatments with interacting treatment components and how to implement these in patient care. **Moderator(s):** Carla Berg, PhD, Emory University Woodruff Health Sciences Center, Atlanta, USA

**Financial Incentives for Quitting Tobacco: An Effective and Ethical Approach?**
Quitting tobacco is vital to reduce health risks, but also very difficult due to the addictive nature of nicotine. There are evidence-based behavioural and pharmacological treatments for smoking cessation, but their success rates are limited. Recent studies have investigated whether providing financial incentives might increase smoking cessation rates, particularly in specific subgroups of the smoking population such as pregnant smokers and smokers with low socioeconomic status. There are concerns, however, about the long-term
effectiveness beyond the period of reward and the ethics of paying people to change their behaviour, as well as who should defray associated costs.

**Making the Delivery of Tobacco Cessation Treatment Routine in Health Care Systems: What Are the Challenges?**  
Tobacco use remains a leading preventable cause of morbidity and mortality. During the past decades, various effective and cost-effective behavioural and pharmacological smoking cessation treatments have been developed and tested. Clinical guidelines recommend clinicians to offer evidence-based treatment to every smoking patient. Yet, far too few smoking patients receive competent smoking cessation advice and the offer of evidence-based treatment when consulting their health care provider. It seems that, despite the necessity to routinely deliver evidence-based treatment, implementation in our health care systems remains challenging.

**Vape Shops: Just Another Tobacco Product Retailer or a Smoking Cessation Service?**  
Stores that sell electronic nicotine delivery systems (ENDS) as their primary product are an emerging phenomenon. Such "vape shops" provide consumers a place to purchase and discuss e-cigarettes and offer an environment that serves as a place of recreation with customers lounging once inside. Their growing presence and marketing raise important questions about how these shops might potentially affect the public's health. They may attract novice ENDS users and non-smokers alike, and may influence social norms around ENDS use, particularly around acceptability for use indoors. On the other hand, vape shop owners are in a unique position to serve as frontline consumer educators regarding the benefits and risks of ENDS. This unique context highlights the importance of understanding the interactions between vape shop owners, workers and customers.

**How Do We Reduce Children’s Exposure to Second-Hand Tobacco Smoke Globally?**  
Exposure to secondhand tobacco smoke (SHS) has been causally linked with mortality and morbidity in non-smokers and disproportionately affects the health of children. Globally, hundreds of millions of children are regularly exposed to SHS, especially in their home. New evidence is emerging on how to reduce children’s exposure to SHS, but there are still significant gaps in the knowledge and there is discussion about future directions in research and policy.  

**Moderator(s):** Megan Passey, PhD, University of Sydney, Australia
Whilst the overall prevalence of smoking is decreasing in many countries, a significant proportion of tobacco smokers also use various psychoactive substances. Smoking rates are high among those who are addicted to various legal and illegal drugs, including marijuana, alcohol, and opioids. These populations need to be a focus of tobacco control policies and interventions moving forward, so that ‘no man is left behind’ in our efforts to reduce smoking prevalence. During this symposium, we will address the added complexities of nicotine and other addictive behaviors across the translational continuum. First, Dr. Cohen will present the scope of use of other drugs by tobacco users, and use of tobacco by users of other drugs. Dr. Benowitz will review pharmacokinetic and pharmacodynamics interactions between nicotine and alcohol, cannabis, opiates and stimulants. Dr. West will show how a general model of behavior can provide a framework for understanding patterns of association with addictive disorders and how this can be used to guide interventions to combat cigarette addiction in people who also suffer from other addictions. The public health challenge is to develop a framework that leads to the least harmful use of the least harmful products or mix of products. Dr. Borland will discuss how tobacco smoking and nicotine fit into that agenda. Dr. Prochaska will present new data and review the literature on treating tobacco addiction in smokers with co-occurring alcohol and other drug use disorders.
