

Canadian Alliance Newsletter- June, 2017

The **Canadian Integrated Health Alliance** (www.cihalliance.org) connects national and international stakeholders in government, medicine and industry for more productive partnerships through collaboration. The resulting network of “ecosystems” are a powerful and proven force for change, as our combined knowledge and skills are expanding resources, reducing costs and solving complex healthcare problems faster than any one group alone.

The Canadian Alliance is currently supporting several important e-Health collaborations, including:

- **REMOTE PATIENT MONITORING:** The CIHAlliance is facilitating a multi-stakeholder research and industry consortium that will drive an intelligent geographical safety net to track the location and monitor the wellbeing of Alzheimer’s and Dementia patients in a domicile homecare environment.
- **INTERNATIONAL MARKET ACCESS PROGRAMS (i-MAP):** Ted Scott, Chief Innovation Officer, Hamilton Health Sciences (HHS) joined our ecosystem in January and recently spoke at the international health innovators network and brainstorm conference for Oulu Health, Finland. Representing the Hamilton’s Synapse Consortium, Ted shared his insights on healthcare development in Canada while seeking reciprocal commercial opportunities with e Health stakeholders in Finland.

CIHAlliance is exploring similar i-Map opportunities with HHS and Synapse.

- **e-LEARNING APP FOR HOMECARE.** The Canadian Alliance is currently rallying the Ontario Ecosystem to support the development of a smartphone App that will provide skills development and management tools for personal support workers in domicile homecare.

For more information about these programs and related e Health initiatives for “Active and Healthy Ageing” in Canada, please contact Alex Szucs, President of the Canadian Integrated Health Alliance at aszucs@bell.net.
