### **National Plasterers Council Releases New Technical Bulletin: *The Most Common Reasons for Loss of Color***

*May 1, 2018; Wauconda, Illinois* -- The National Plasterers Council (NPC) is pleased to announce the release of its most recent Technical Bulletin. As the leading authority on cementitious interior finishes for swimming pools and spas, the NPC has released Technical Bulletin #4 "The Most Common Reasons for Loss of Color" dealing with color loss issues that can occur in pool finishes.

Jonathan Dongell, Chair of NPC's Technical Advisory Committee stated, "The Committee painstakingly reviewed the various types of color loss and evaluated the laboratory tests and techniques commonly used to determine the mechanism(s) that cause or contribute to such issues. I am pleased with TAC committees' work, and for the dedication of all NPC committee members, for their continued effort to promote consumer confidence through knowledge and education."

NPC's Chairman of the Board of Directors, Lee Valenzuela added: "The NPC has made a commitment to its members, the industry, pool owners, and the public, to provide them with the most accurate and timely information relating to the Swimming Pool Plastering Trade. I am very proud of the Technical Advisory Committee for their continued hard work, and the release of another very important NPC Technical Bulletin."

The new NPC [Technical Bulletin #4](#) can be found at [npconline.org](http://npconline.org) in the [technical library](#). Please be sure to visit the site for all the latest NPC technical and educational offerings.

###

The National Plasterers Council is an international trade association that is the utmost authority in the preparation, application, materials, start-ups and preservation of cementitious pool interior finishes. The NPC provides promotional, educational, and technical assistance based on industry research for the pool industry.
