

## *The Average Zero of a Polynomial's Various Derivatives*

**Michael W. Ecker**

Pennsylvania State University – Wilkes-Barre Campus

### ***Abstract***

Calculus is filled with applications, including graphing techniques, in which various polynomials and their derivatives are set equal to zero, as in looking for  $x$ -intercepts (aka roots or zeros), critical points, and possible inflection points. The author takes a look at sums and averages of zeros for general polynomials.

**Michael W. Ecker** (DrMWEcker@aol.com or MWE1@psu.edu) is associate professor of mathematics at Pennsylvania State University's Wilkes-Barre campus. He received his PhD in mathematics from the City University of New York in 1978 under Harry Rauch. He has published regularly as a traditional mathematician, recreational mathematician, problem solver, and computer journalist in numerous publications. He founded The AMATYC Review problem section in 1981, which he edited until 1997. For 21 years, he wrote, edited, and published his own newsletter, *Recreational & Educational Computing*, featuring the interplay of mathematics, computers, and recreations. He is the author of 500 newsletters, columns, reviews, articles, and books.
