ABOUT ASDIN...
Founded in 2000, ASDIN’s mission is to promote the appropriate application of new and existing procedures in order to improve the care of patients with kidney disease. These procedures include, but are not limited to, insertions of tunneled hemodialysis and peritoneal dialysis catheters, endovascular procedures, and diagnostic sonography. The Society works closely with other societies and with nephrology training programs to achieve its goals. All physicians (nephrologists and others), administrators, technologists, and nurses involved with the care of nephrology patients are invited to join and become active in the Society.

Activities of the Society include:
• Establishment of practice standards
• Certification of physicians in specific procedures
• Accreditation of training programs in specific procedures
• Development of training tools and techniques
• Sponsoring symposia and training courses
• Dissemination of information through periodic meetings and through print and other media
