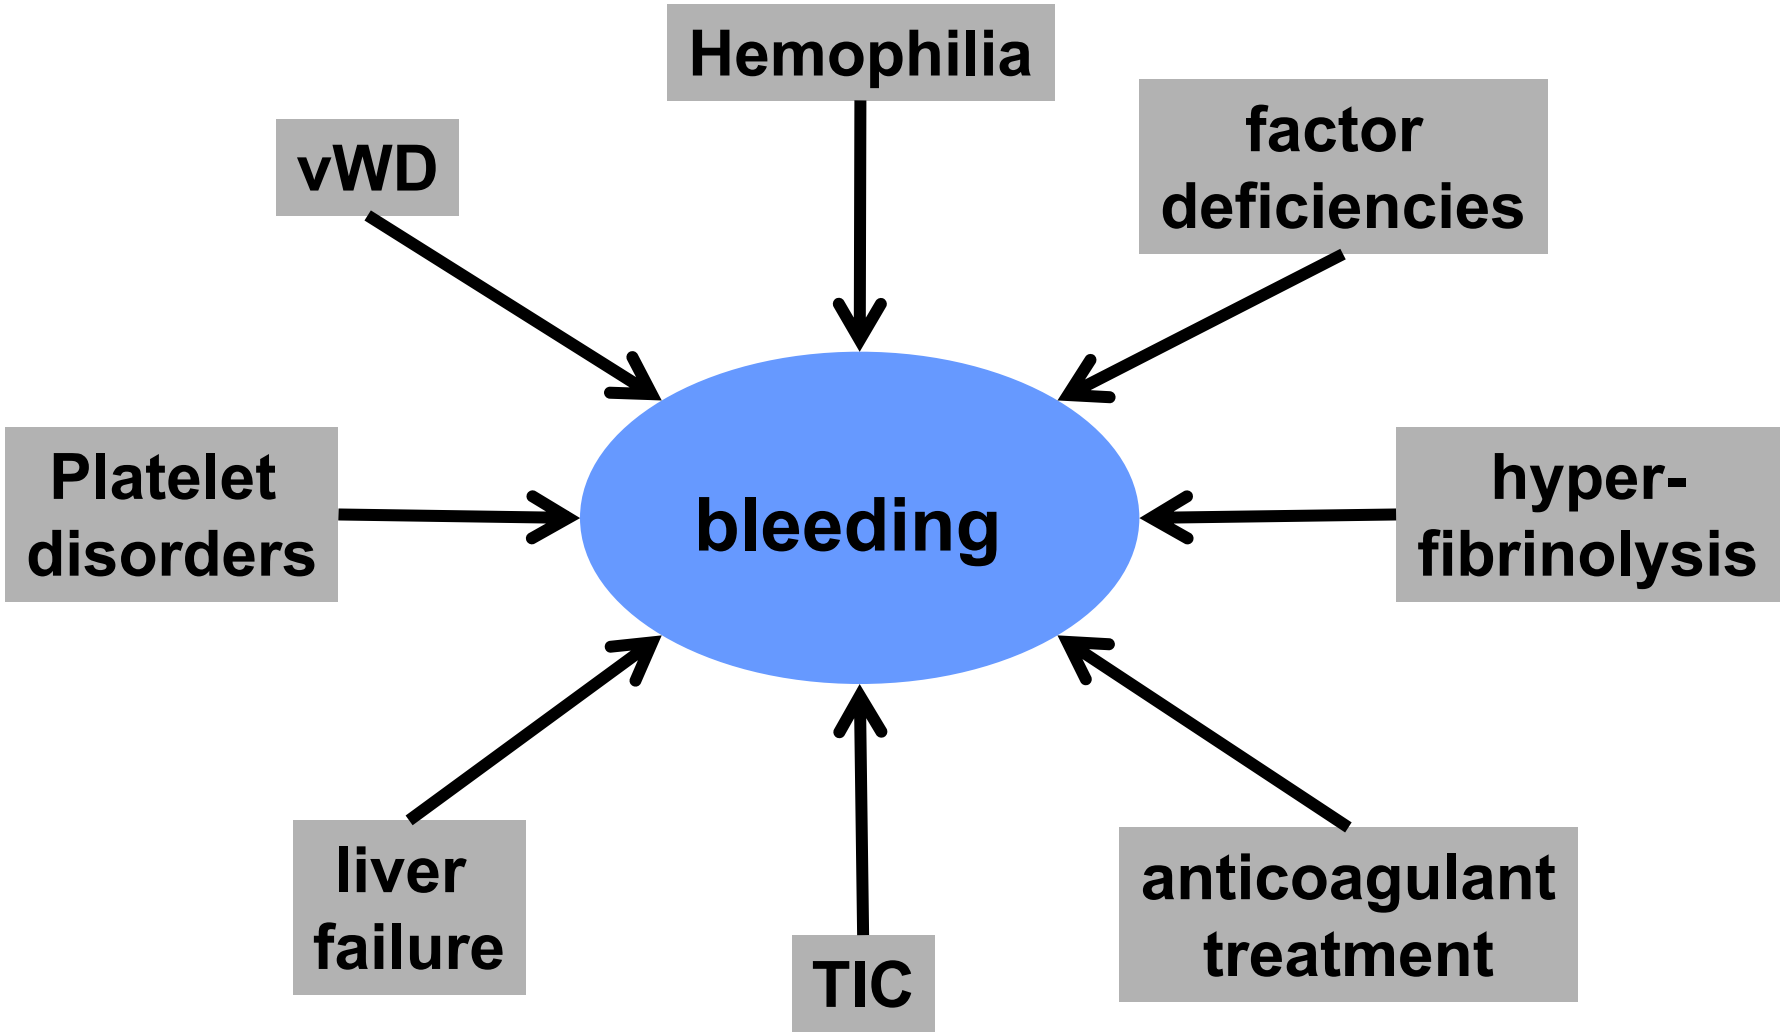
universitäts klinikumbonn

How to approach a patient with bleeding?

ISTH Advanced training course, Portugal March 2014

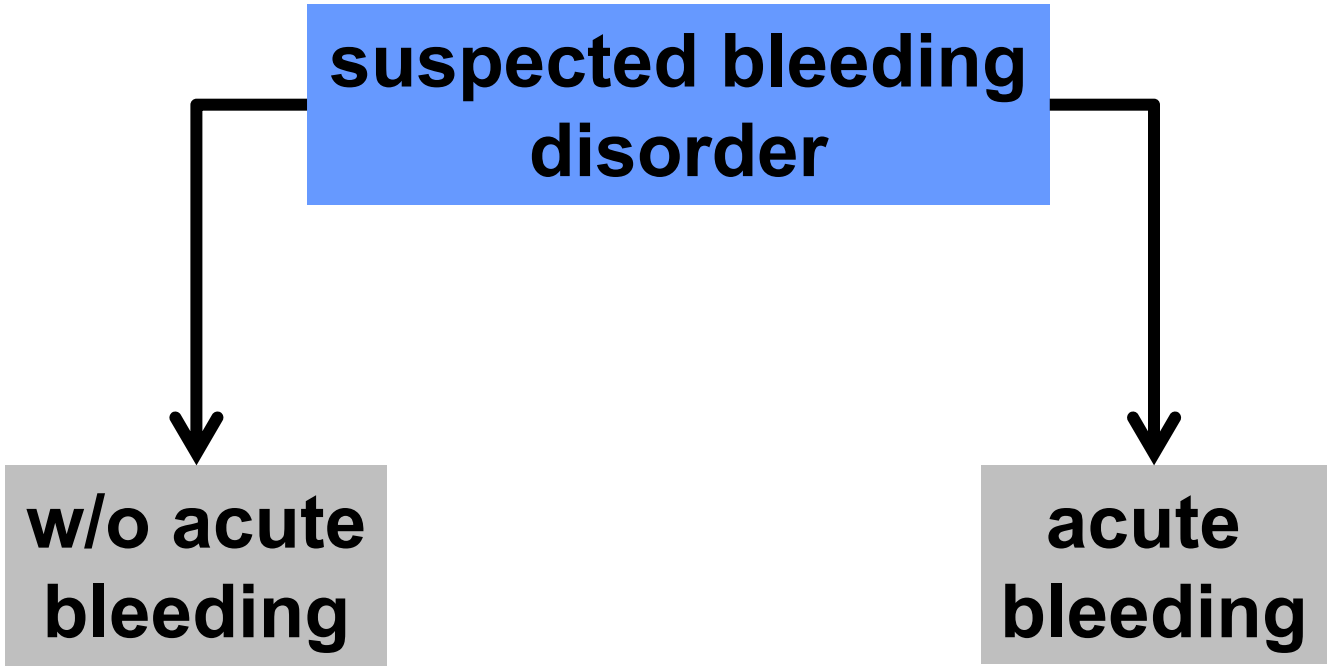
Differential diagnosis

universitäts klinikum bonn



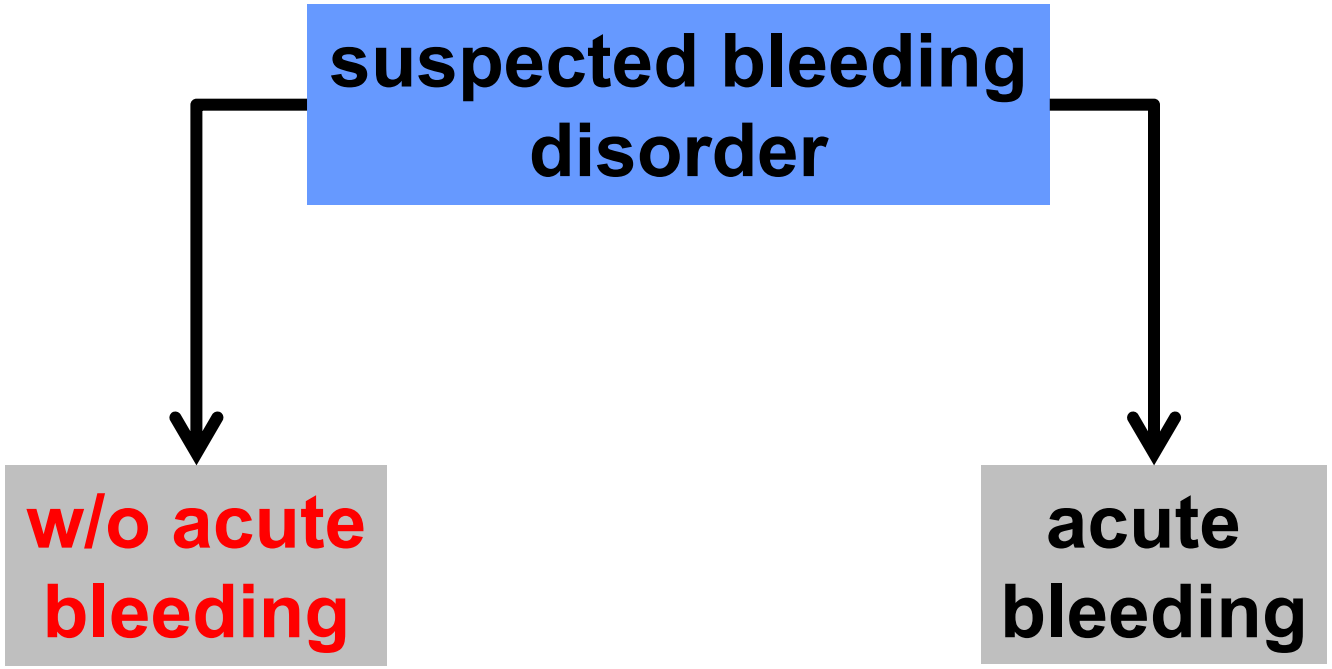
Clinical situations

universitäts klinikum bonn



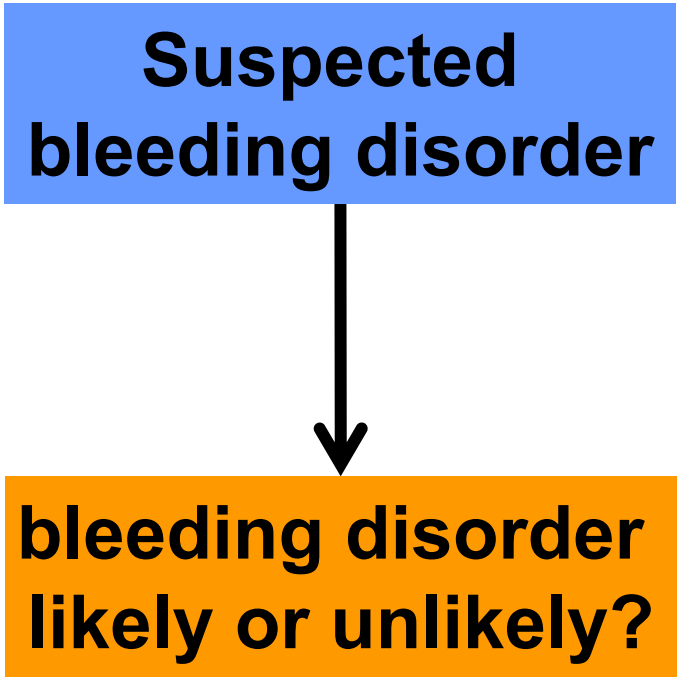
Clinical situations

universitäts klinikum bonn

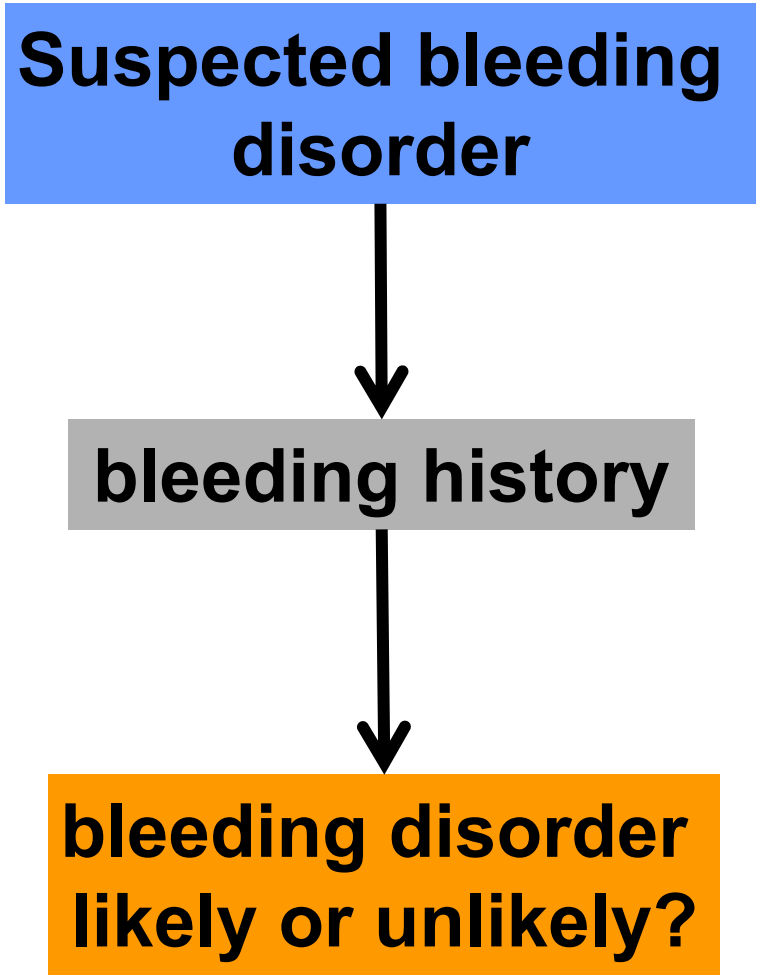


Initial question

universitäts klinikum bonn



Initial work-up (I)



Bleeding history

- type and frequency of bleeding
- provoked or unprovoked
- type of treatment
- family history (family tree)
- drug history

universitäts klinikum bonn

Bleeding history

- usually clear in patients with severe bleeding disorders

- in patients with mild/moderate bleeding symptoms a standardized questionnaire is helpful

- standardized scores to quantitate bleeding symptoms

Bleeding history: scoring key

universitäts klinikum bonn

Symptom	0	1	2	3
Epistaxis	no/trivial < 5/y	> 5/y > 10 min	Packing/ cauterization	transfusion, replacement, DDAVP
Cutaneous	no/trivial < 1 cm	> 1 cm w/h trauma	-	-
Minor wounds	no/trivial < 5/y	> 5/y or > 5 min	Surgical hemostasis	Hemostatic treatment
Oral cavity	no	Reported at least 1	Surgical hemostasis	Hemostatic treatment
Gastro-intestinal tract	no	Identified cause	Surgical hemostasis	Hemostatic treatment

Bleeding history: scoring key

universitäts klinikum bonn

Symptom	-1	0	1	2	3
Tooth extraction	No bleeding in 2	None done or no bleeding in 1	reported	Resuturing, repacking or antifibrinolytics	Transfusion, replacement, DDAVP
Surgery	No bleeding in 2	None done or no bleeding in 1	reported	Surgical hemostasis or antifibrinolytics	Transfusion, replacement, DDAVP
Muscle hematoma	-	never	Post-trauma, no therapy	Spontaneous, no therapy	Spontaneous requiring treatment
Hemarthrosis	-	never	Post-trauma, no therapy		Spontaneous
CNS	-	never	-	-	Subdural, intracerebral

universitäts klinikum bonn

Validated questionnaire[1,2]

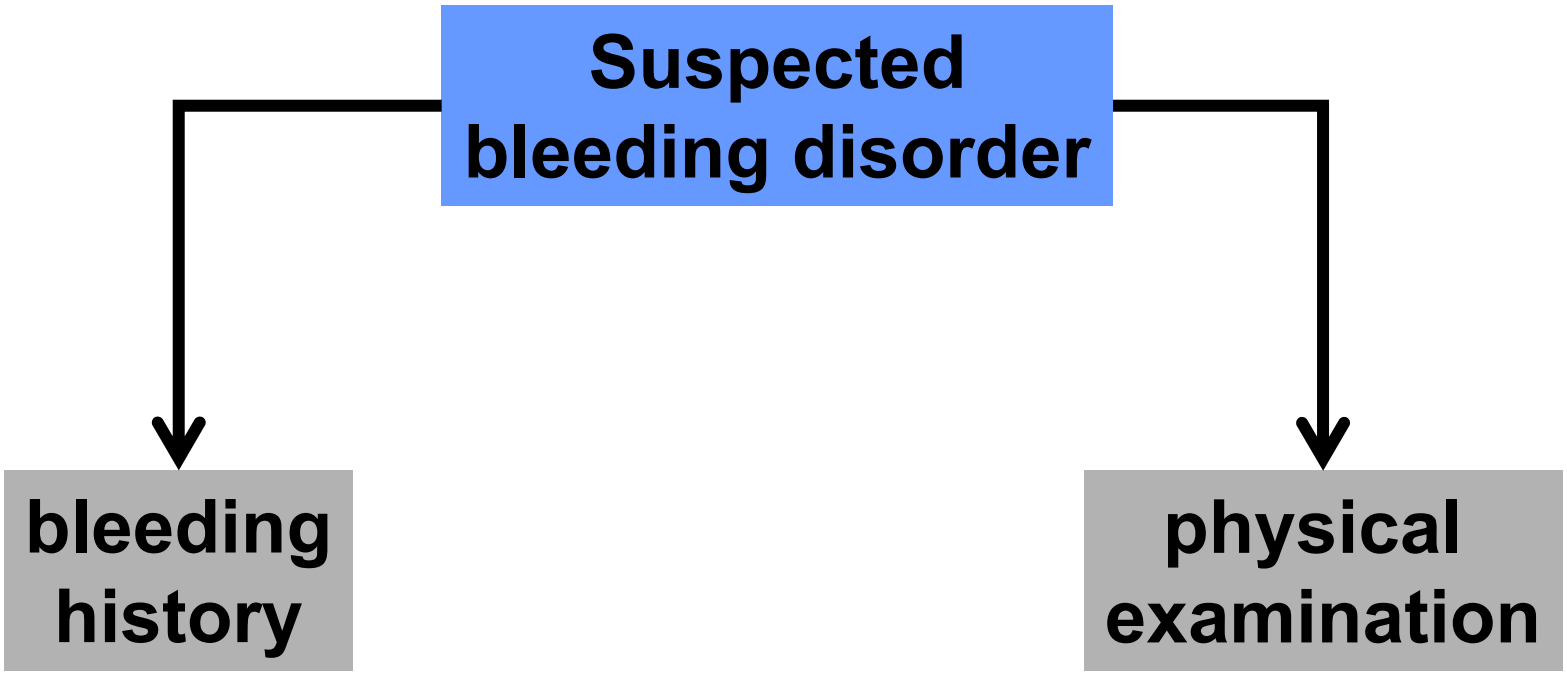
- includes 13 bleeding symptoms
- provides a summative score
- mean bleeding scores:
  in healthy individuals: 0.5
  abnormal: ≥ 2

---

[1]Biss TT, et al. J Thromb Haemost 2010; 8: 950
[2]Biss TT, et al. J Thromb Haemost 2010; 8: 1416

Initial work up (II)

universitäts klinikum bonn

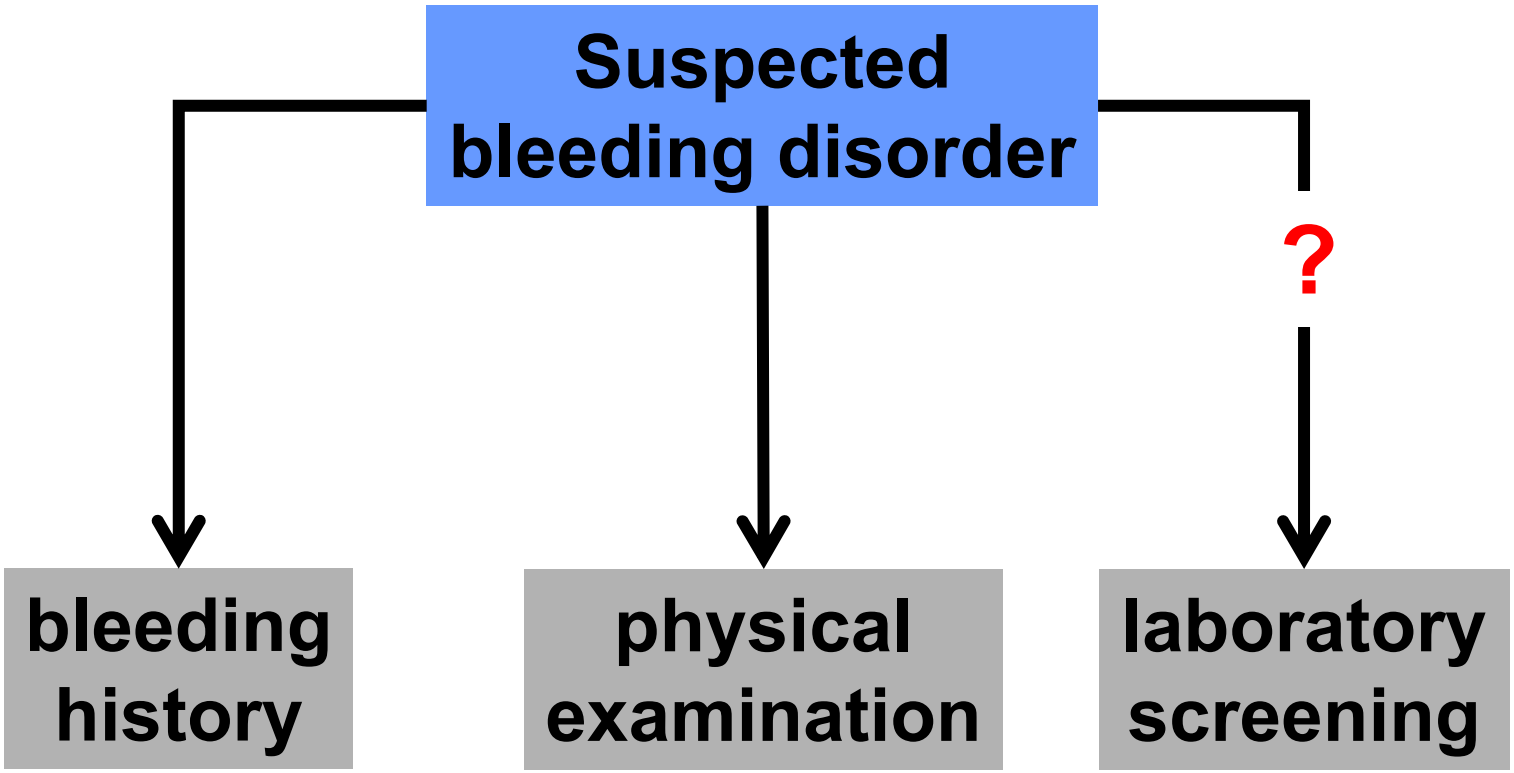


universitäts klinikum bonn

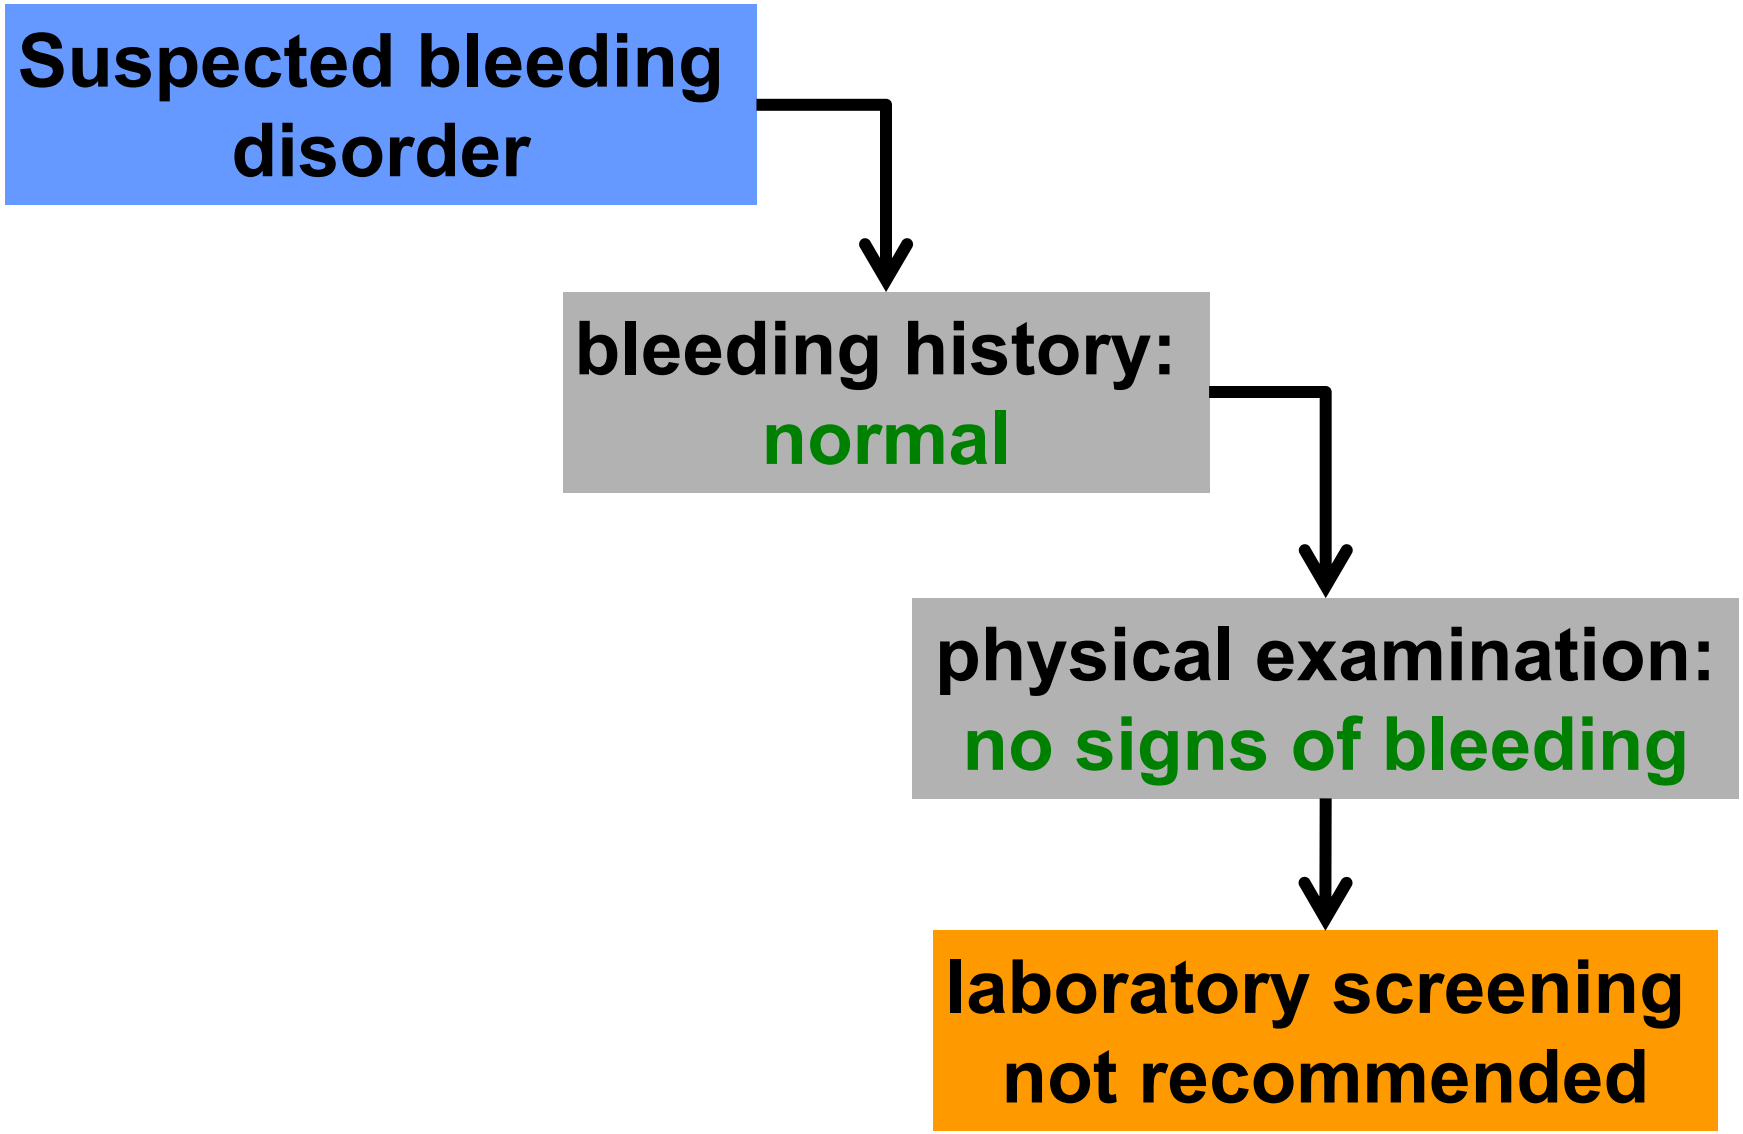
Physical examination

- inspection for any bleeding signs
- joint abnormalities
- lymphadenopathy
- organomegalies
- in children: signs of nonaccidental trauma!

Initial work up (III)



Decision pathway (I)



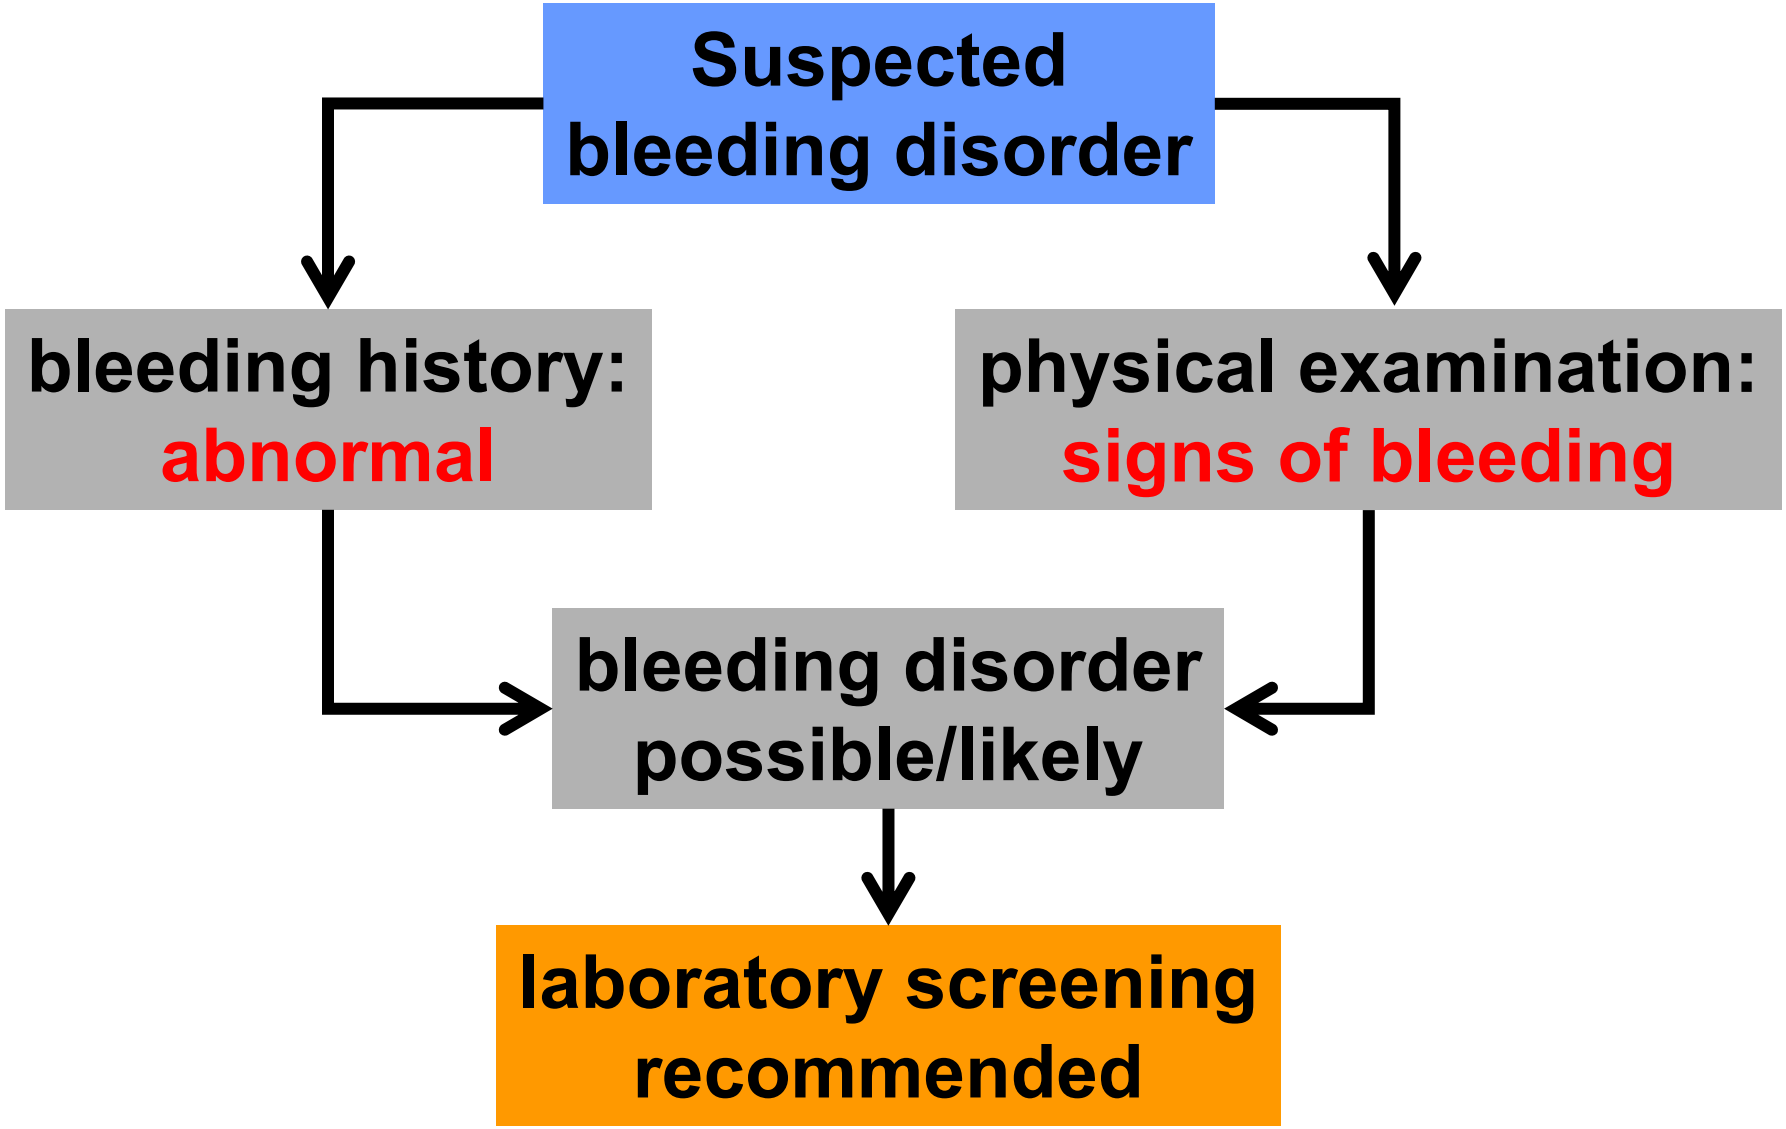
Take home message (I)

- Thorough personal and family histories are the best screening tests for identifying potential hemostatic problems.

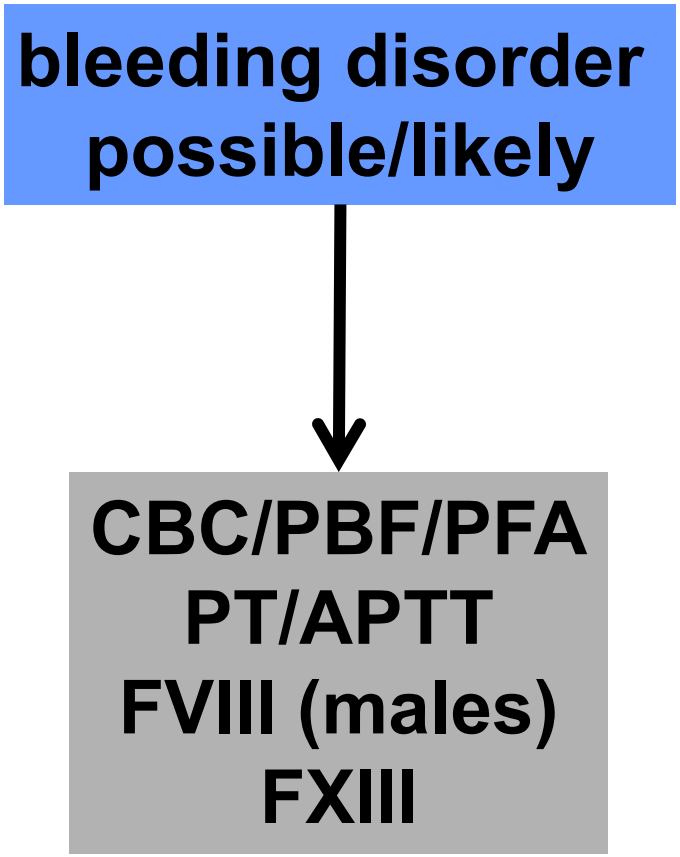
- Properly obtained histories eliminate the need for laboratory screening procedures.

Decision pathway (II)

universitäts klinikumbonn



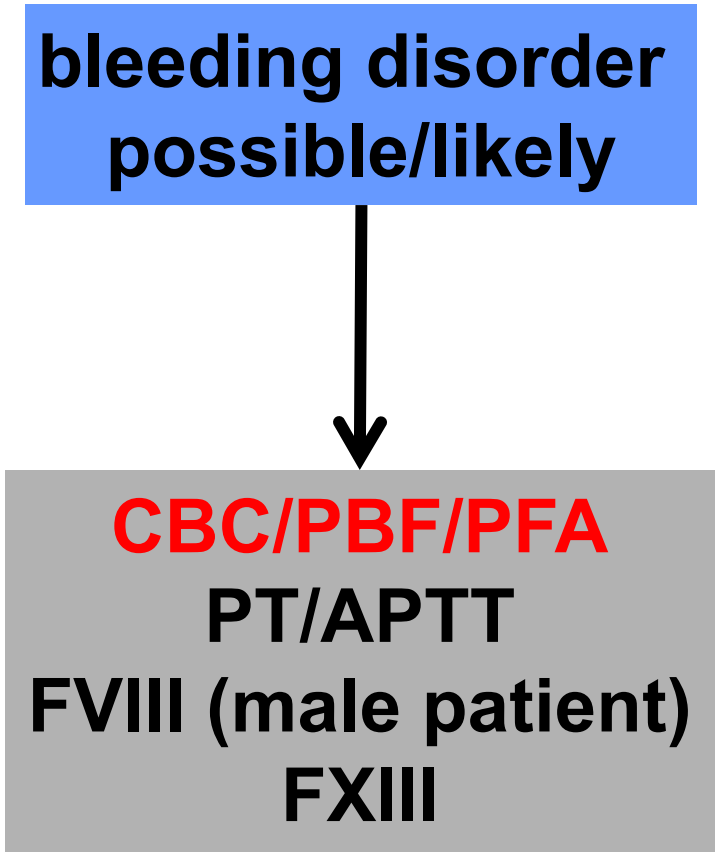
Screening parameters



CBC, complete blood count; PBF, peripheral blood film; PFA, platelet function analyser; PT, prothrombin time; APTT, activated partial thromboplastin time

Screening parameters

universitäts klinikum bonn



CBC/PBF/PFA

universitäts klinikum bonn

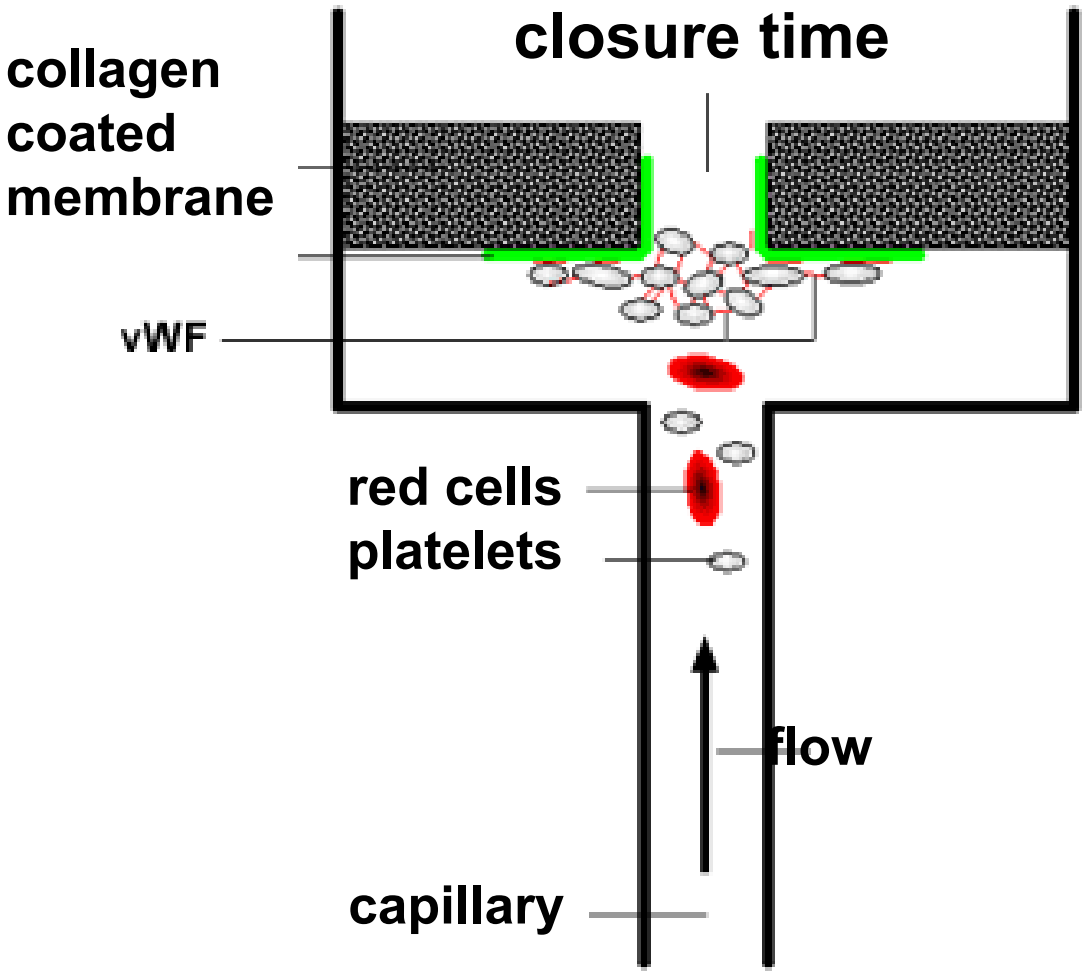
CBC/PBF:

- platelet count, size and morphology
- leukocyte morphology
- other cytopenias

PFA:

- axis subendothelium-vWF-platelet
- platelet-platelet interaction

Platelet function analyser (PFA)



universitäts klinikumbonn

CBC/PBF/PFA: pitfalls

CBC:

- **pseudothrombocytopenia**

PFA:

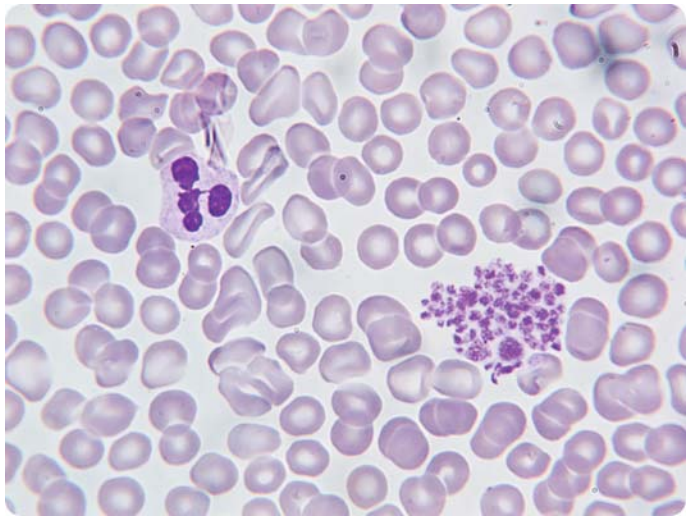
- **hematocrit < 35**

Pseudothrombocytopenia

universitäts klinikum bonn

- EDTA-induced agglutination of platelets

- w/o clinical relevance

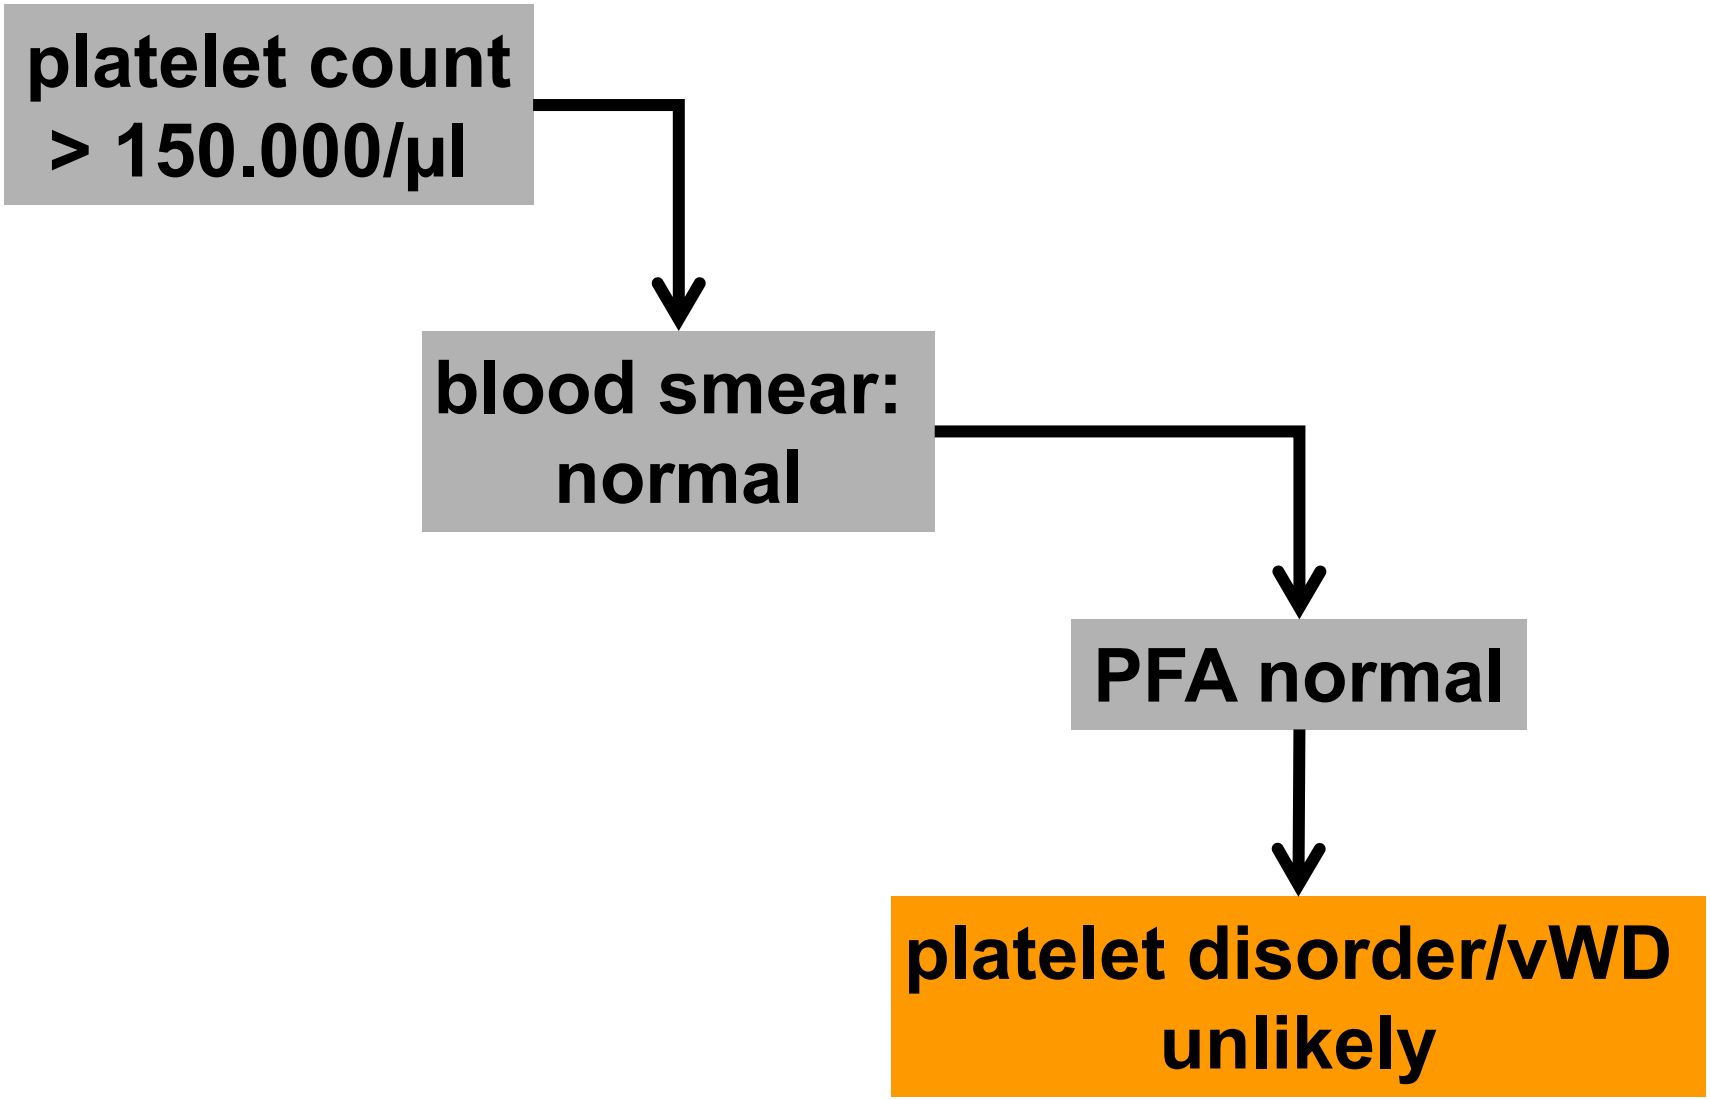


ASH et al. Blood 2011;117:4168-4168

- confirmed by platelet counting using citrate anticoagulated blood

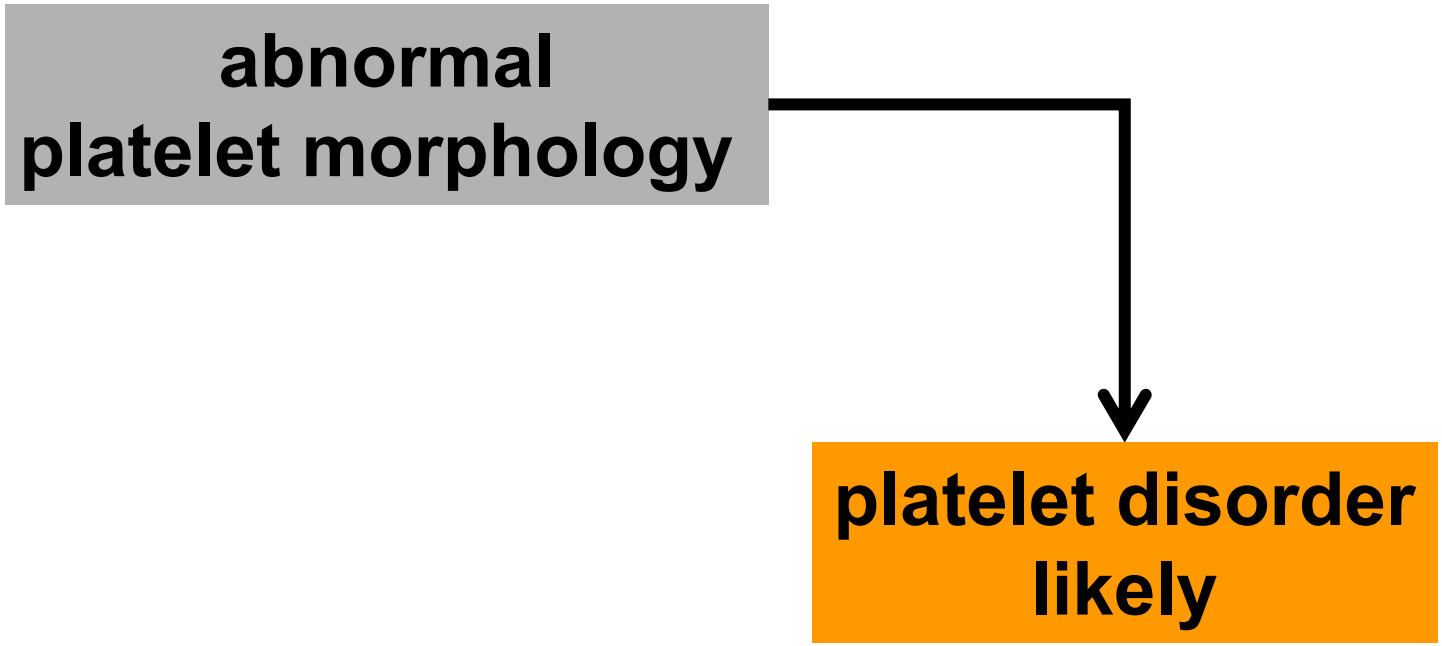
Decision finding (III)

universitäts klinikum bonn



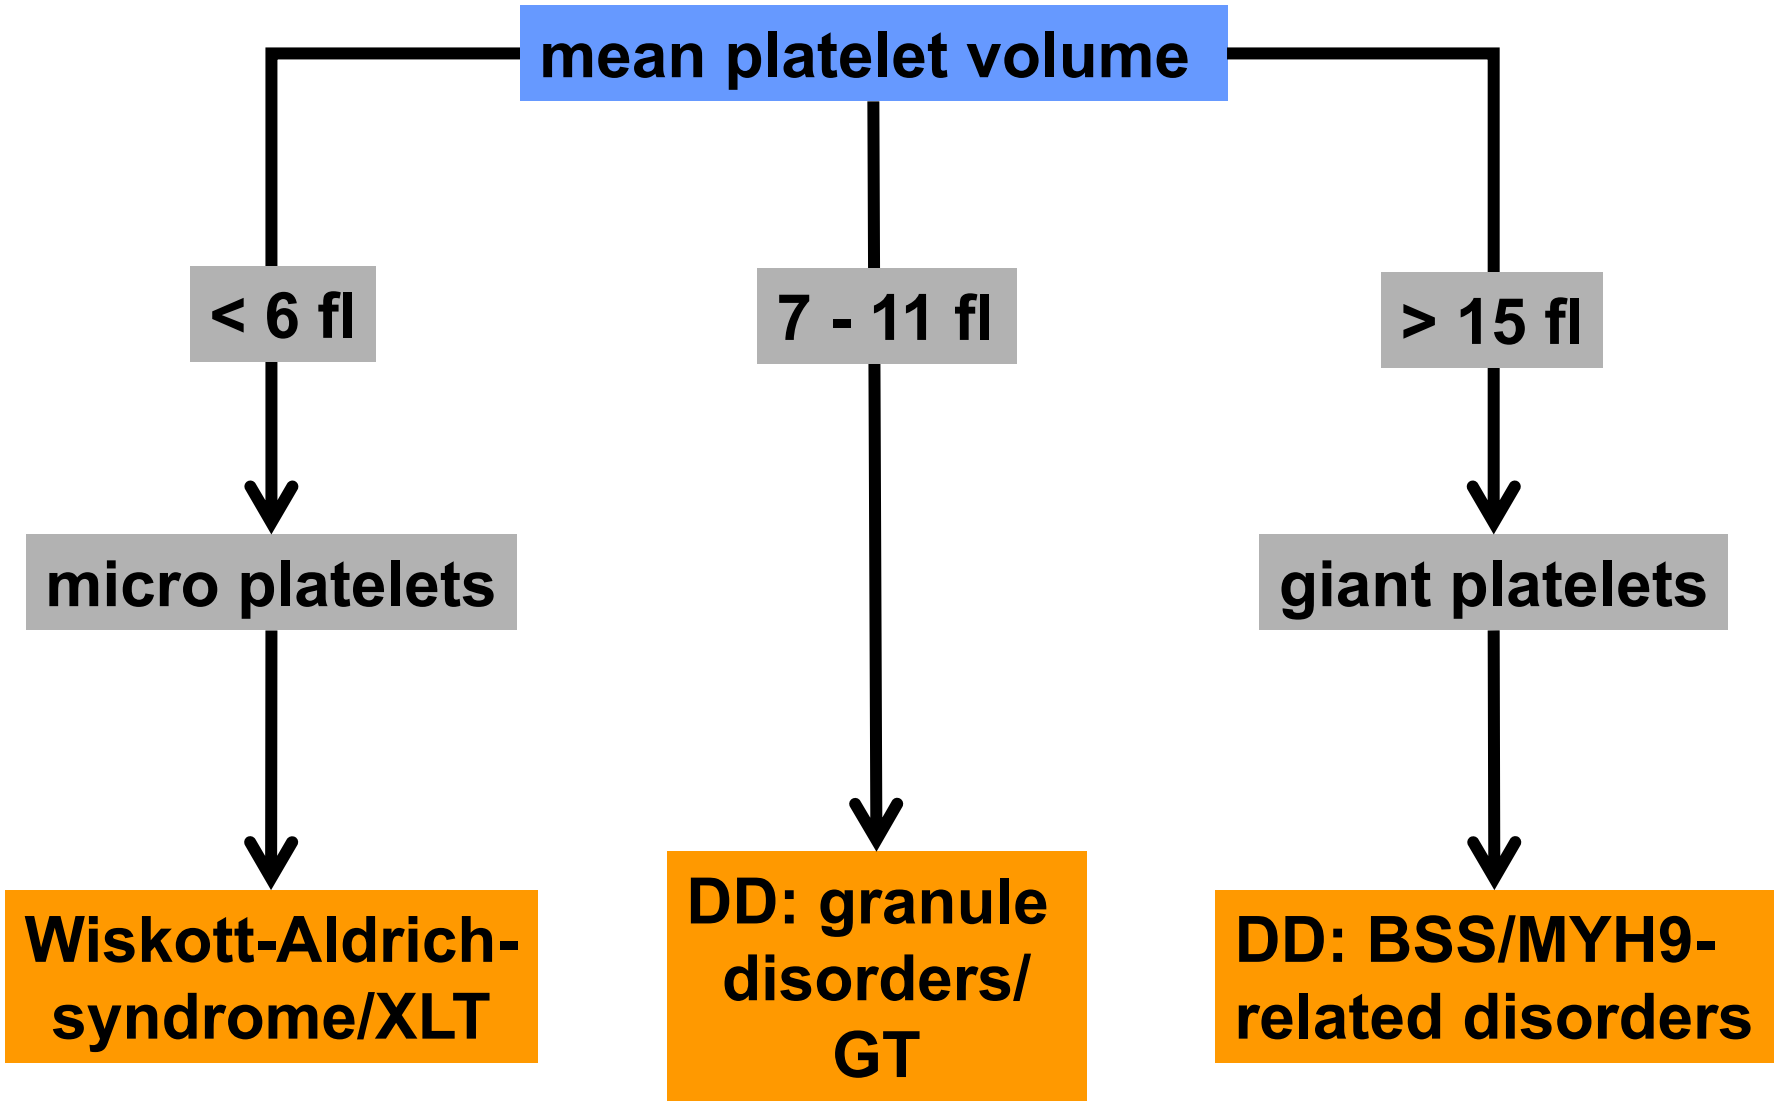
universitäts klinikum bonn

Decision finding (IV)



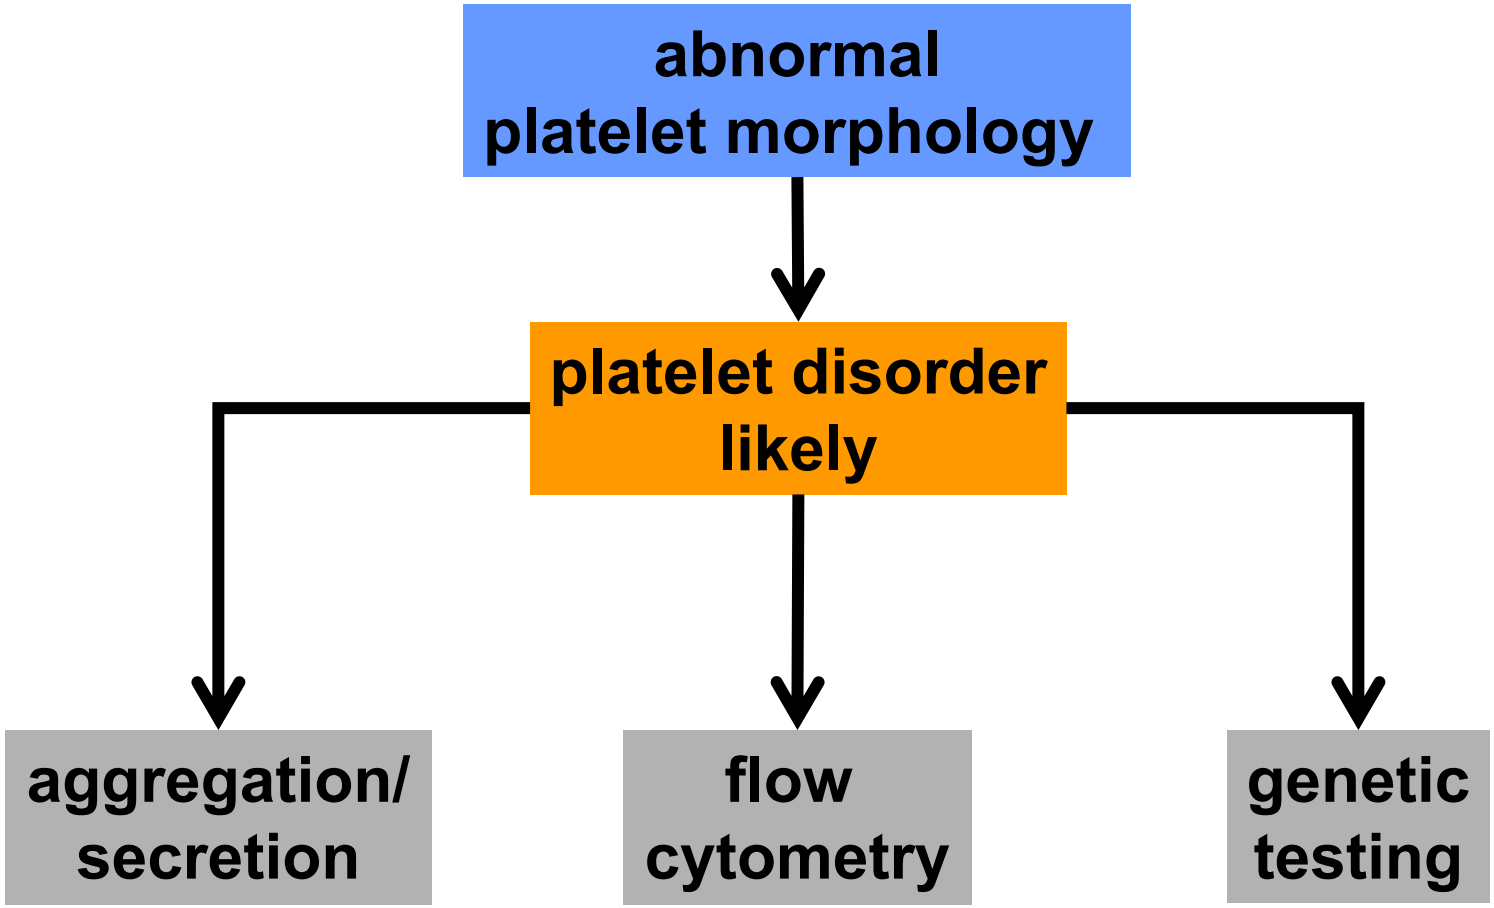
DD: Platelet disorder

universitätsklinikumbonn



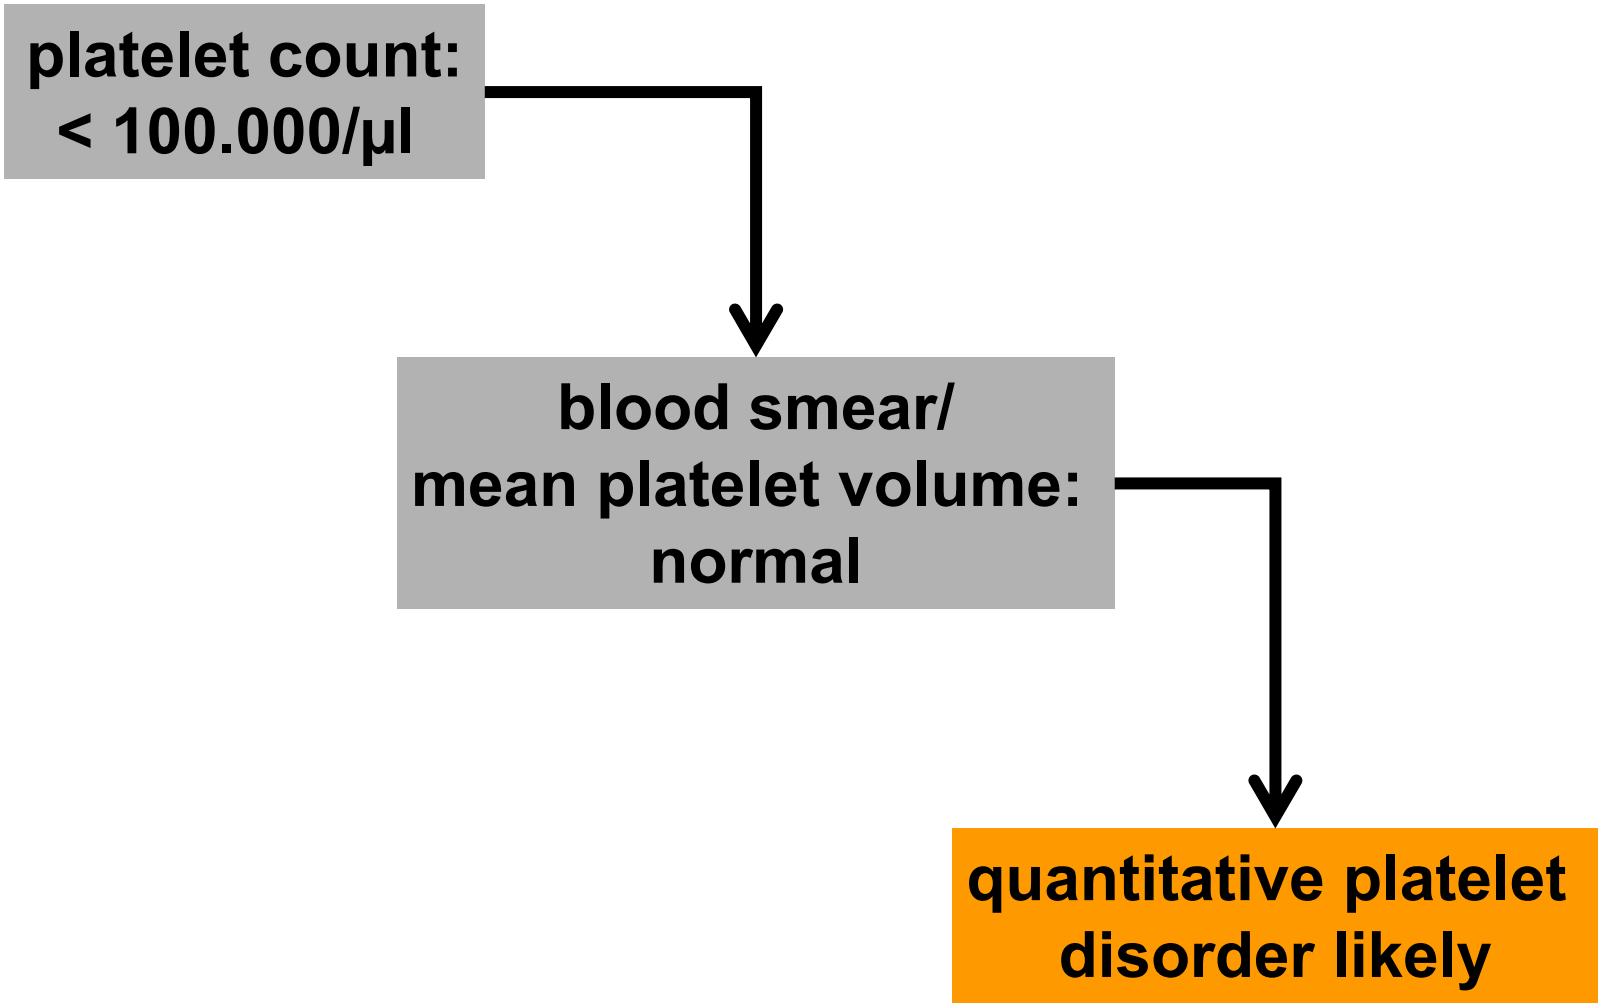
universitätsklinikumbonn

Confirmatory procedures



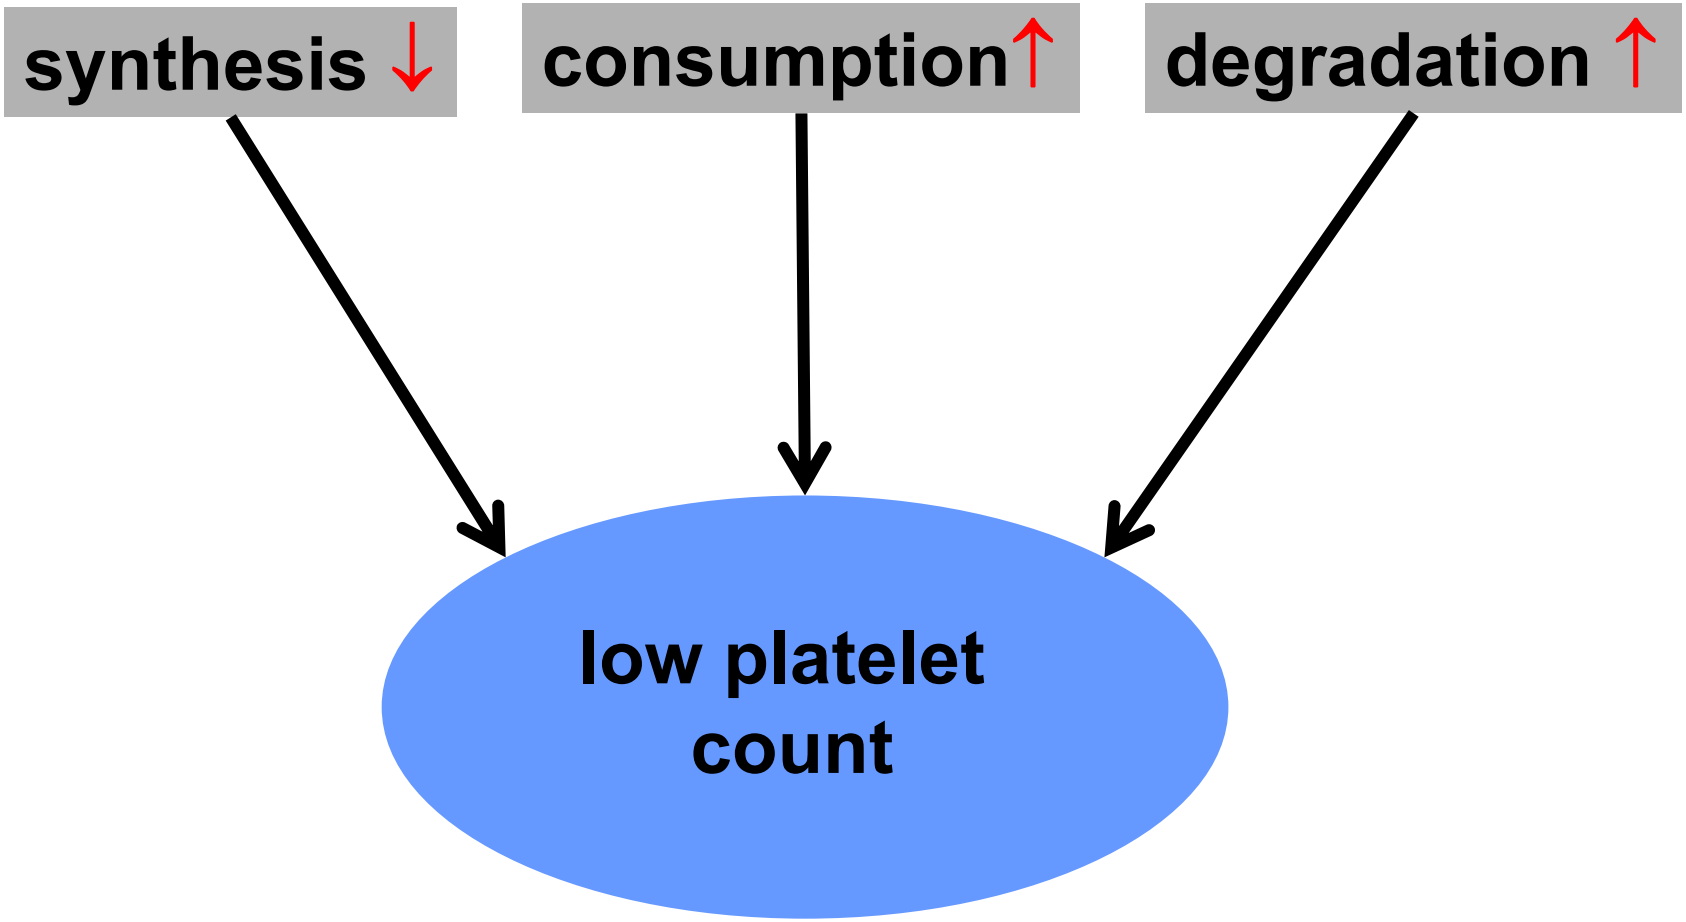
Decision finding (V)

universitäts klinikum bonn



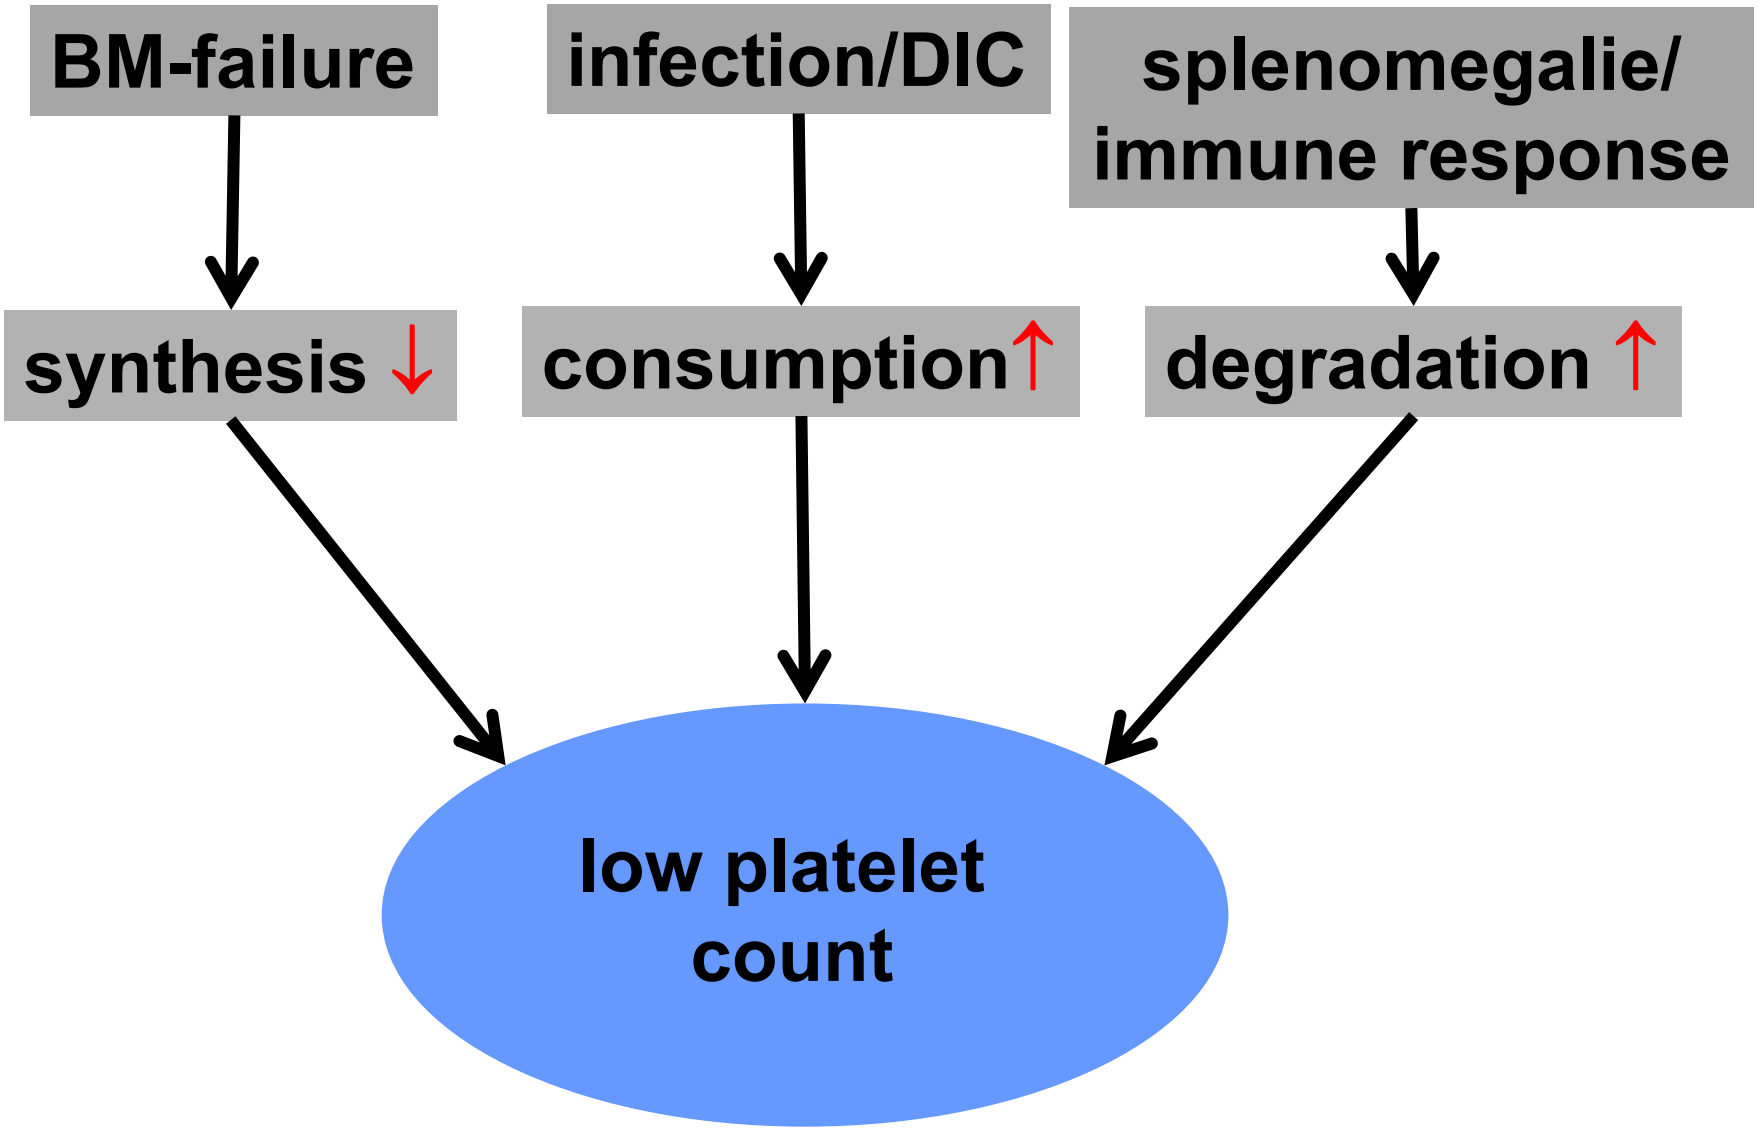
Isolated thrombocytopenia

universitäts klinikum bonn



Isolated thrombocytopenia

universitäts klinikum bonn



universitäts klinikumbonn

Additional information

- isolated versus combined
- new onset or chronic
- signs of organomegalie
- drug history
- previous infections

Additional information

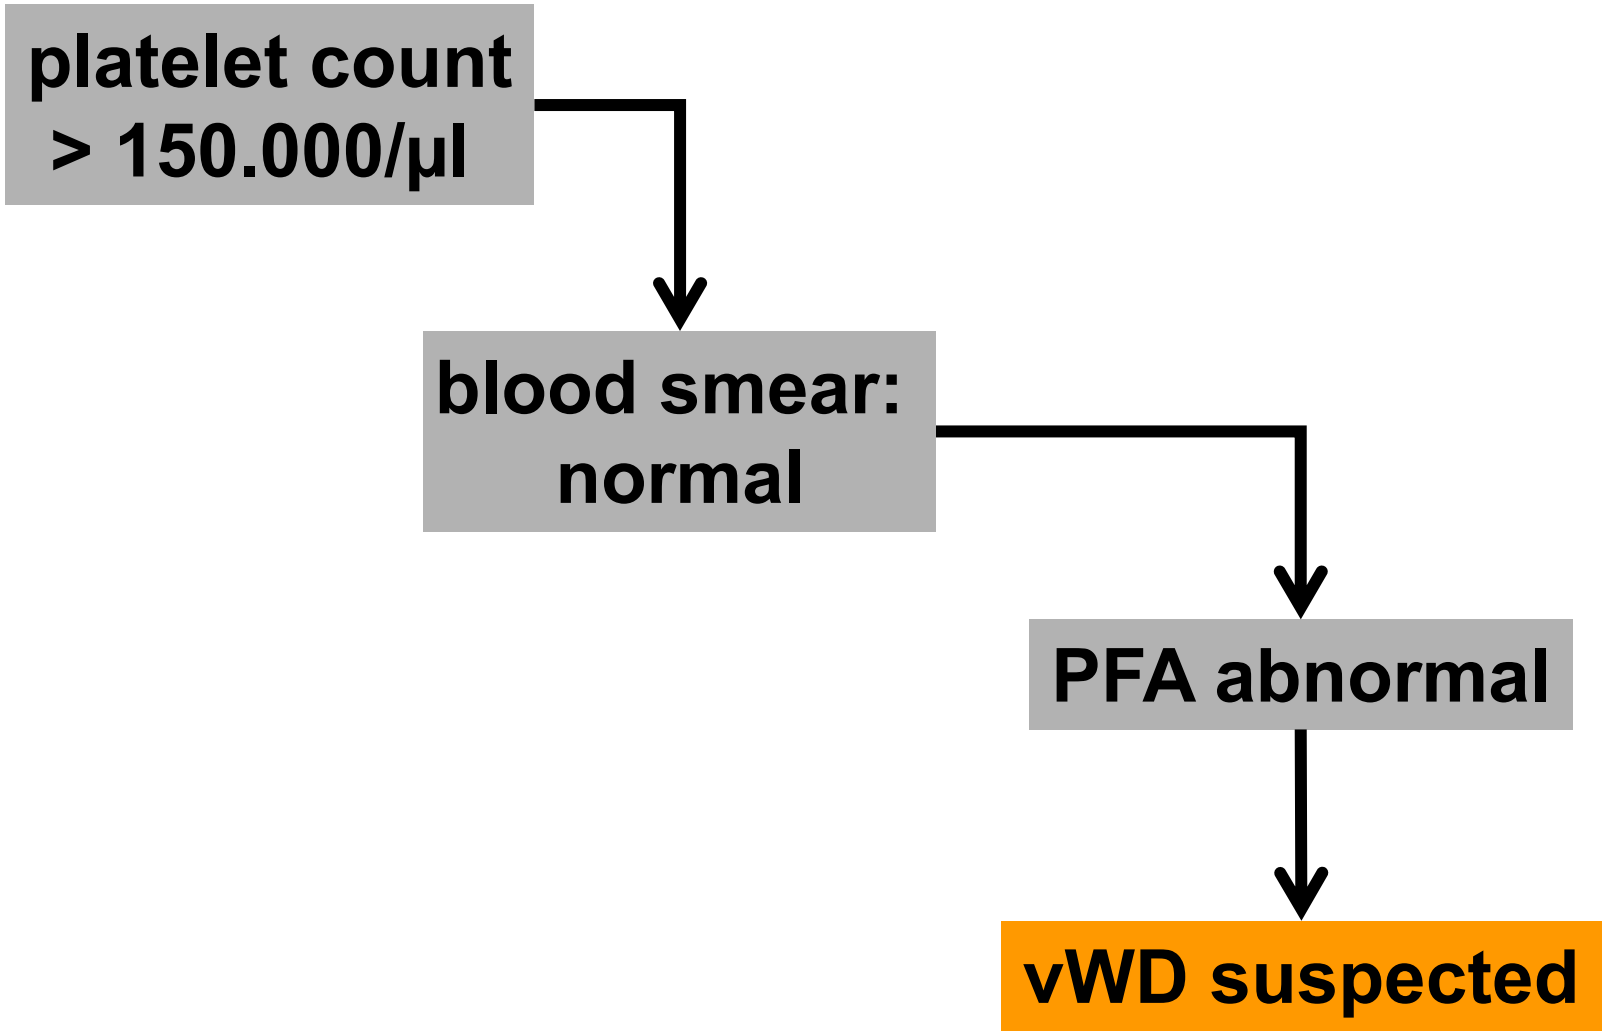
universitäts klinikum bonn

- **isolated versus combined**
- **new onset or chronic**
- **no signs of organomegalie**
- **no drug intake**
- **previous infections**

➔ **immune thrombocytopenia suspected**

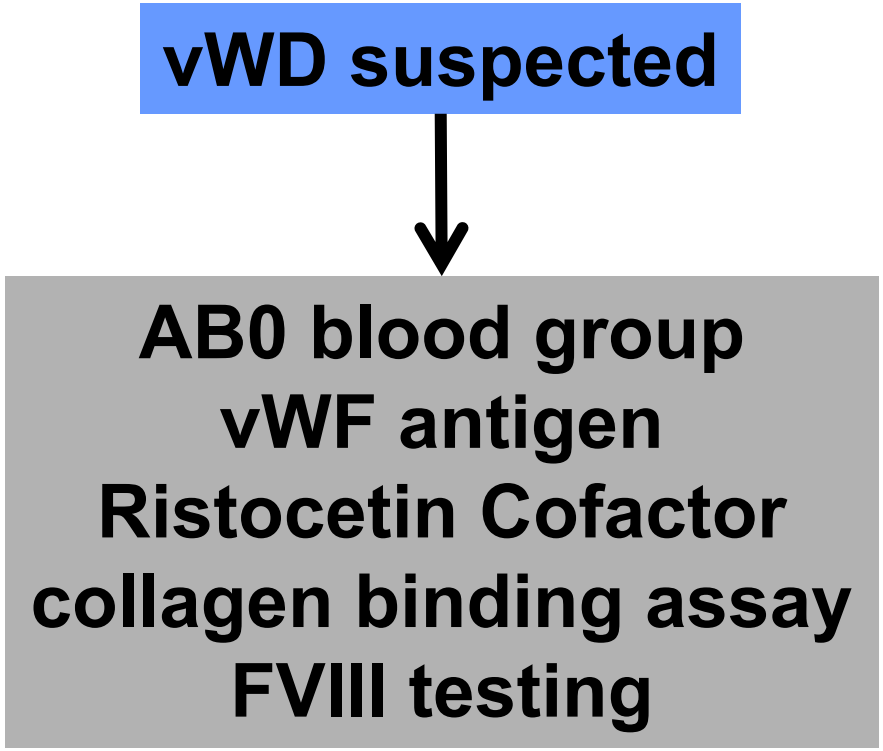
Decision finding (VI)

universitäts klinikum bonn



Confirmatory procedures

universitäts klinikum bonn



Confirmatory procedures

universitäts klinikumbonn

vWD suspected

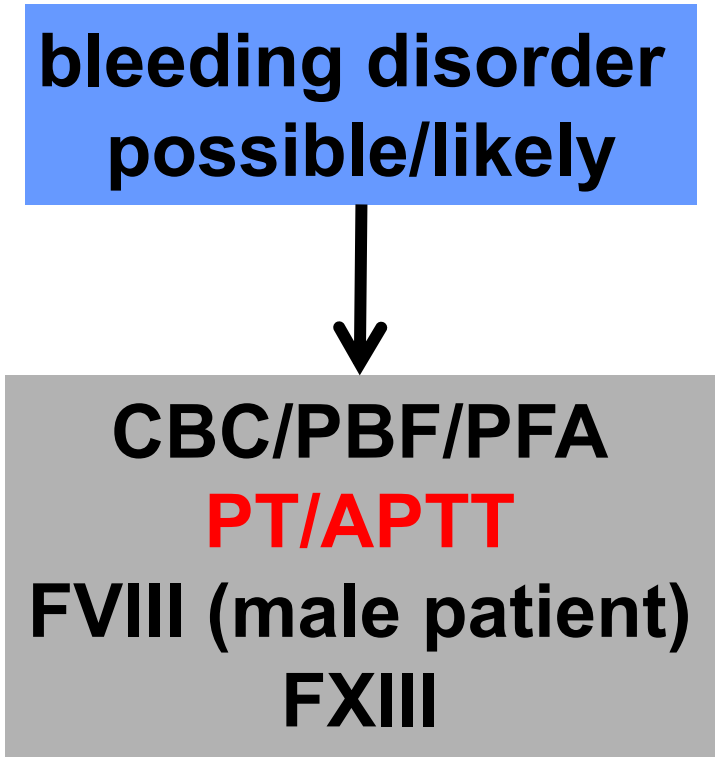
↓

AB0 blood group
vWF antigen
Ristocetin Cofactor
collagen binding assay
FVIII testing

genetic testing
vWF-multimeric analysis
propeptide analysis

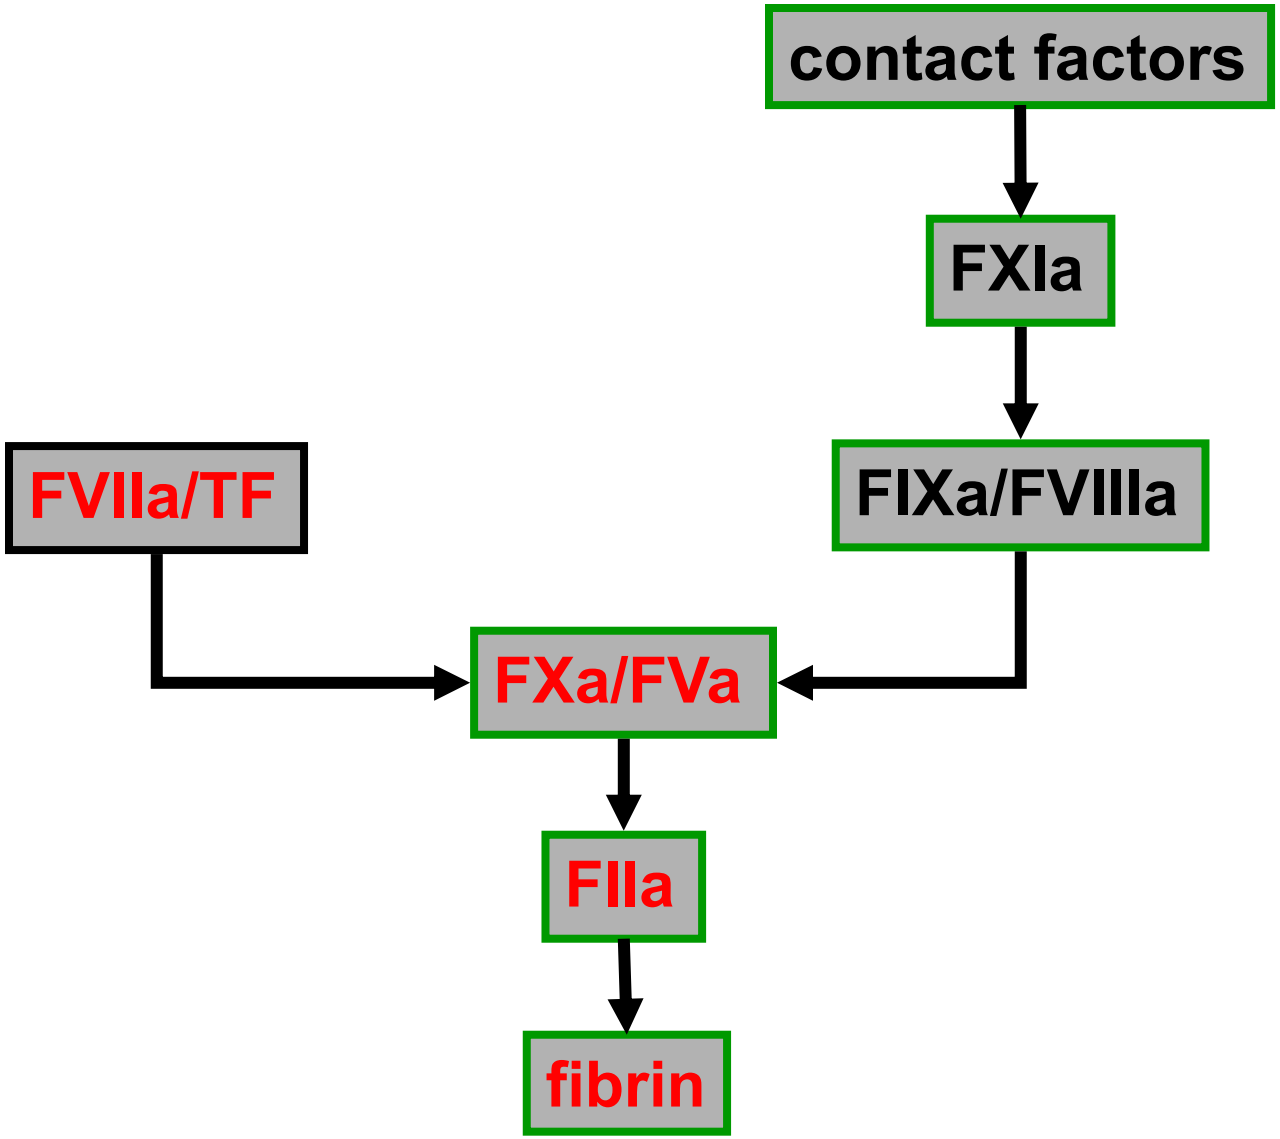
Screening parameters

universitäts klinikum bonn

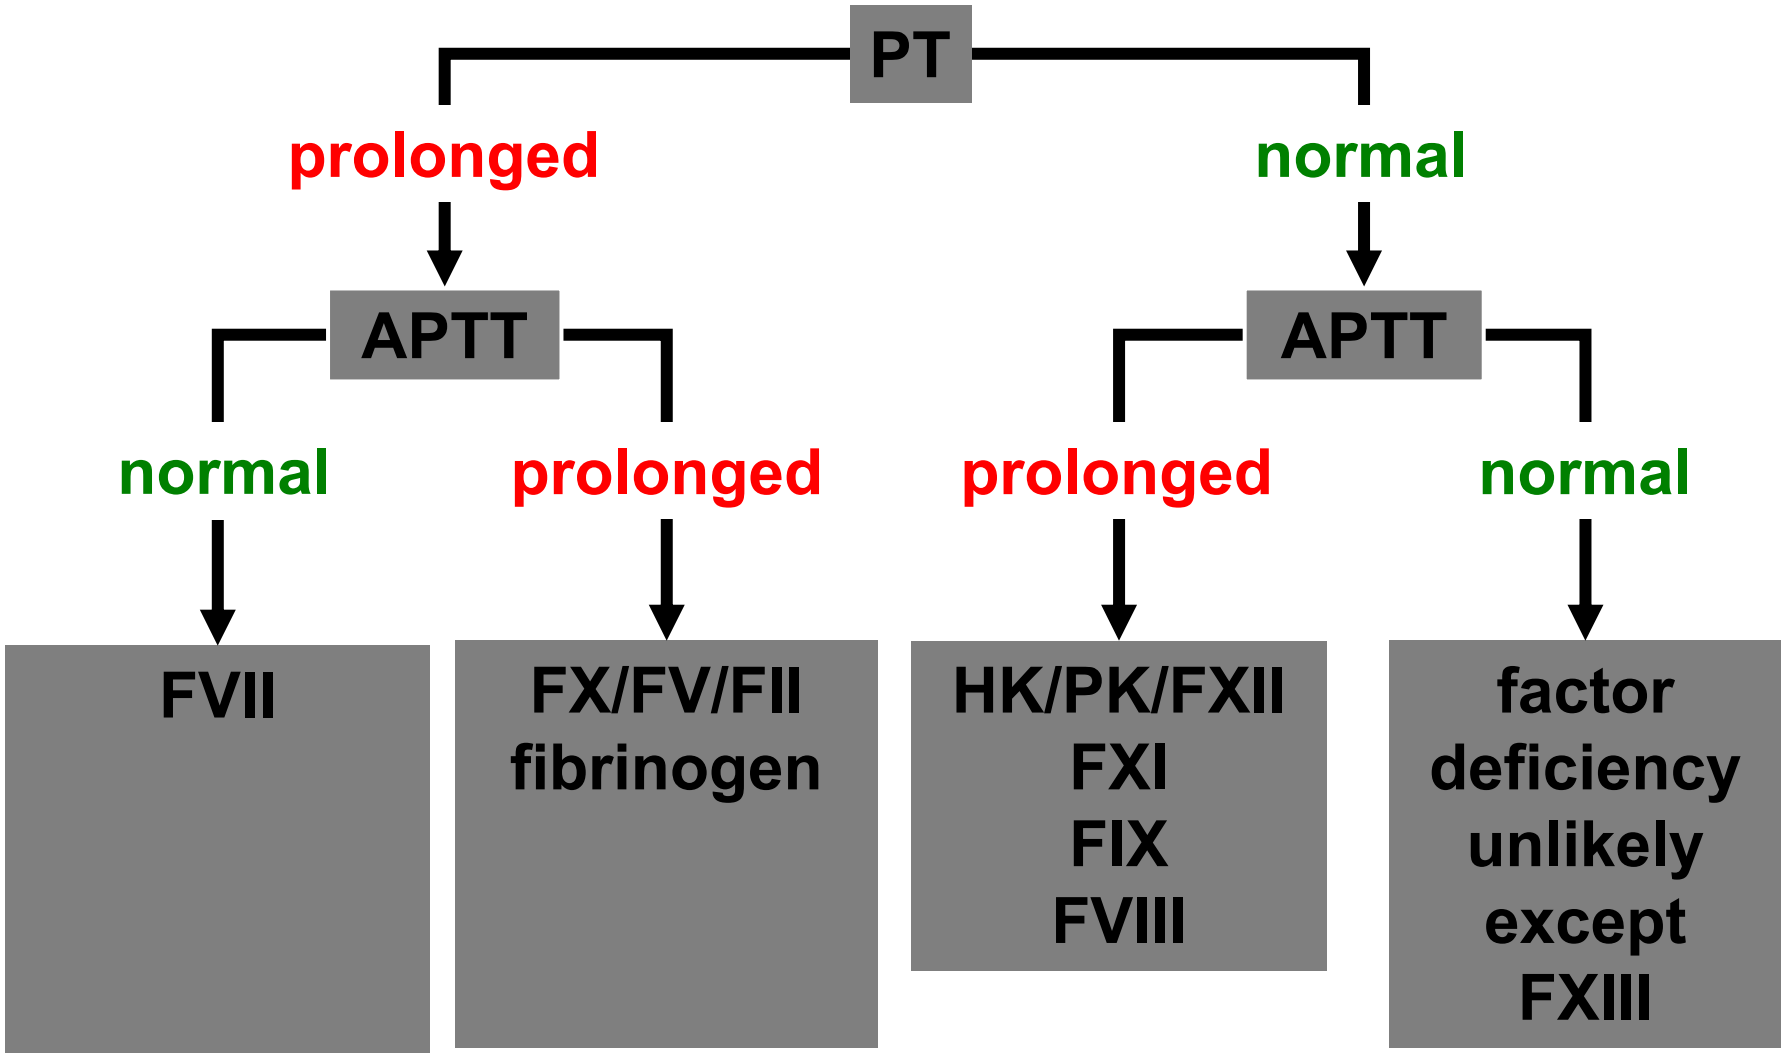


PT versus APTT

universitäts klinikum bonn

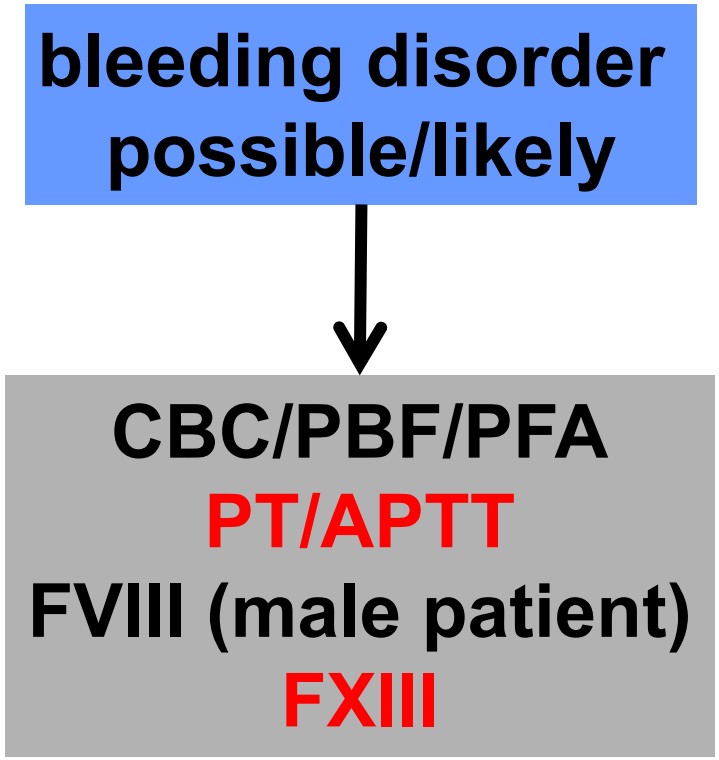


DD: single factor deficiencies

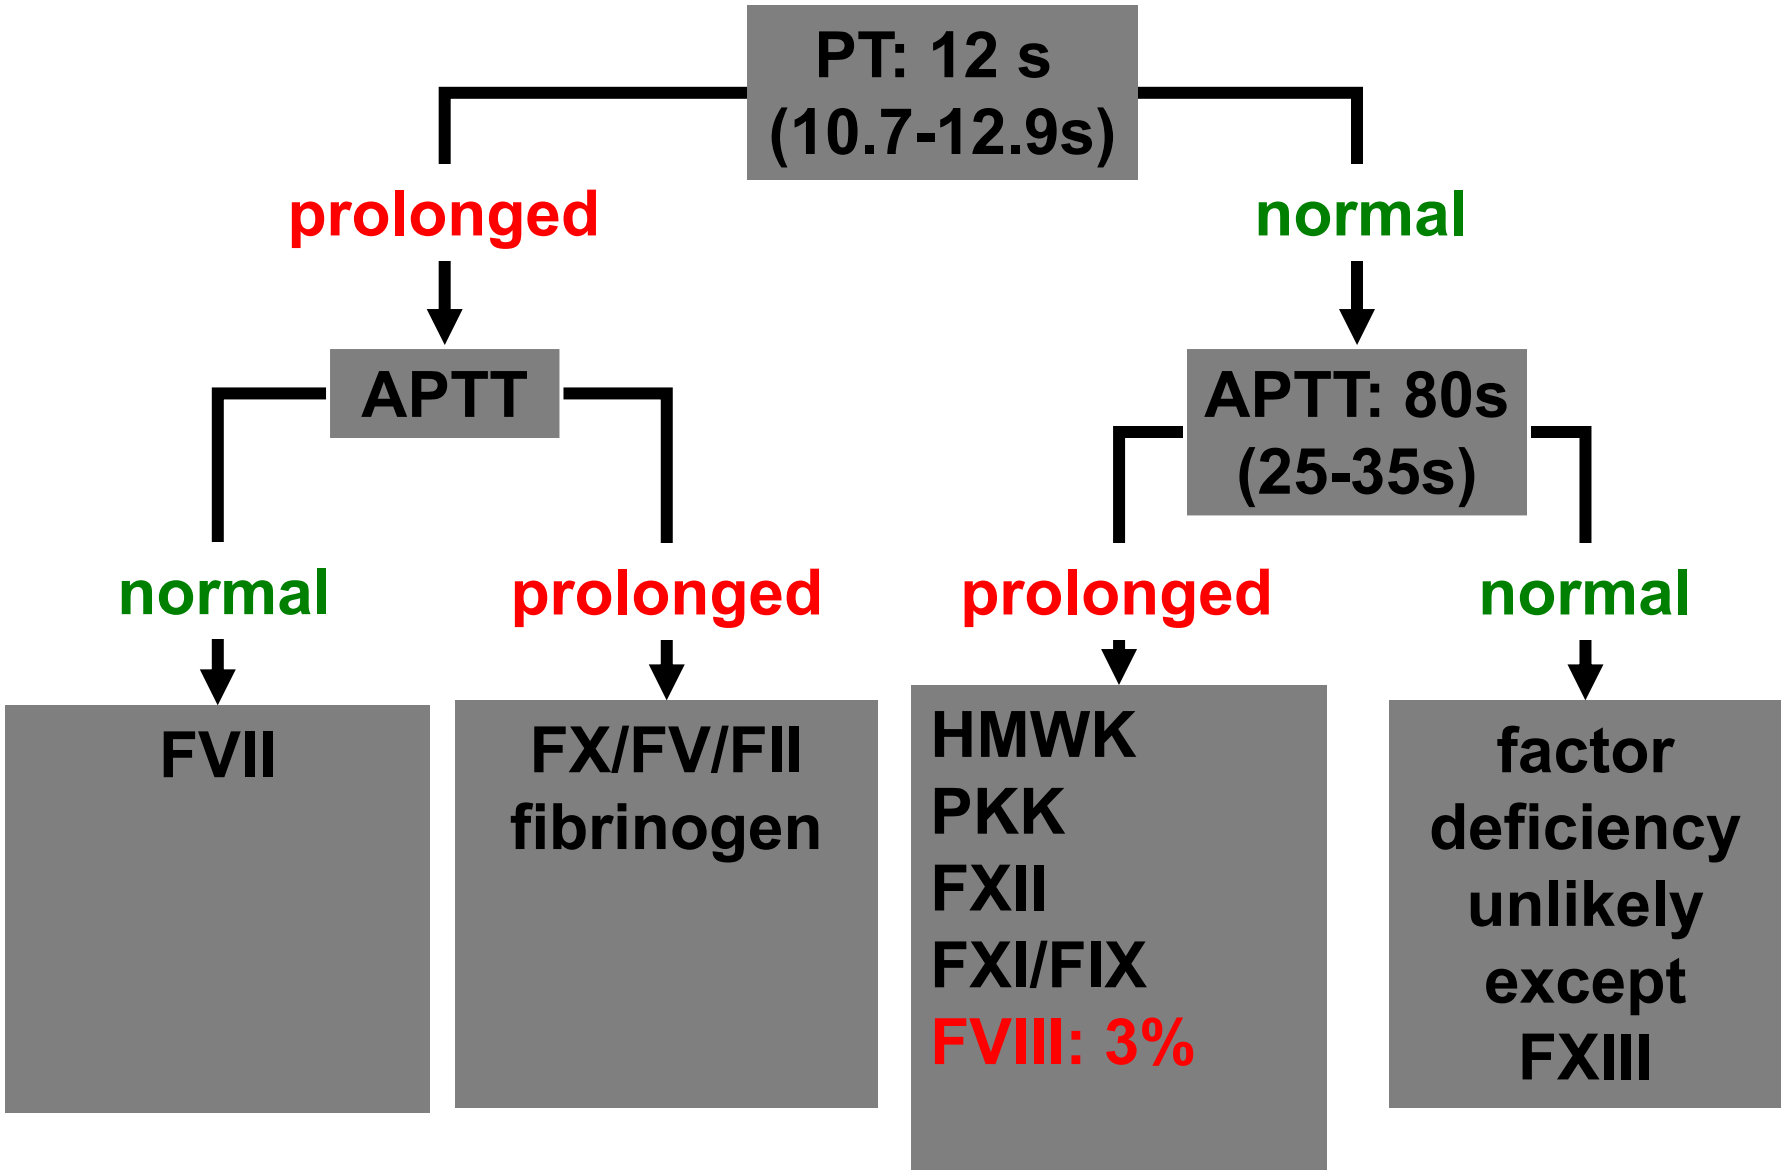


Screening parameters

universitäts klinikum bonn

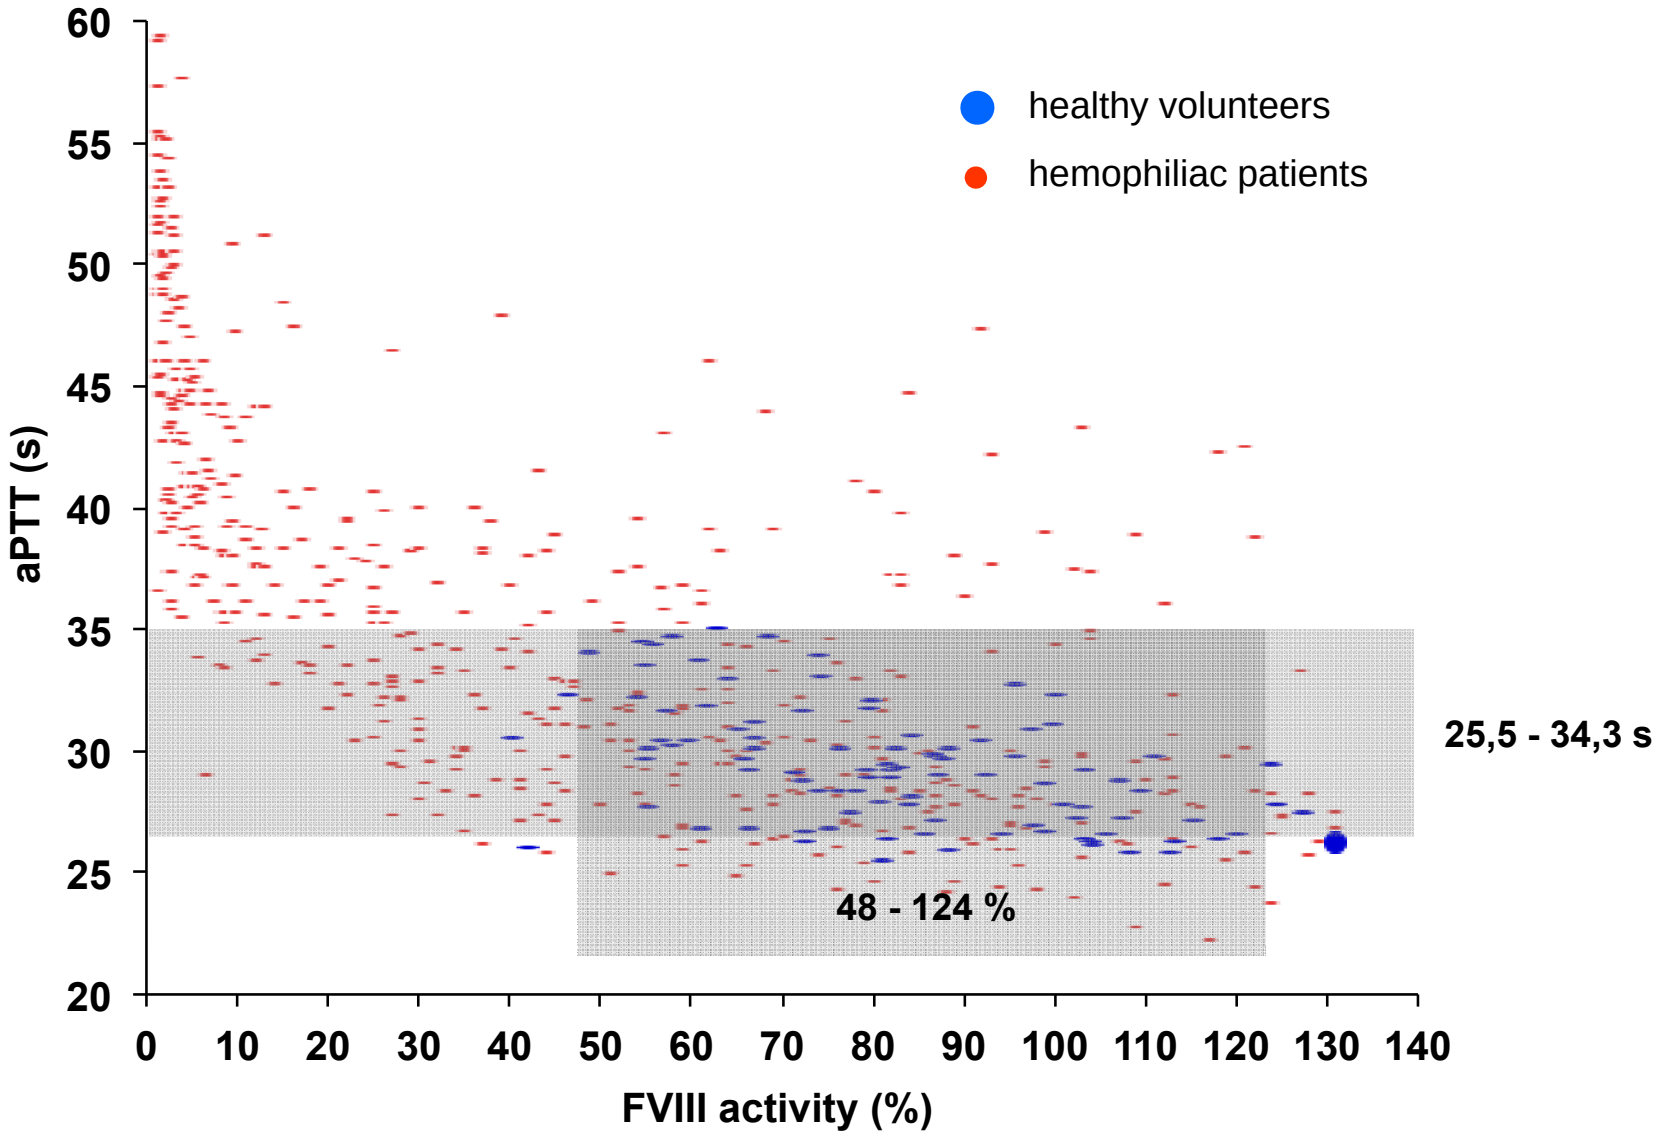


Hemophilia A pattern



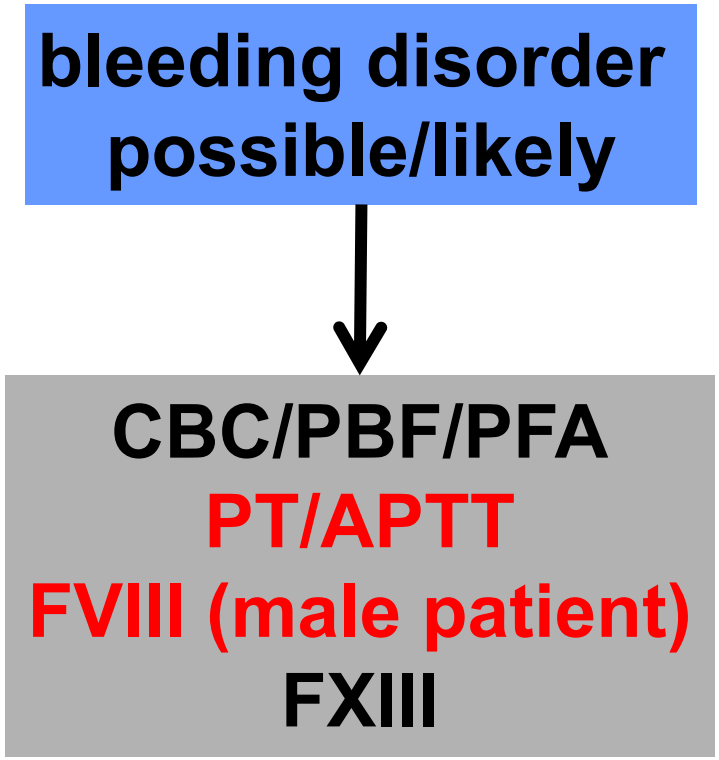
APTT versus FVIII (one stage)

universitäts klinikum bonn



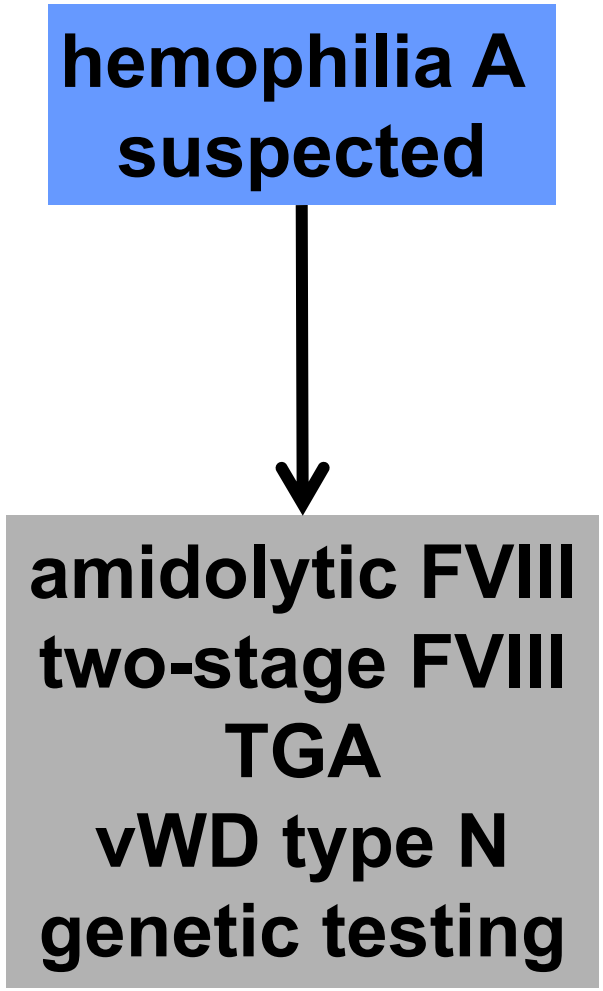
Screening parameters

universitäts klinikum bonn



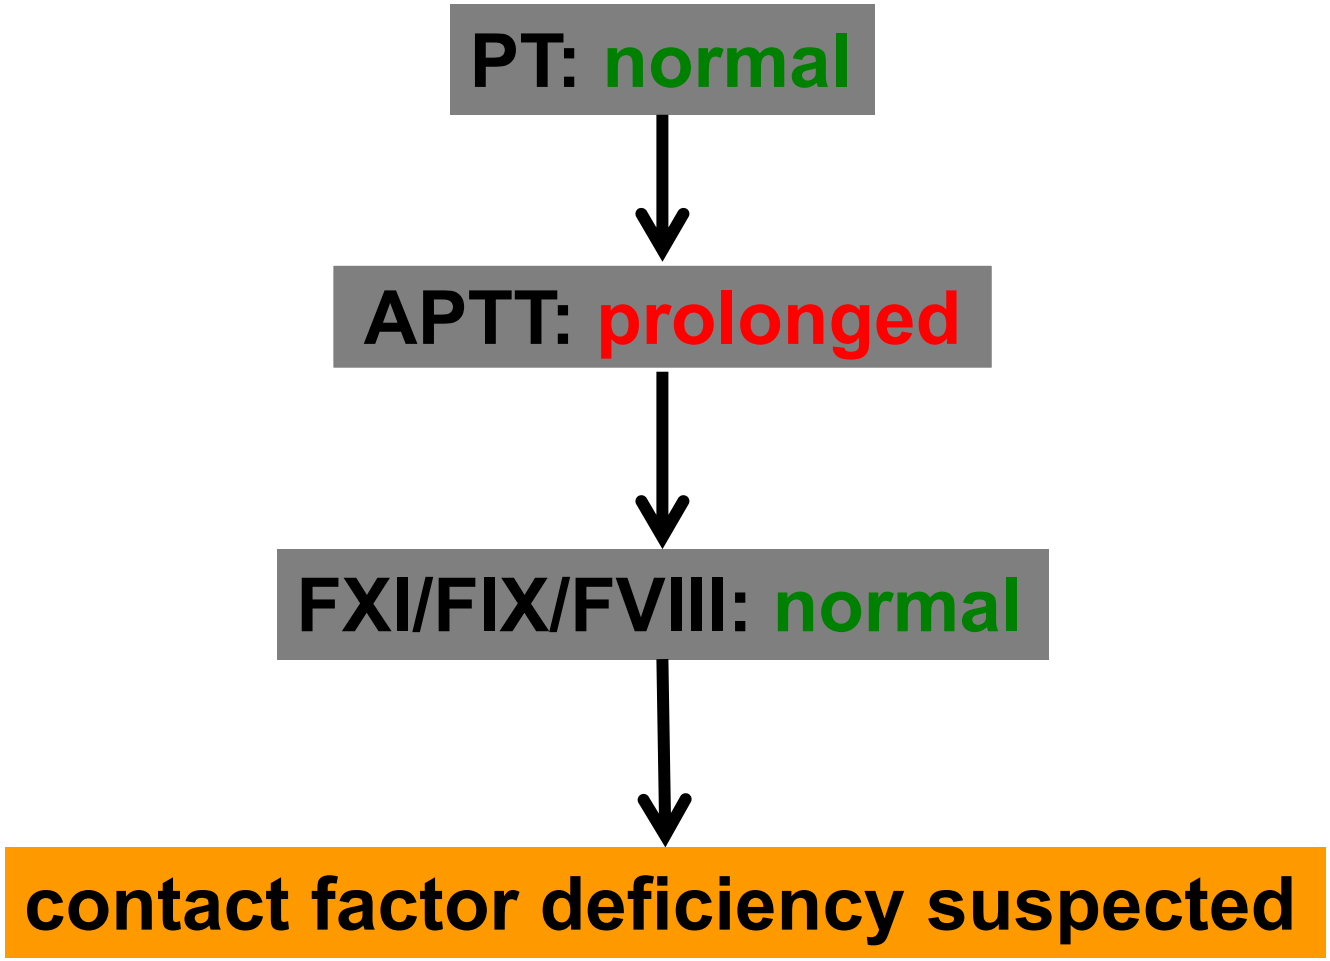
Confirmatory procedures

universitäts klinikum bonn



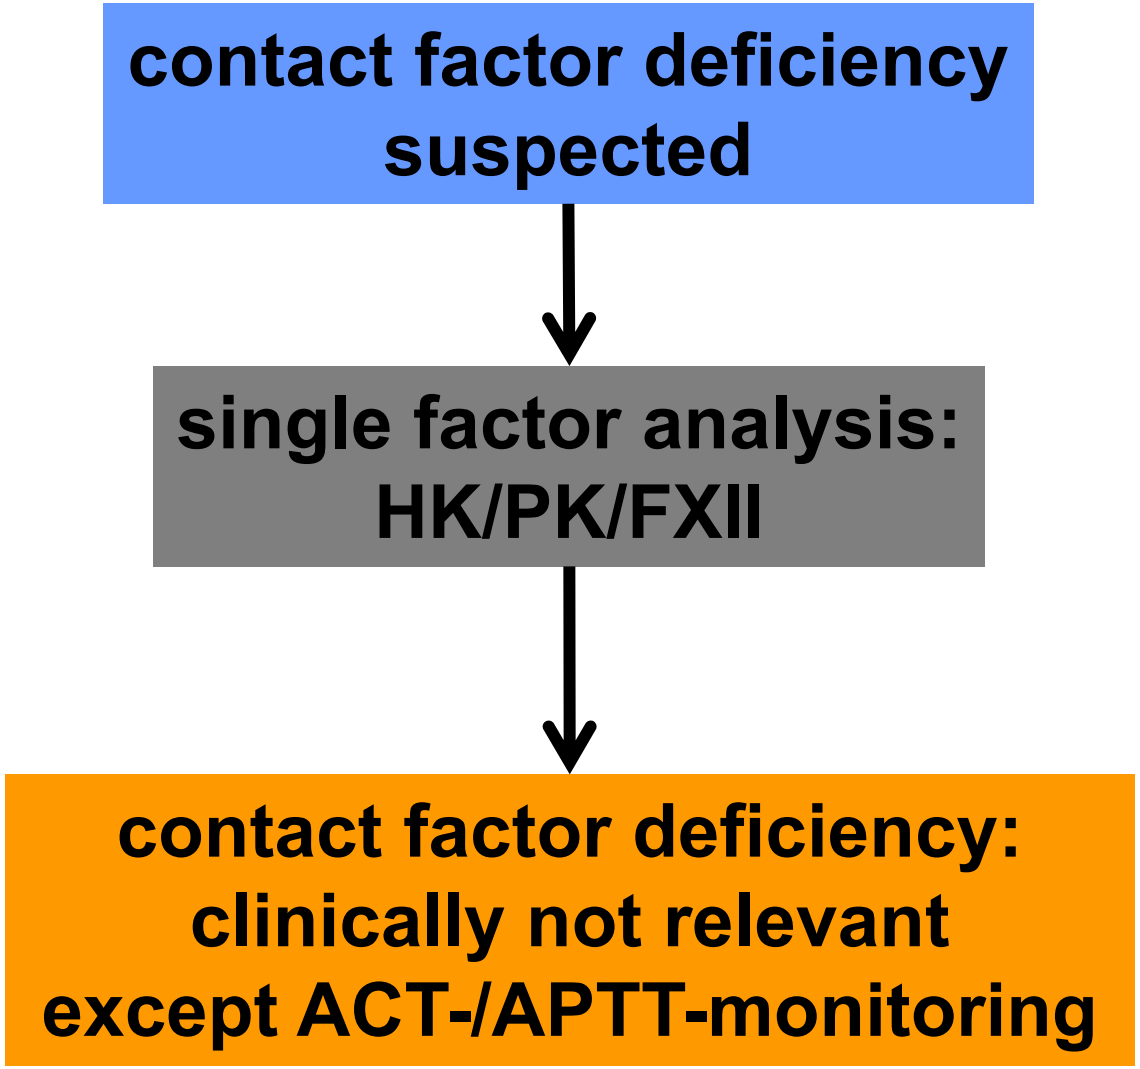
DD: single factor deficiencies

universitäts klinikum bonn



Confirmatory procedures

universitäts klinikum bonn

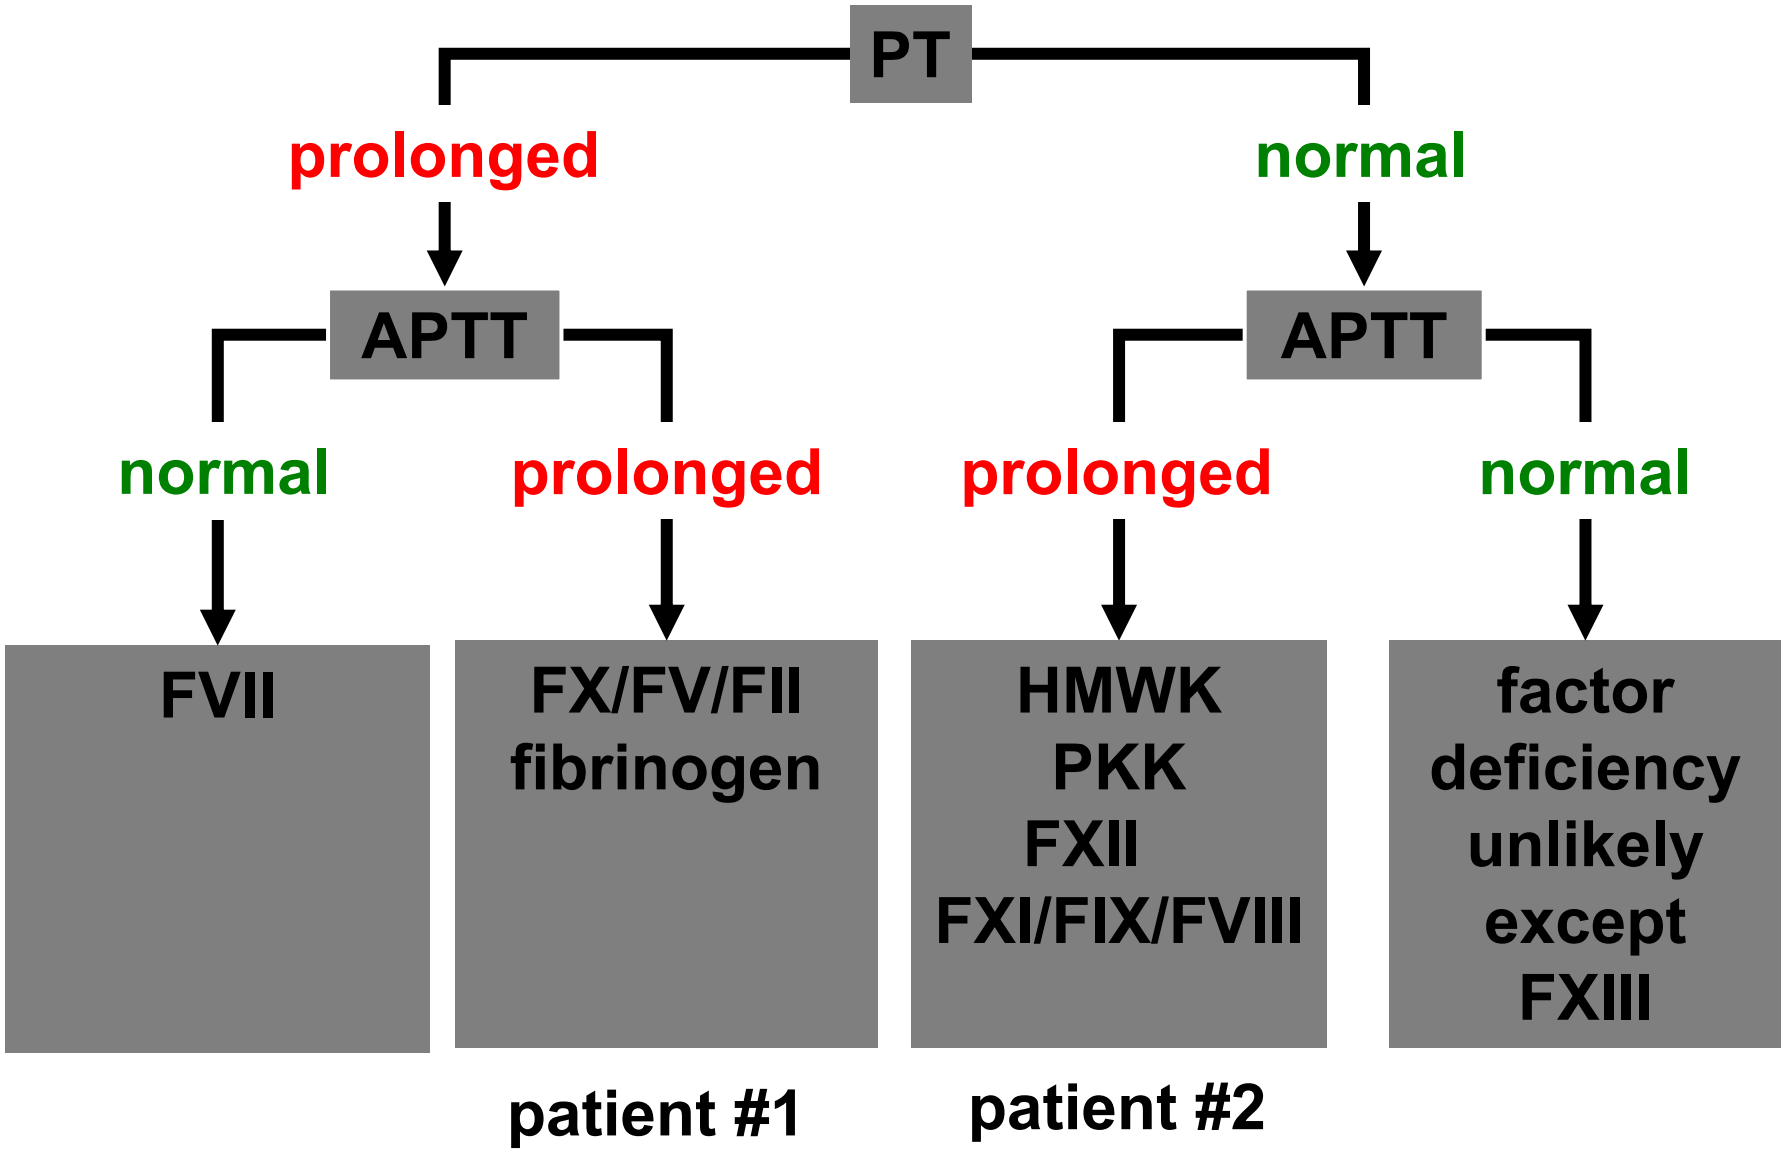


Patients : initial screens

universitäts klinikum bonn

Patient	Platelet count (/µl)	PT (s)	APTT (s)	FXIII (%)
#1	234,000	61	> 150	89
#2	172,000	11	> 150	91

DD: single factor deficiencies



Patients: single factor analysis

universitäts klinikum bonn

Patient	FII (%)	FX (%)	FV (%)	FIX (%)	FVIII (%)	FXI (%)
#1	87	2	89	-	-	-
#2	-	-	-	83	< 1	91

Suspected diagnosis:
Patient #1: FX deficiency
Patient #2: FVIII deficiency (severe hemophilia)

Patient #1: 68-y old male

universitäts klinikum bonn

- severe hematoma after minimal trauma

- he reported no personal or familial history of bleeding

Patient #2: 56-y old male

universitäts klinikum bonn

- severe postoperative bleeding after hernia operation

- haematothorax after central venous support

- massive transfusion
  24 RBC, 32 FFP
  4 platelet conc.

- referred to Bonn via helicopter

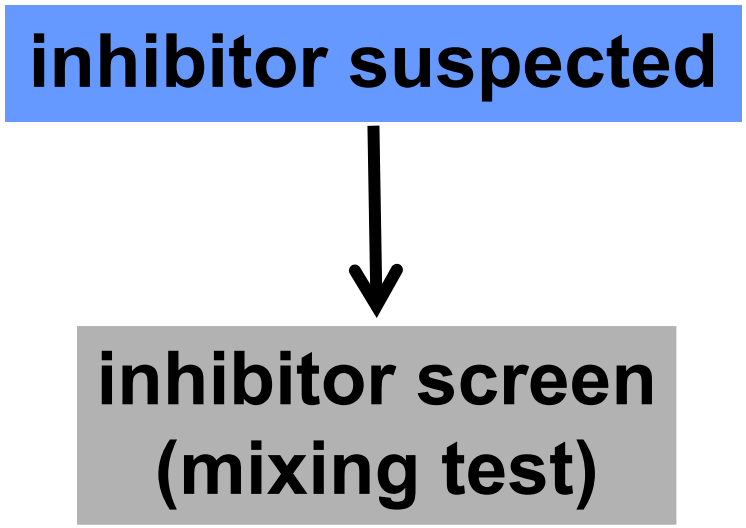
Acquired hemophilia

universitäts klinikum bonn

- large hematomas
- extensive ecchymoses
- severe mucosal bleeding
- gastrointestinal bleeding
- gross hematuria
- w/o a bleeding history

universitäts klinikum bonn

Laboratory approach



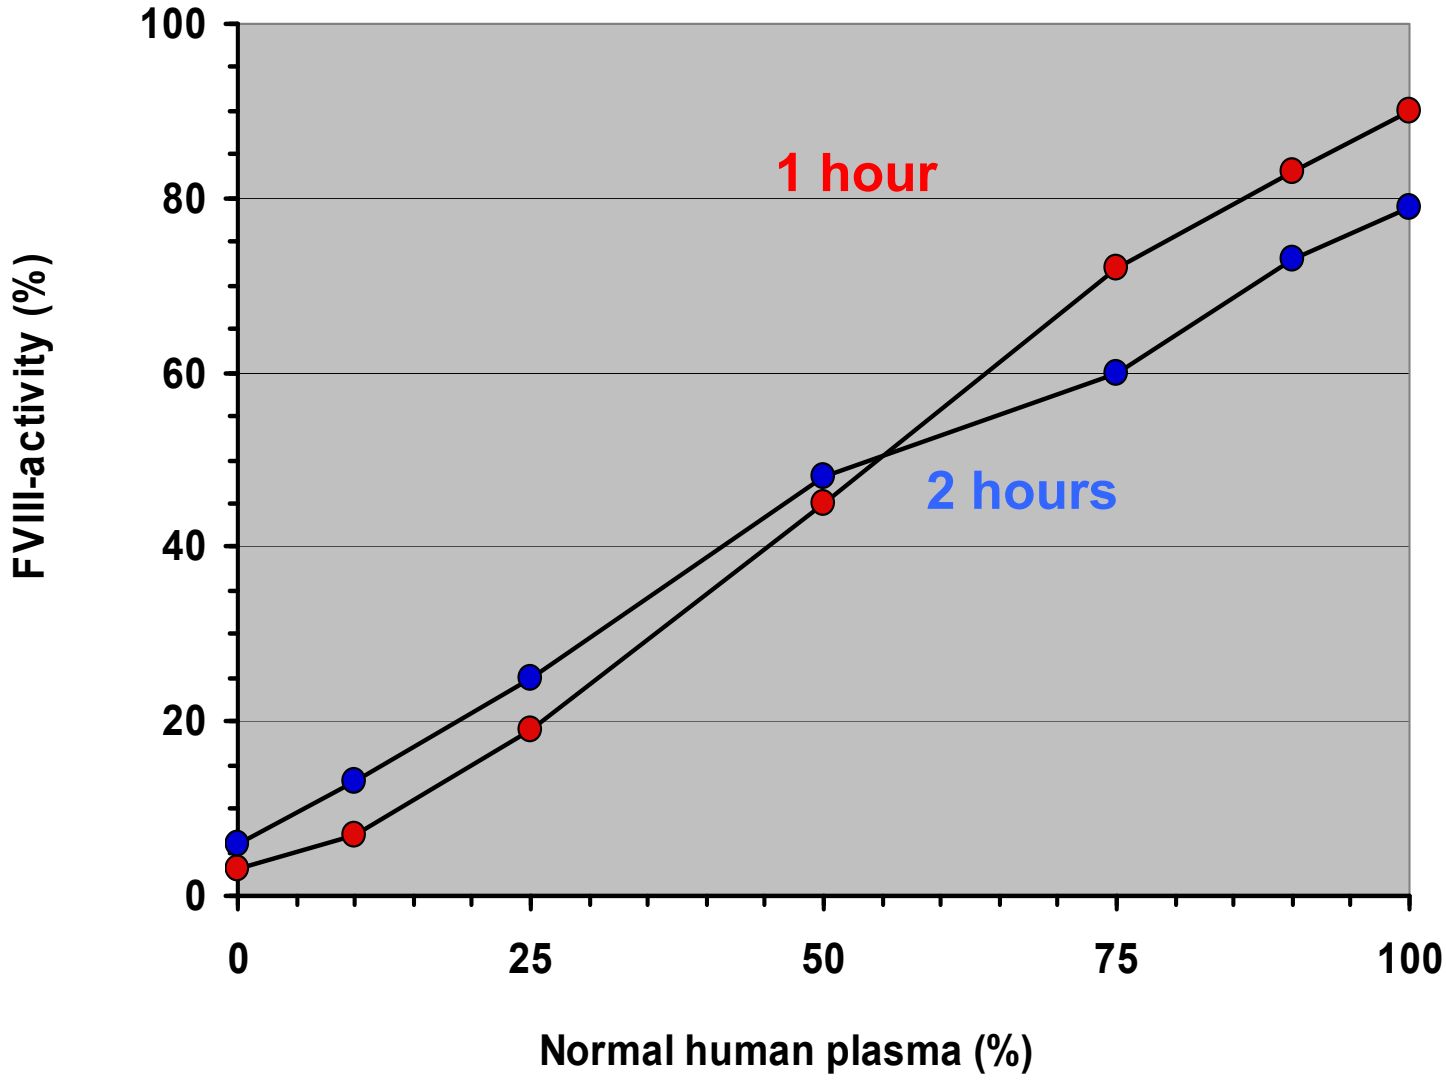
Inhibitor screen

universitäts klinikum bonn

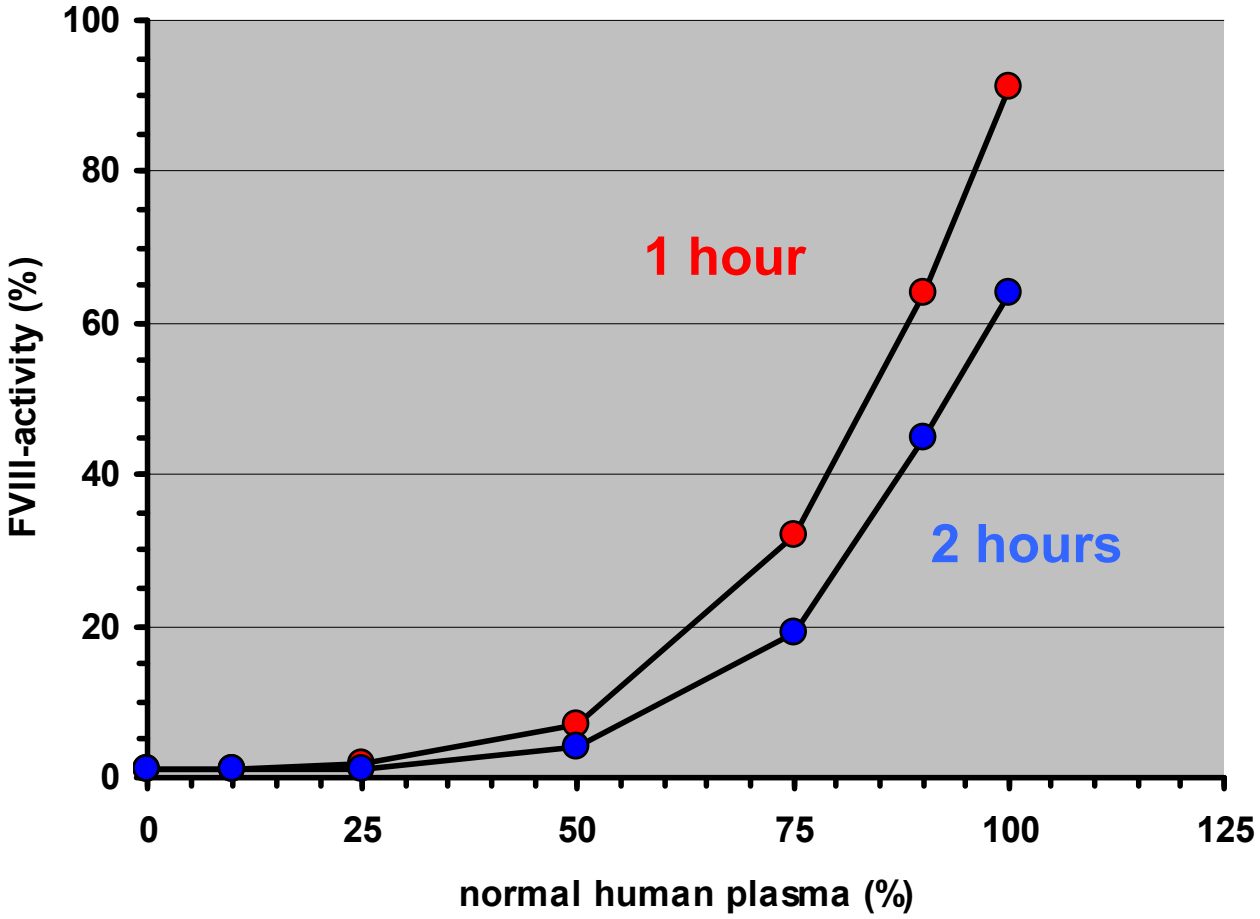
- patient plasma is mixed with increasing concentrations of normal human plasma

- clotting factor activity measured after incubation for 1 and 2 hours at 37° C

Inhibitor screen: negative



Inhibitor screen: positive



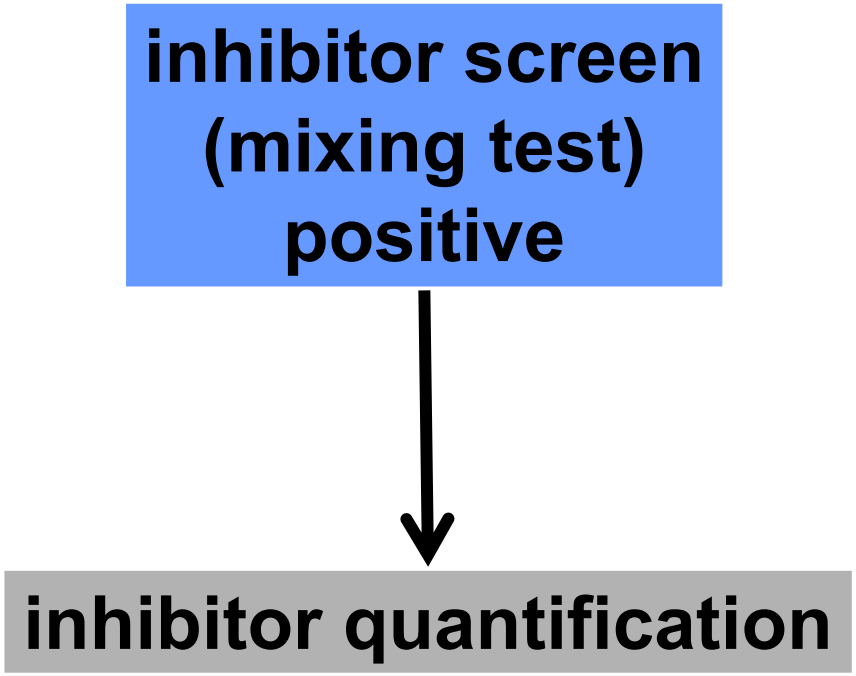
Patients: inhibitor screen

universitäts klinikum bonn

Patient	FX (%)	FV (%)	FVIII (%)	Mixing test
#1	2	89	-	neg
#2	-	-	< 1	pos

universitäts klinikumbonn

Laboratory approach



Bethesda assay

universitäts klinikum bonn

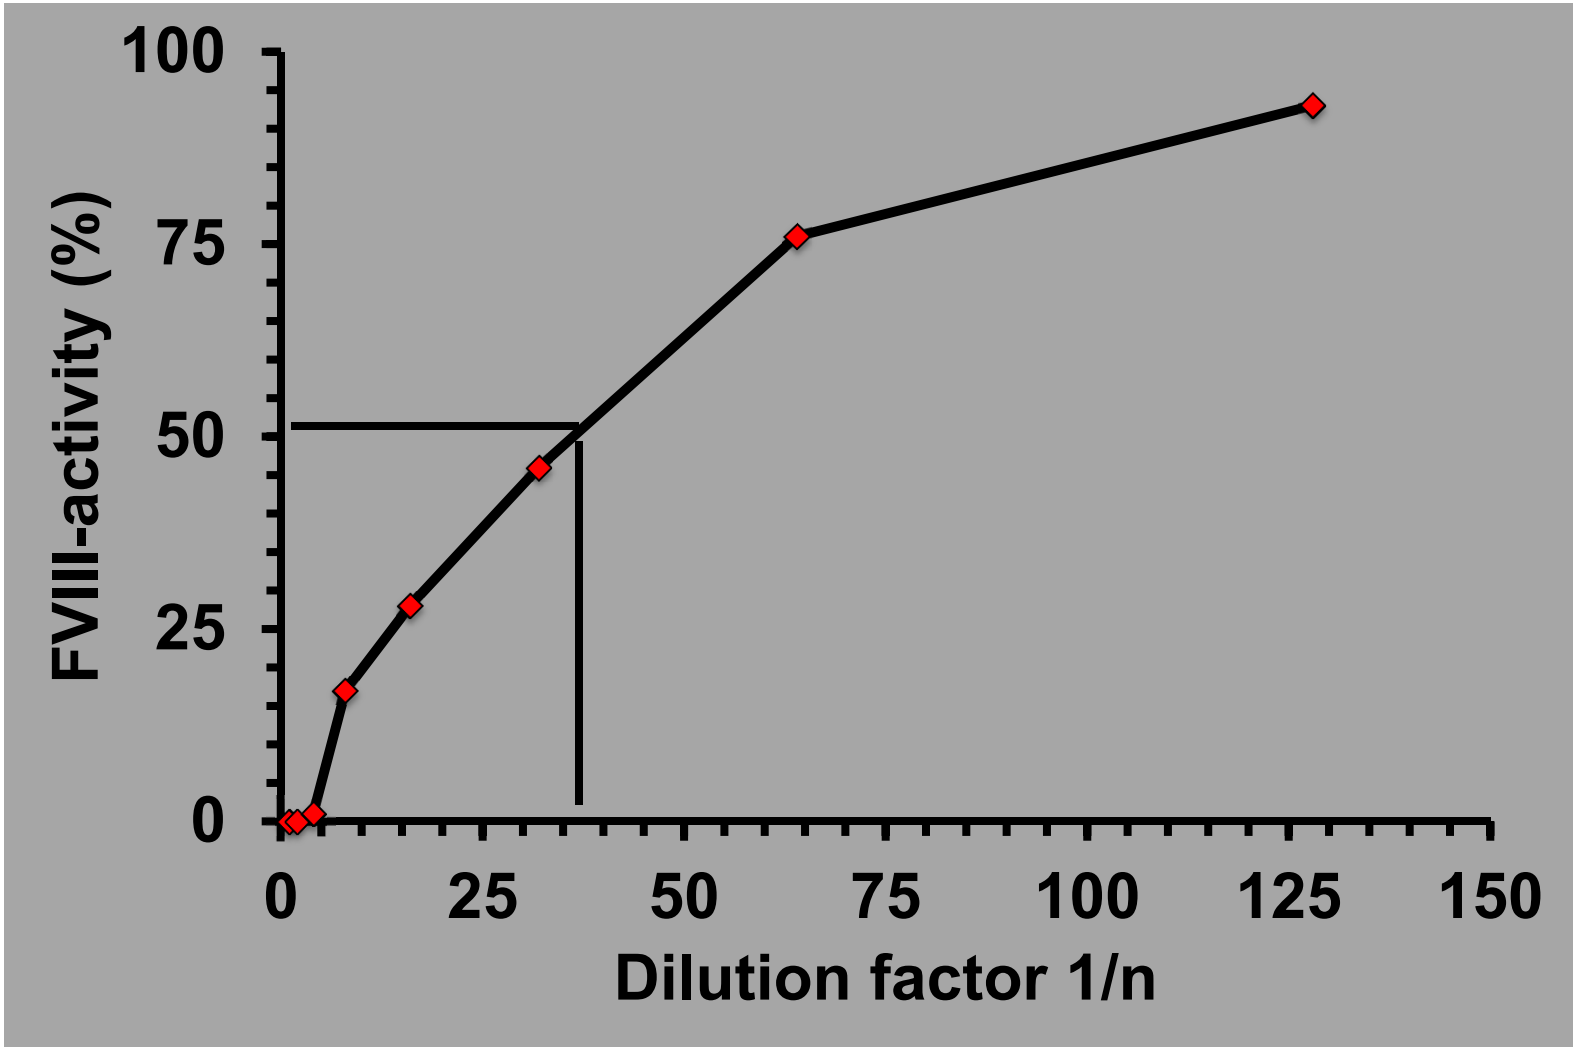
- serial dilutions of patient plasma are incubated for two hours at 37° C with normal human plasma

- factor activity is then measured using a clotting assay

- 1 Bethesda unit (BU) is defined to reduce the activity of a clotting factor in normal human plasma to 50%

Bethesda units (BU)

universitäts klinikumbonn



Patients: Bethesda units (BU)

universitäts klinikum bonn

Patient	FX (%)	FV (%)	FVIII (%)	Mixing test	BU
#1	2	89	-	neg	-
#2	-	-	< 1	pos	37

Patient #2: 56-y old male

universitäts klinikum bonn

- severe postoperative bleeding after hernia operation

- haematothorax after central venous support

➔ acquired hemophilia A caused by high titer FVIII-autoantibodies

Acquired inhibitors: frequencies

universitäts klinikum bonn

Molecular target	Estimated frequency
Factor VIII	1 – 1.5 x 10^6 in non-hemophiliacs
Factor II	few case reports only
Factor V	~ 105 cases described
Factors VII, IX, X, XI	few case reports only
Factor XIII	~ 20 cases described

Patients: inhibitor screen

universitäts klinikum bonn

Patient	FX (%)	FV (%)	FVIII (%)	Mixing test
#1	2	89	-	neg
#2	-	-	< 1	pos

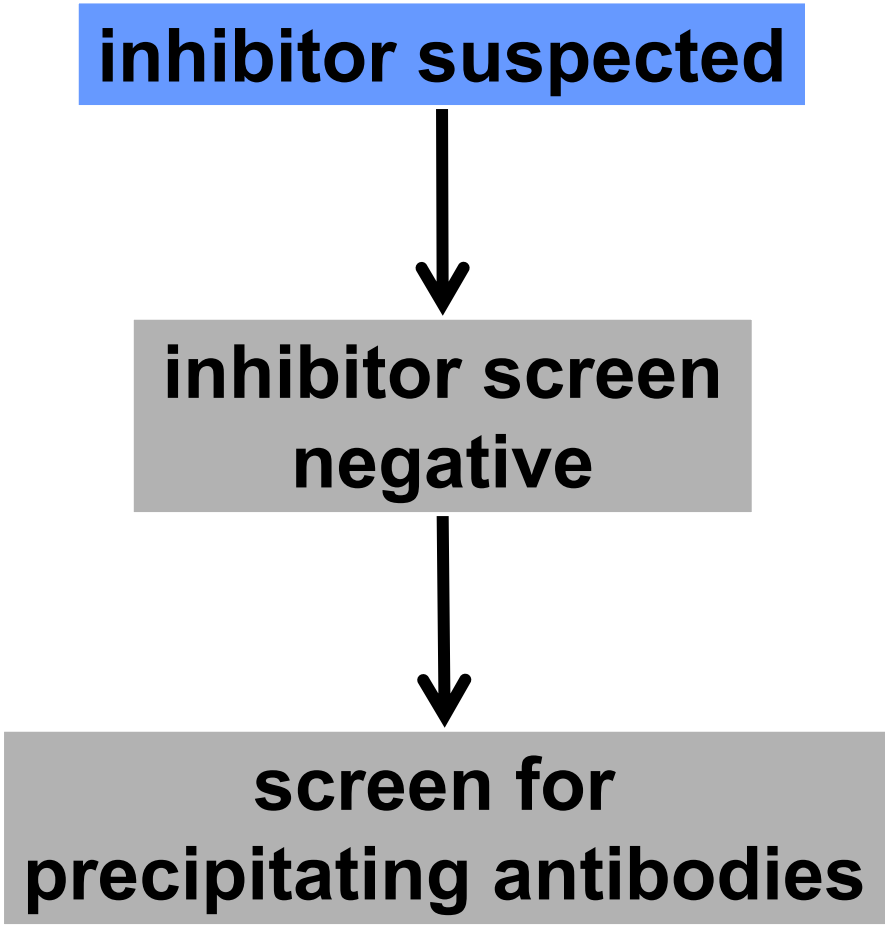
Acquired inhibitors

universitäts klinikum bonn

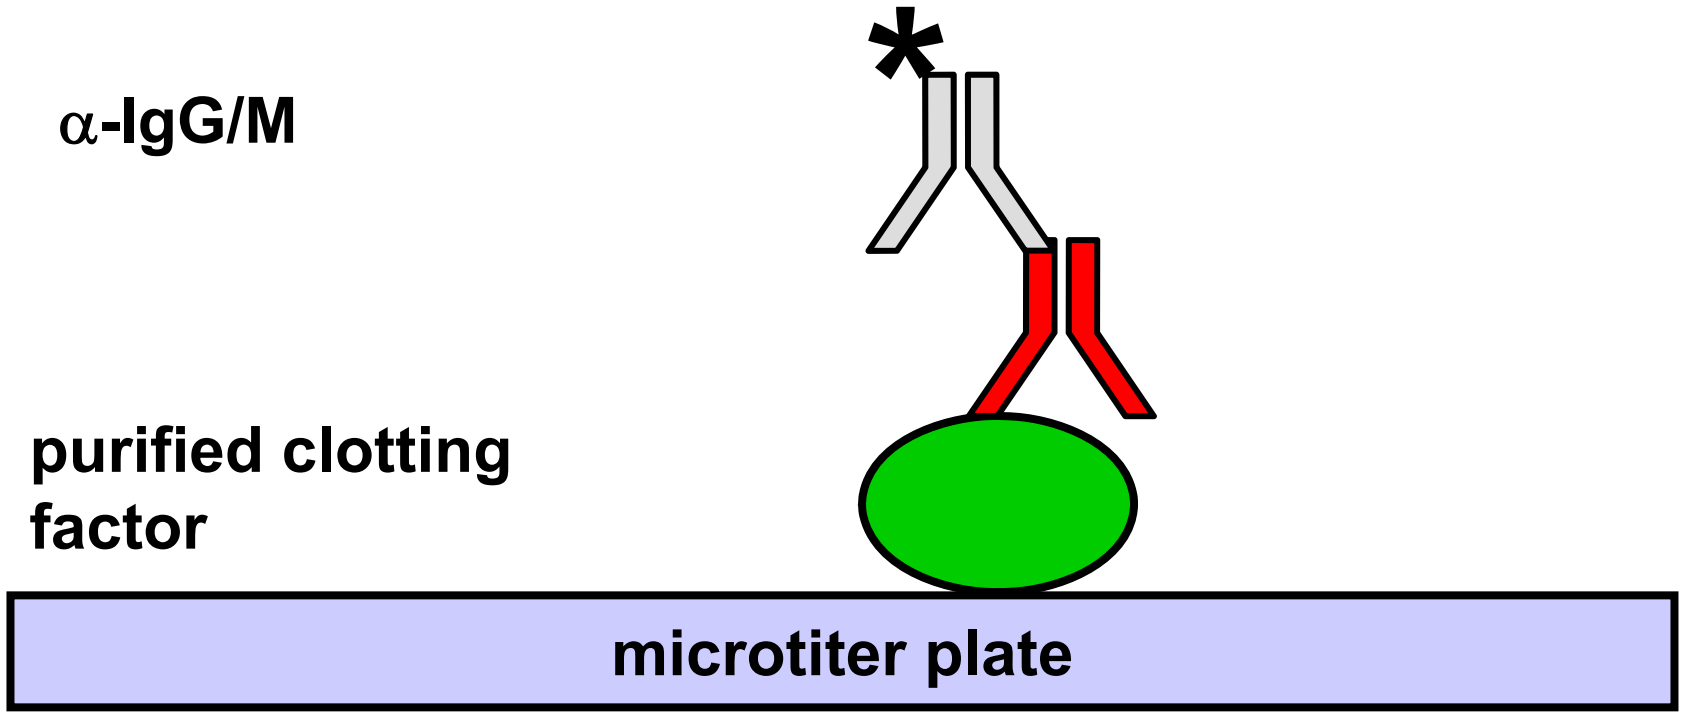
- The majority of acquired inhibitors are antibodies that either inhibit the activity or increase the clearance of a clotting factor.

Laboratory approach

universitäts klinikum bonn



Acquired inhibitor: ELISA



Patients: laboratory data

universitäts klinikum bonn

Patient	FX (%)	FV (%)	Mixing test	BU	APA	ELISA
#1	2	89	neg	-	neg	neg
#2	-	-	pos	37	neg	-

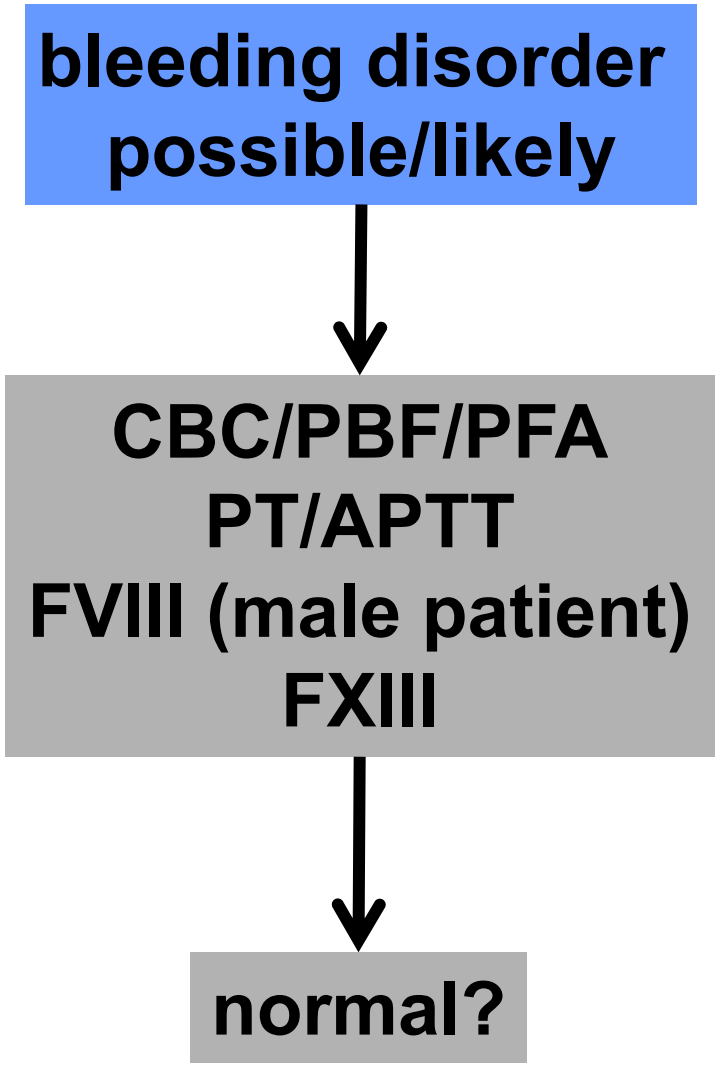
Patient #1: 68-y old male

universitäts klinikum bonn

- severe hematoma after minimal trauma
- skin biopsy reveals amyloidosis
- ➔ amyloid-associated FX-deficiency

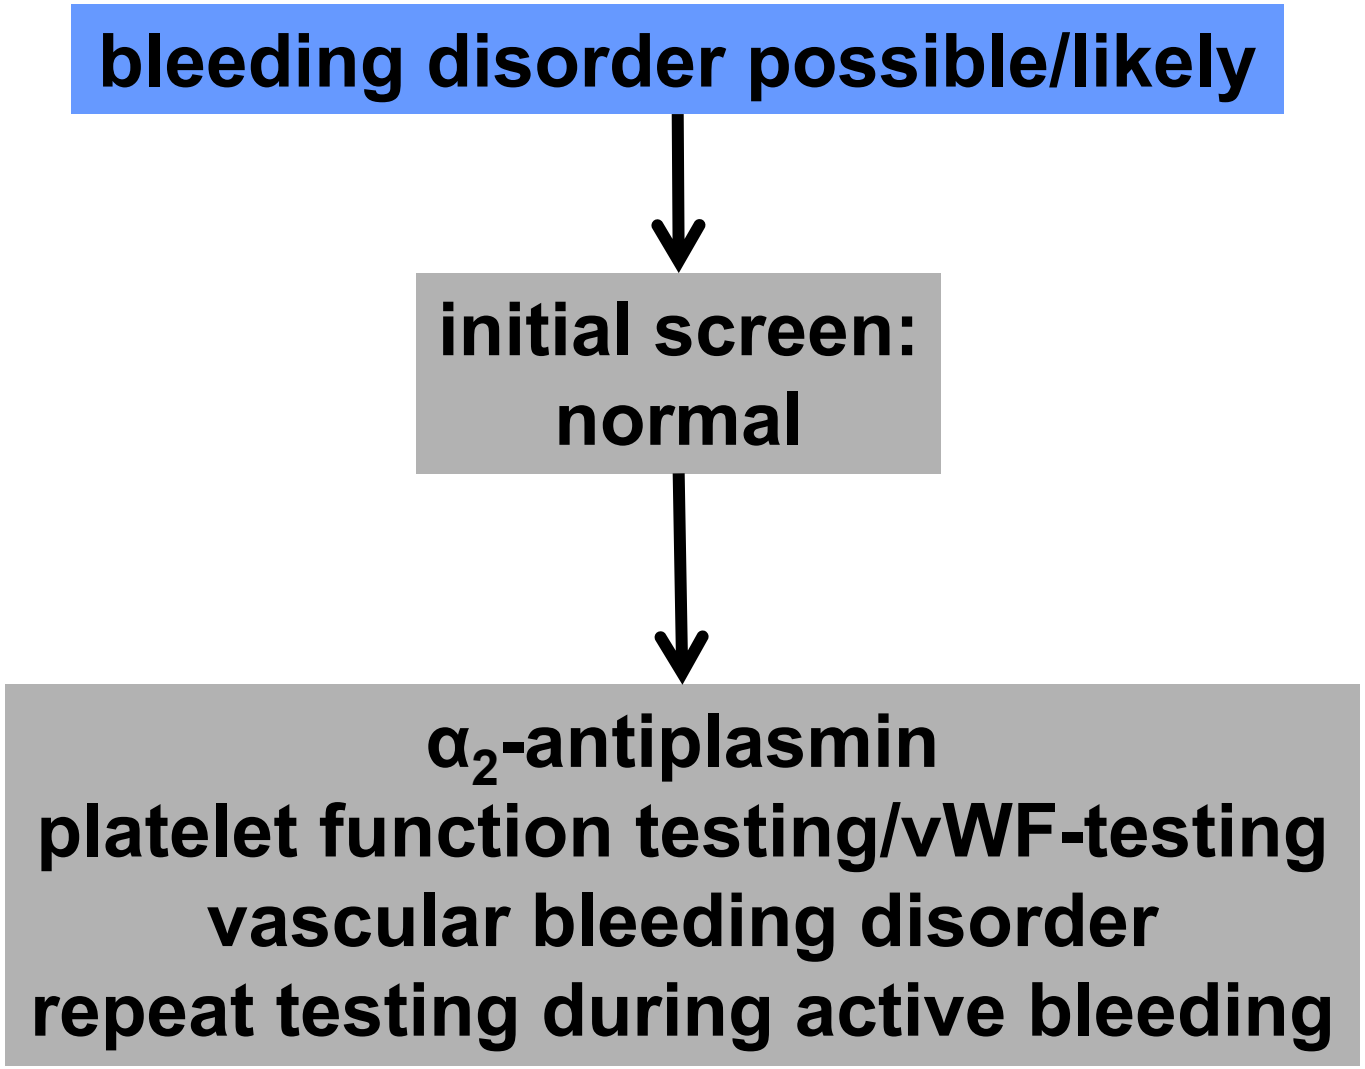
Screening parameters

universitäts klinikumbonn



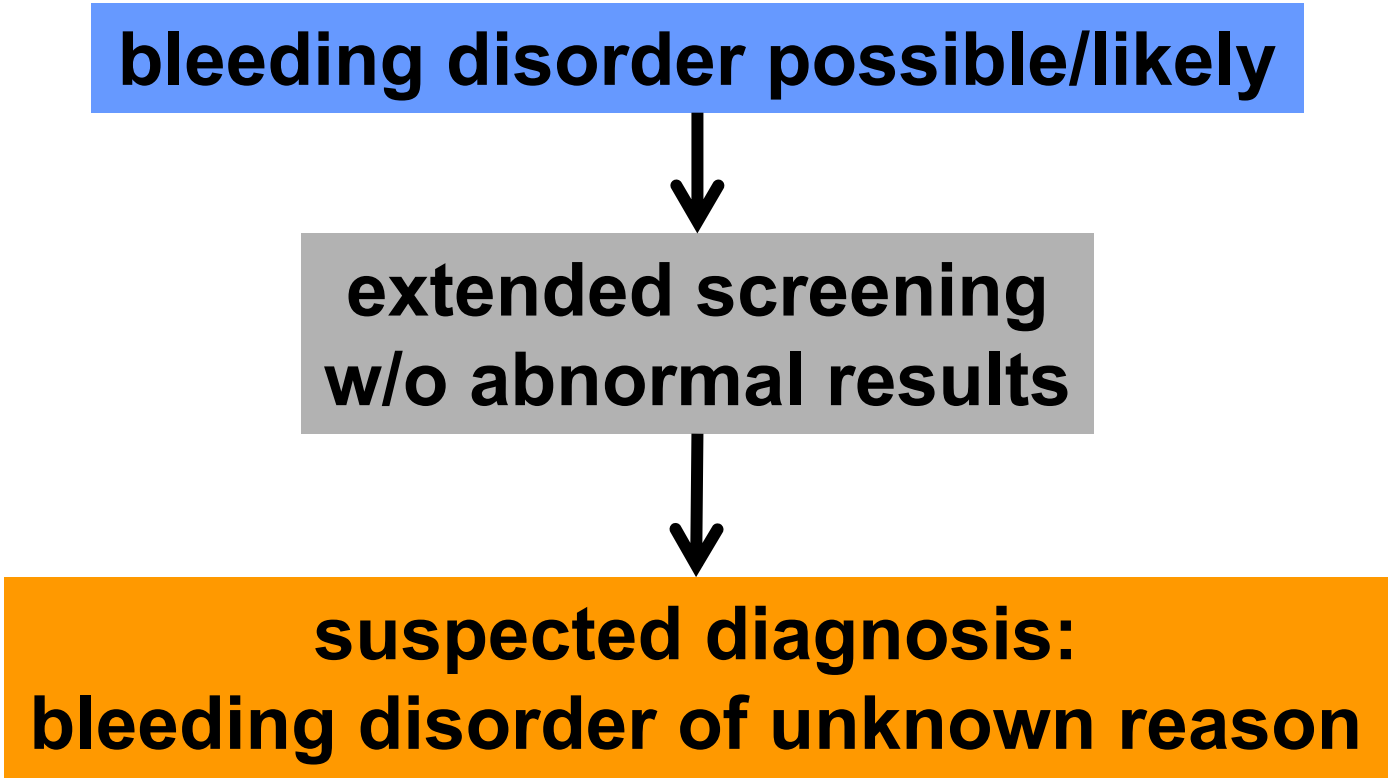
Extended screening

universitäts klinikumbonn



Clinical decision finding

universitäts klinikum bonn



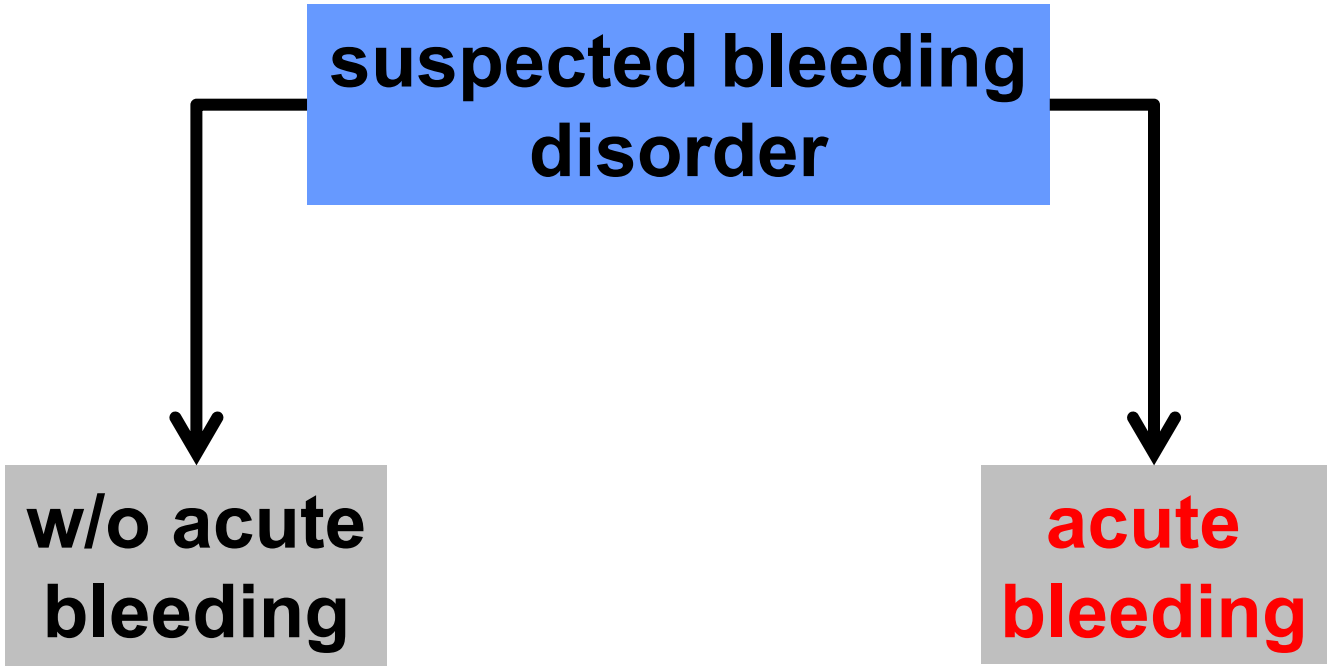
Take home message (II)

- If relatively simple screening procedures are used, the vast majority of hemorrhagic problems can be identified.

- Confirmatory tests are subsequently used to establish an appropriate differential diagnosis.

Clinical situations

universitäts klinikum bonn



universitäts klinikum bonn

Acute Bleeding: Grading

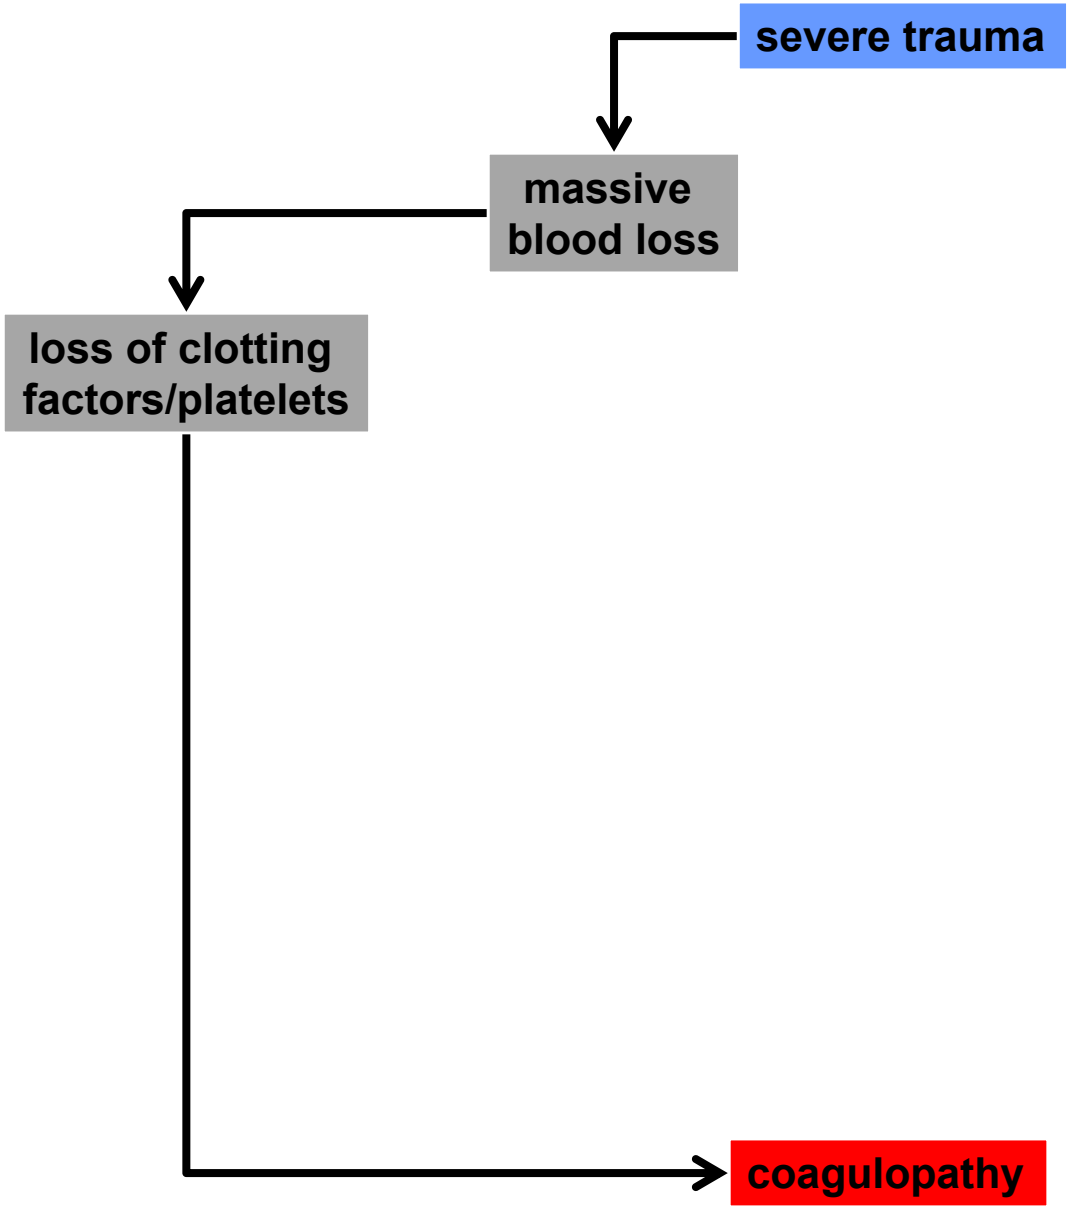
- **Life-threatening (WHO grade 4)**
  Trauma or critical organ bleeding

- **Severe (WHO grade 3)**
  gross blood loss, requires transfusion

- **Mild blood loss but clinically significant (WHO grade 2)**

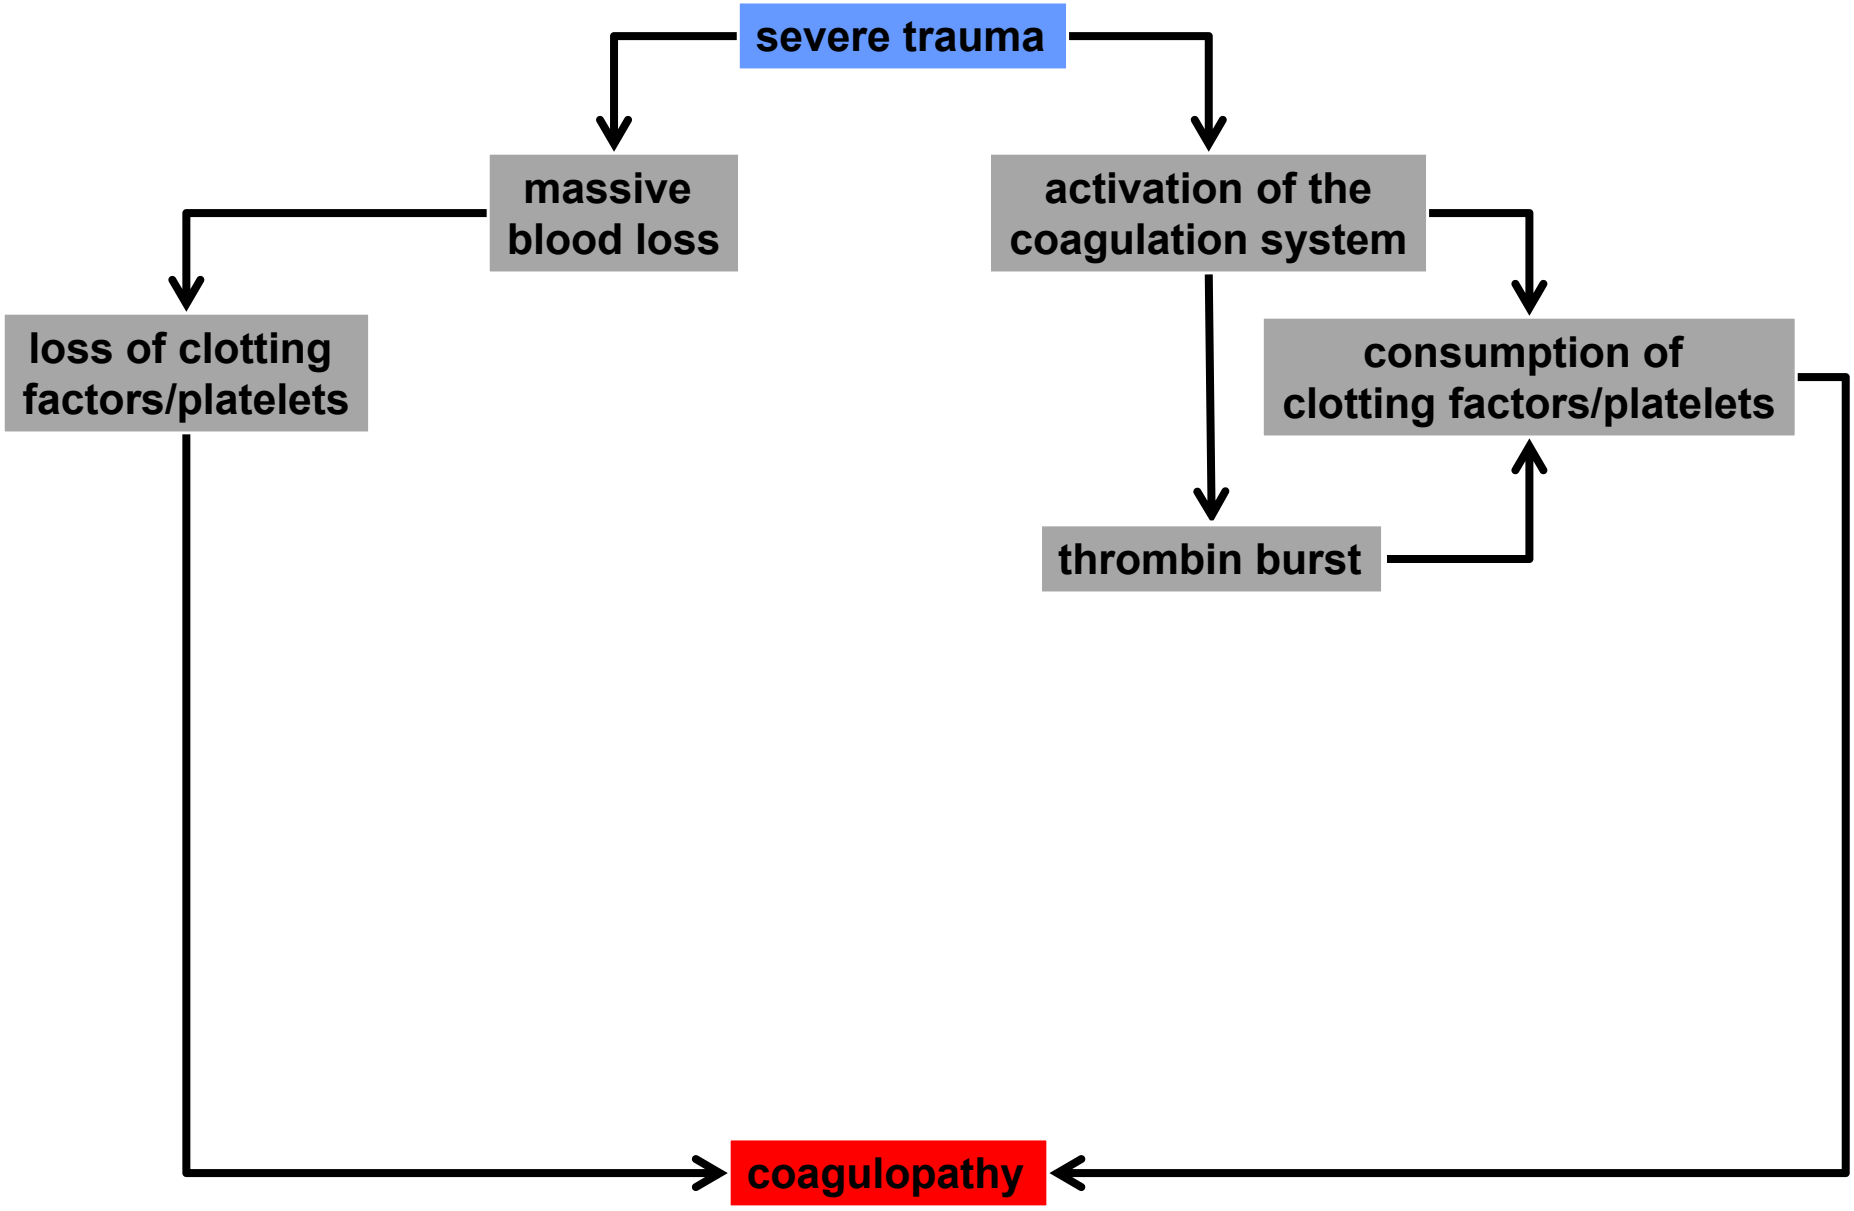
TIC-cascade (I)

universitäts klinikum bonn



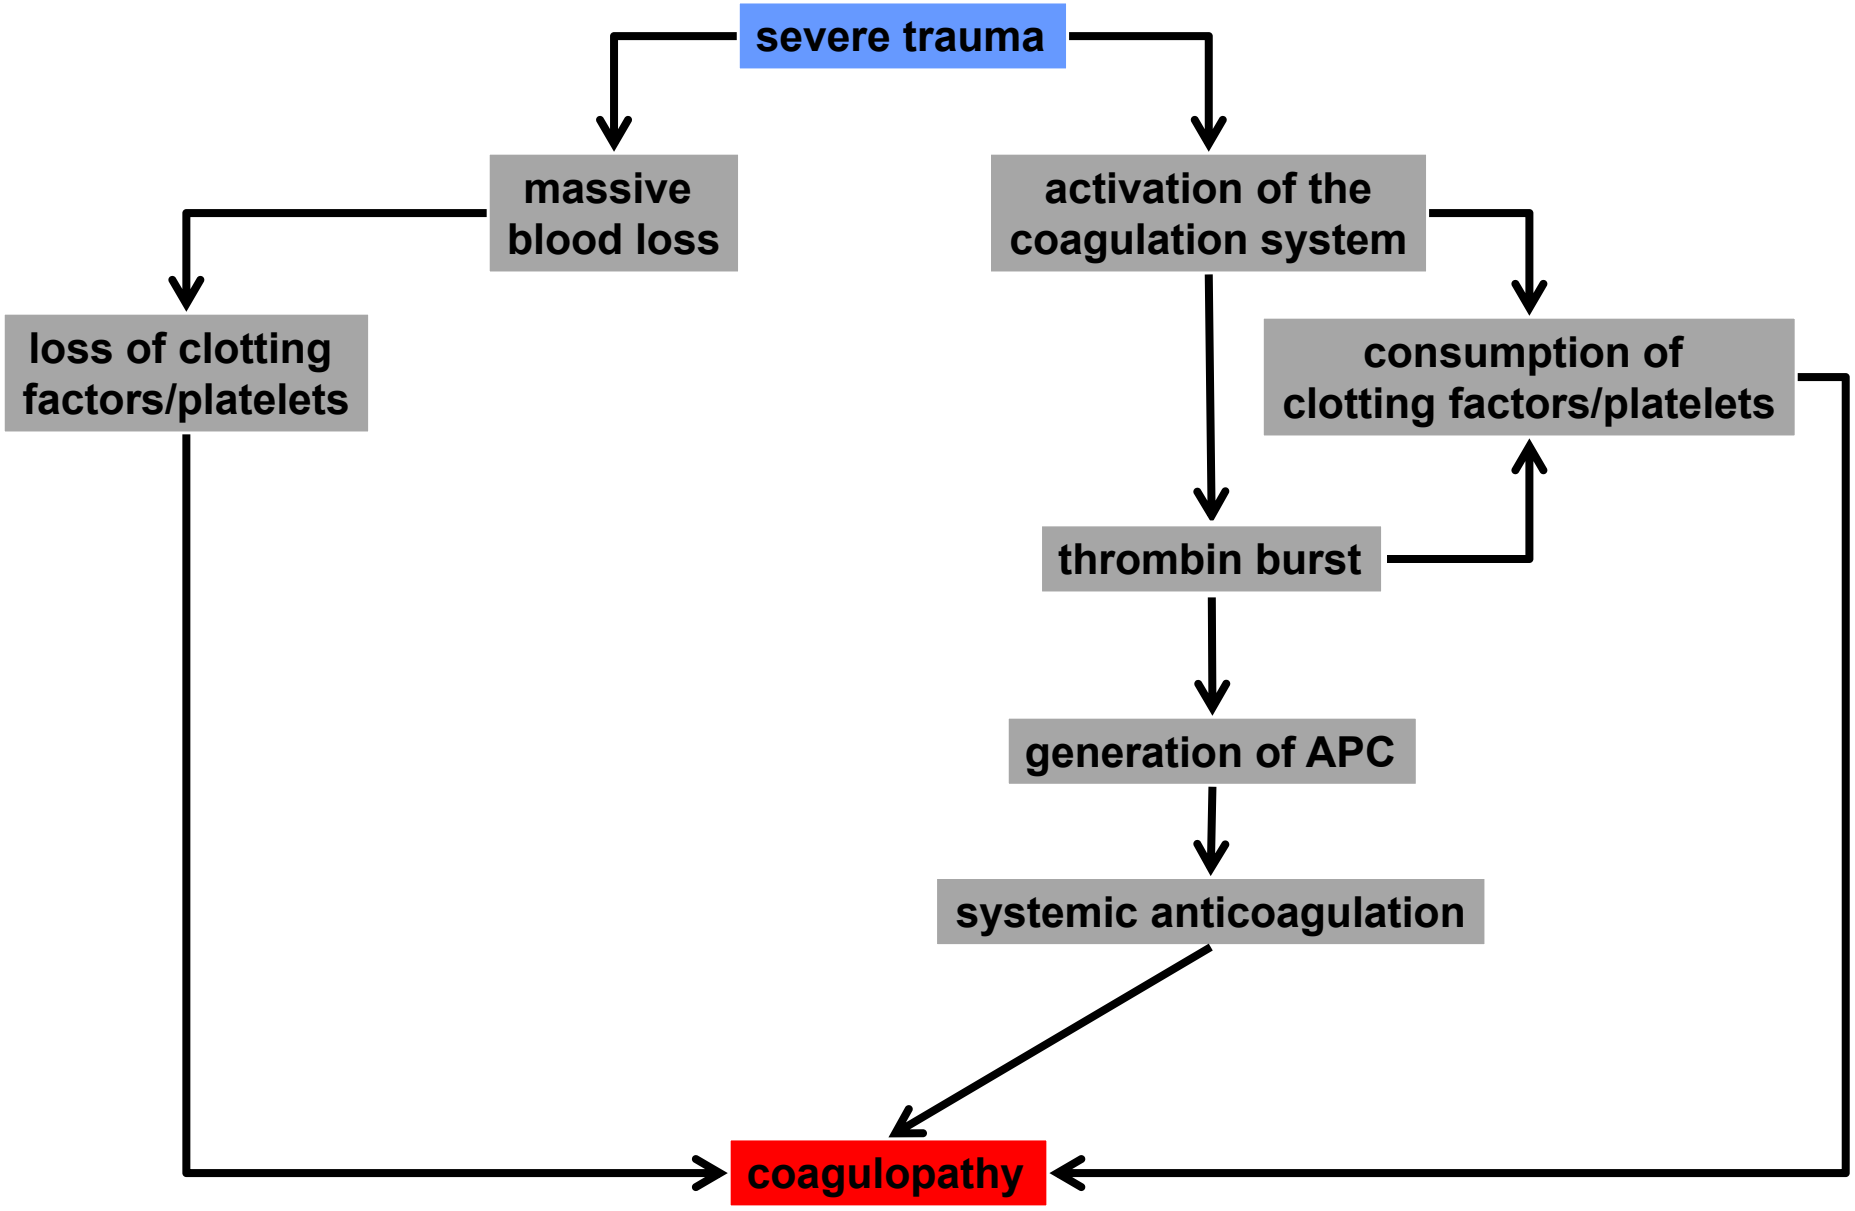
TIC-cascade (II)

universitätsklinikumbonn

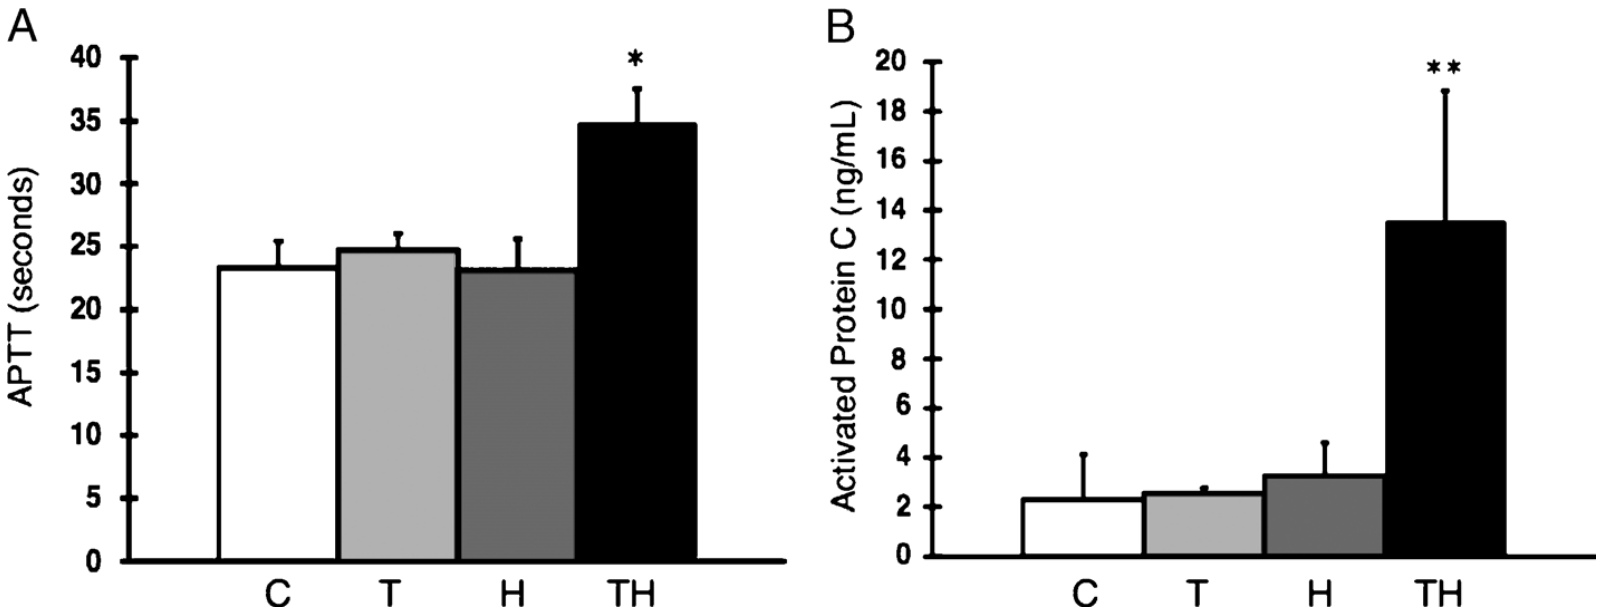


TIC-cascade (III)

universitäts klinikum bonn



TIC: APC-formation

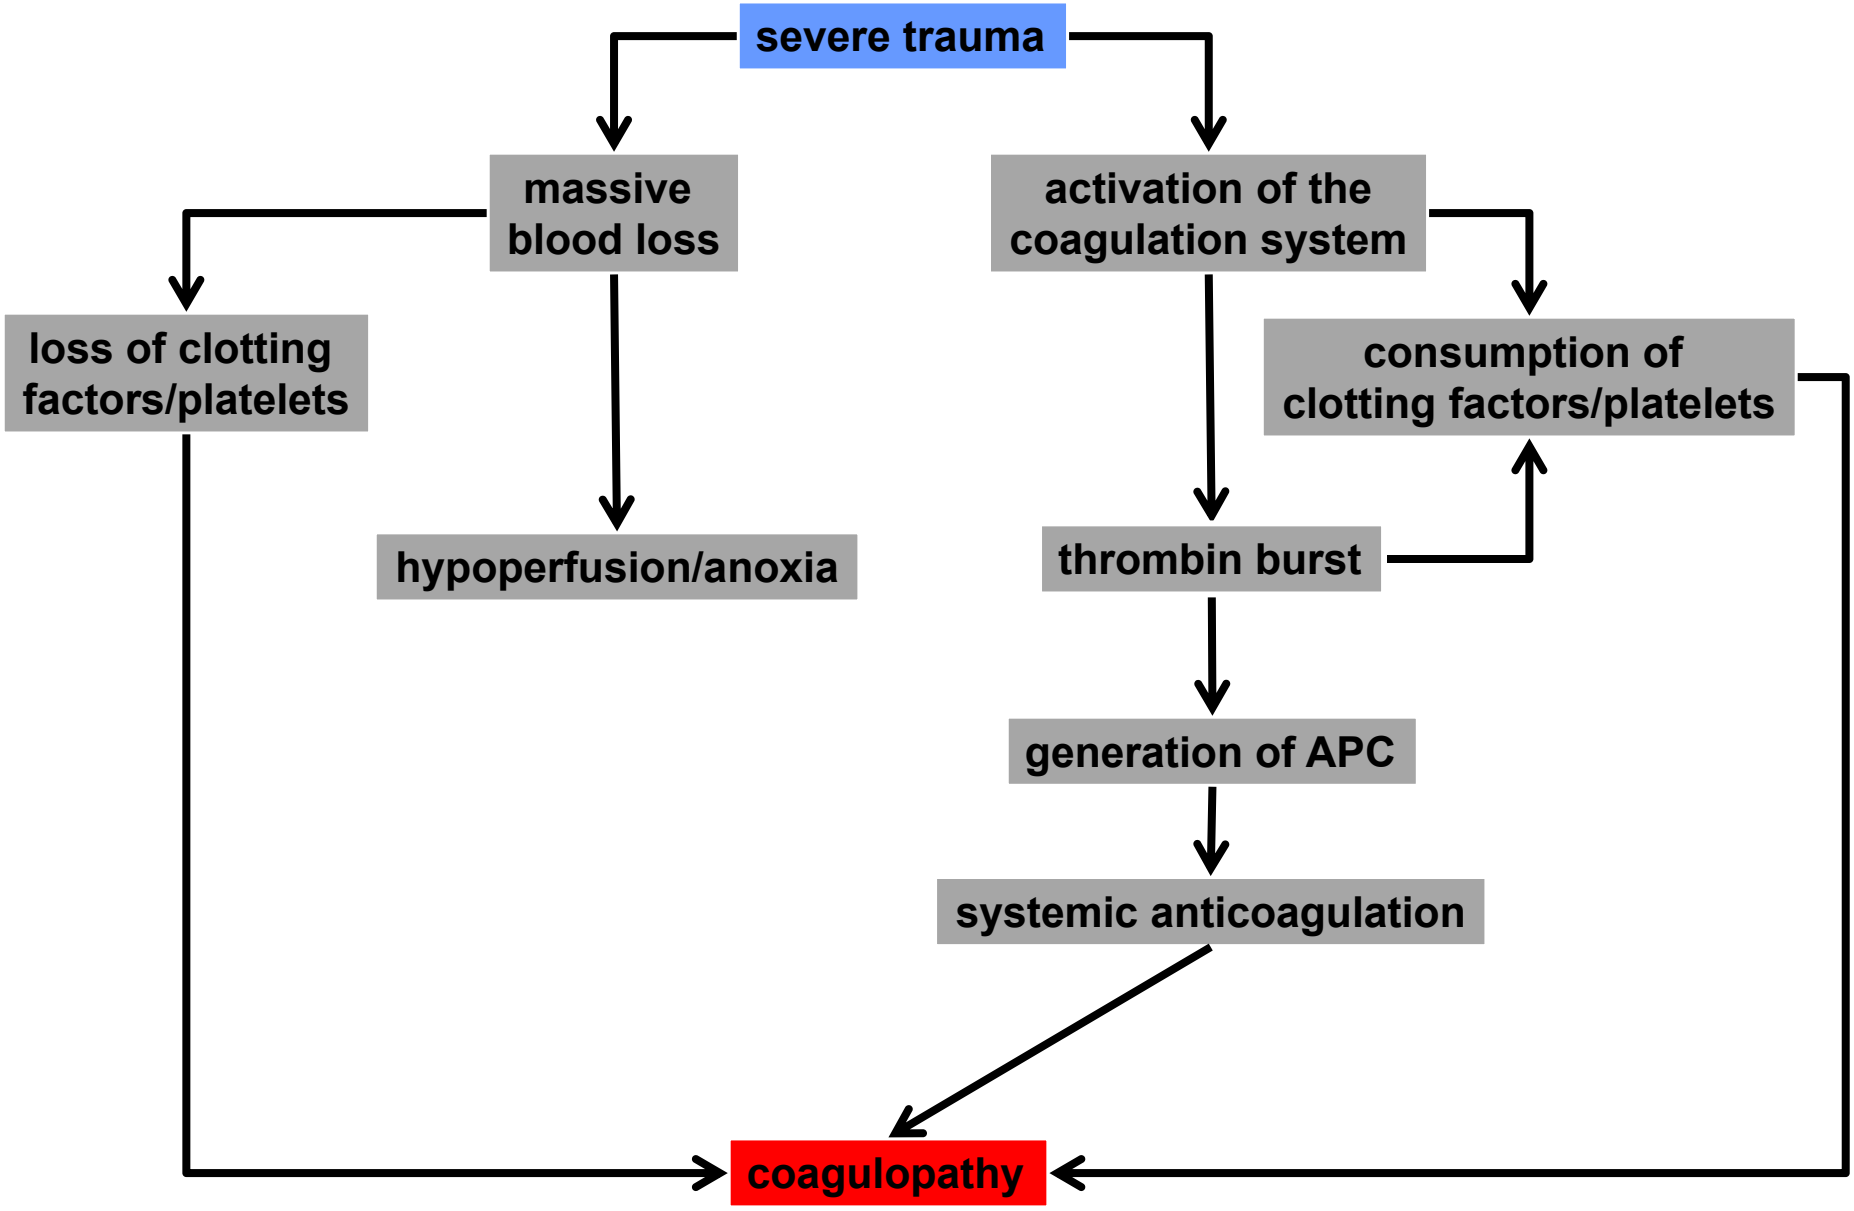


C = control, T = trauma, H = hemorrhage, TH = trauma + hemorrhage

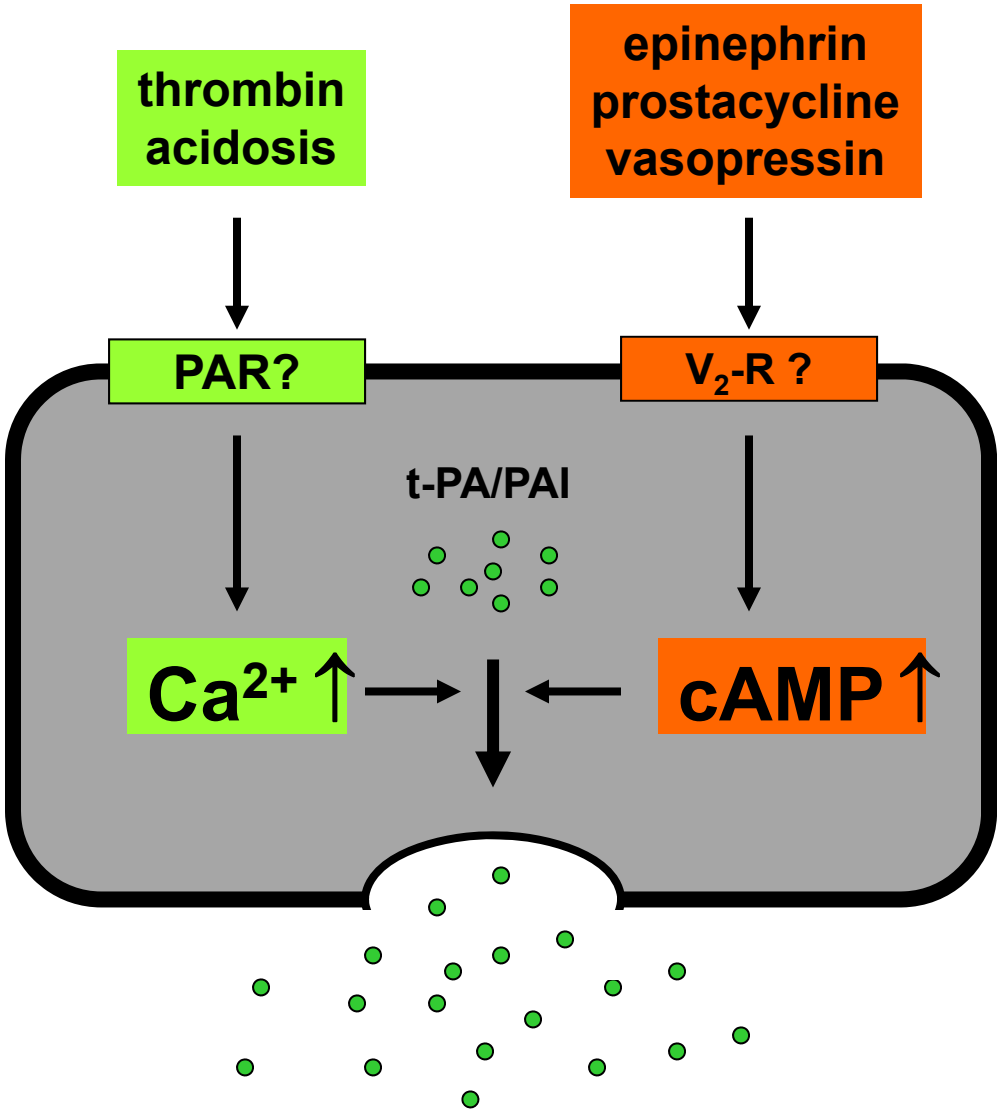
Chesebro BB, et al. Shock 2009; 32: 659-665

TIC-cascade (IV)

universitätsklinikumbonn



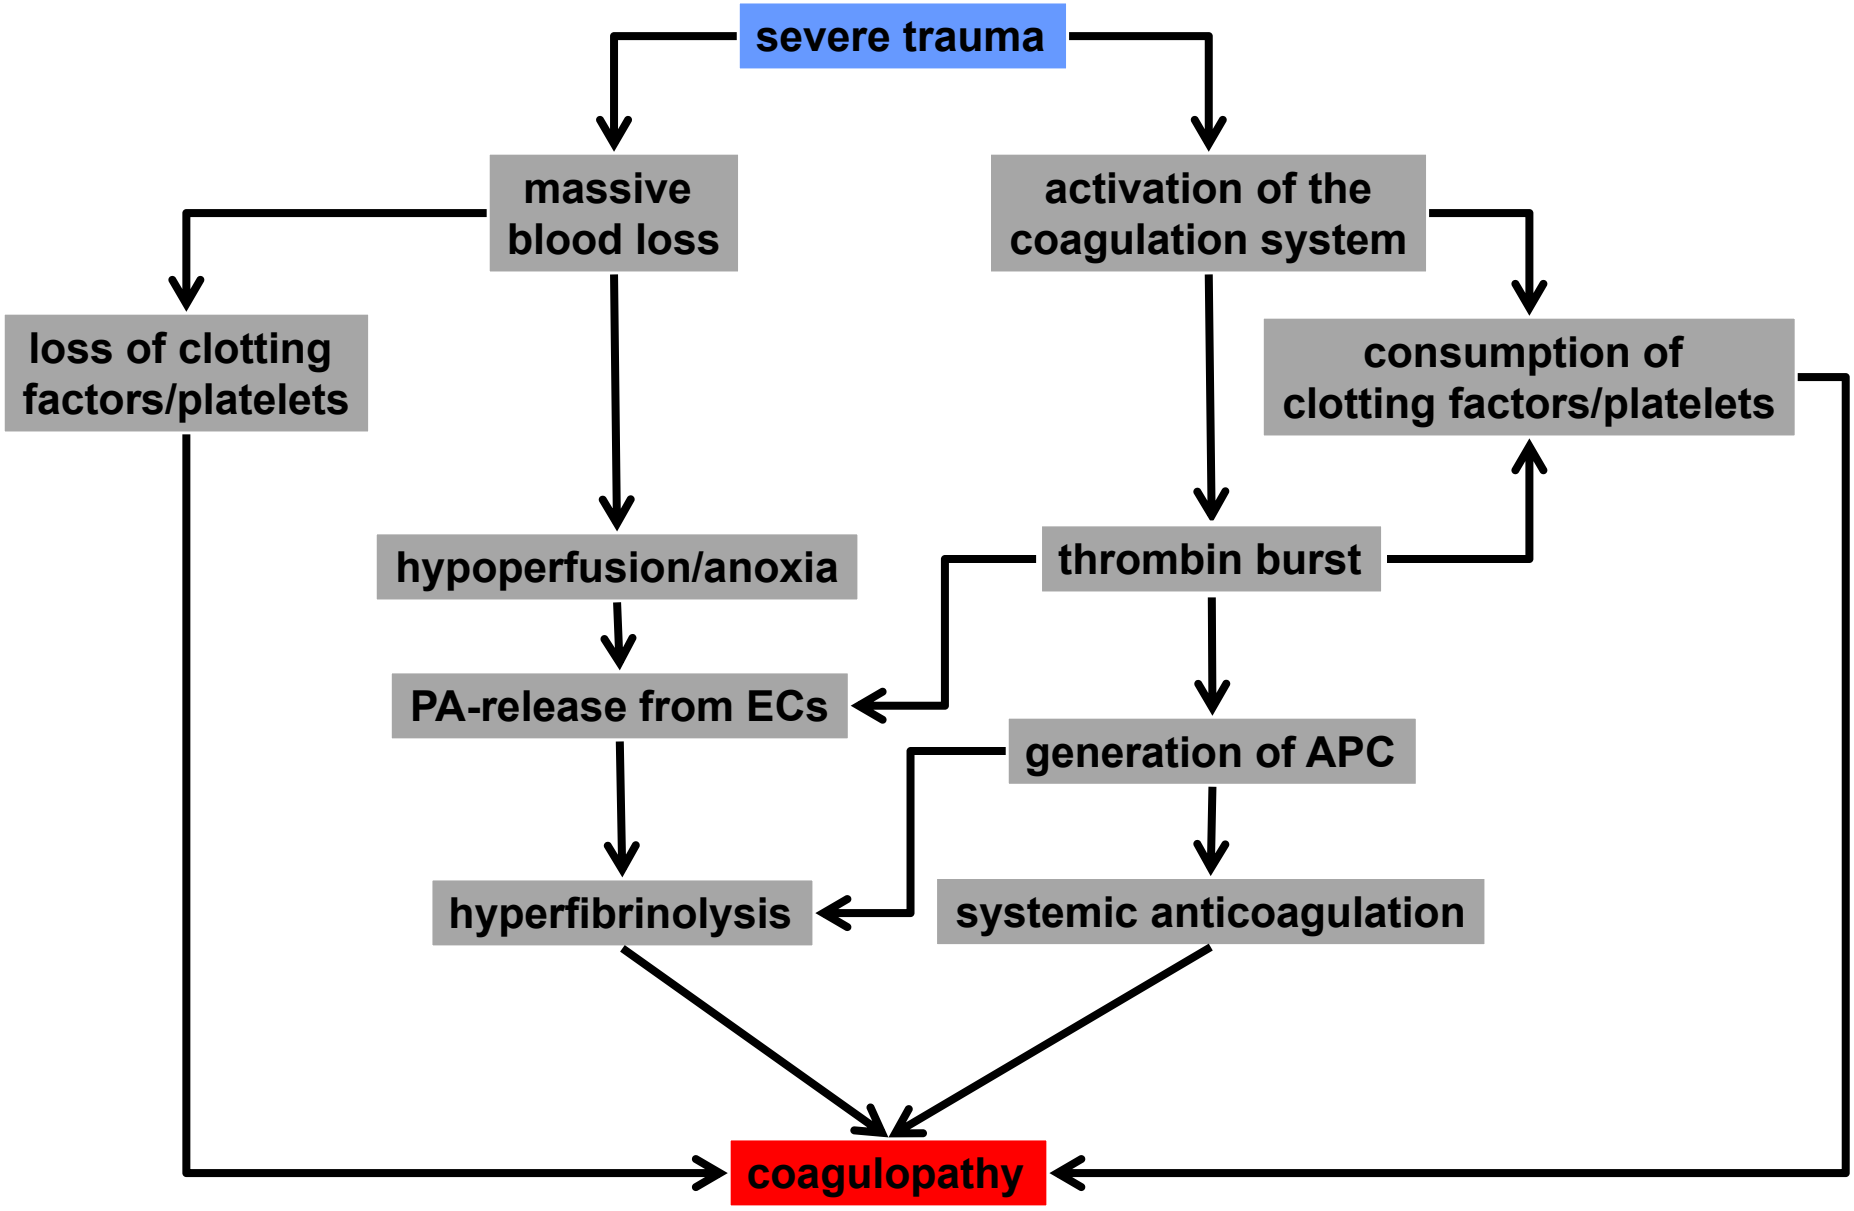
t-PA-secretion



t-PA: tissue-type plasminogen activator

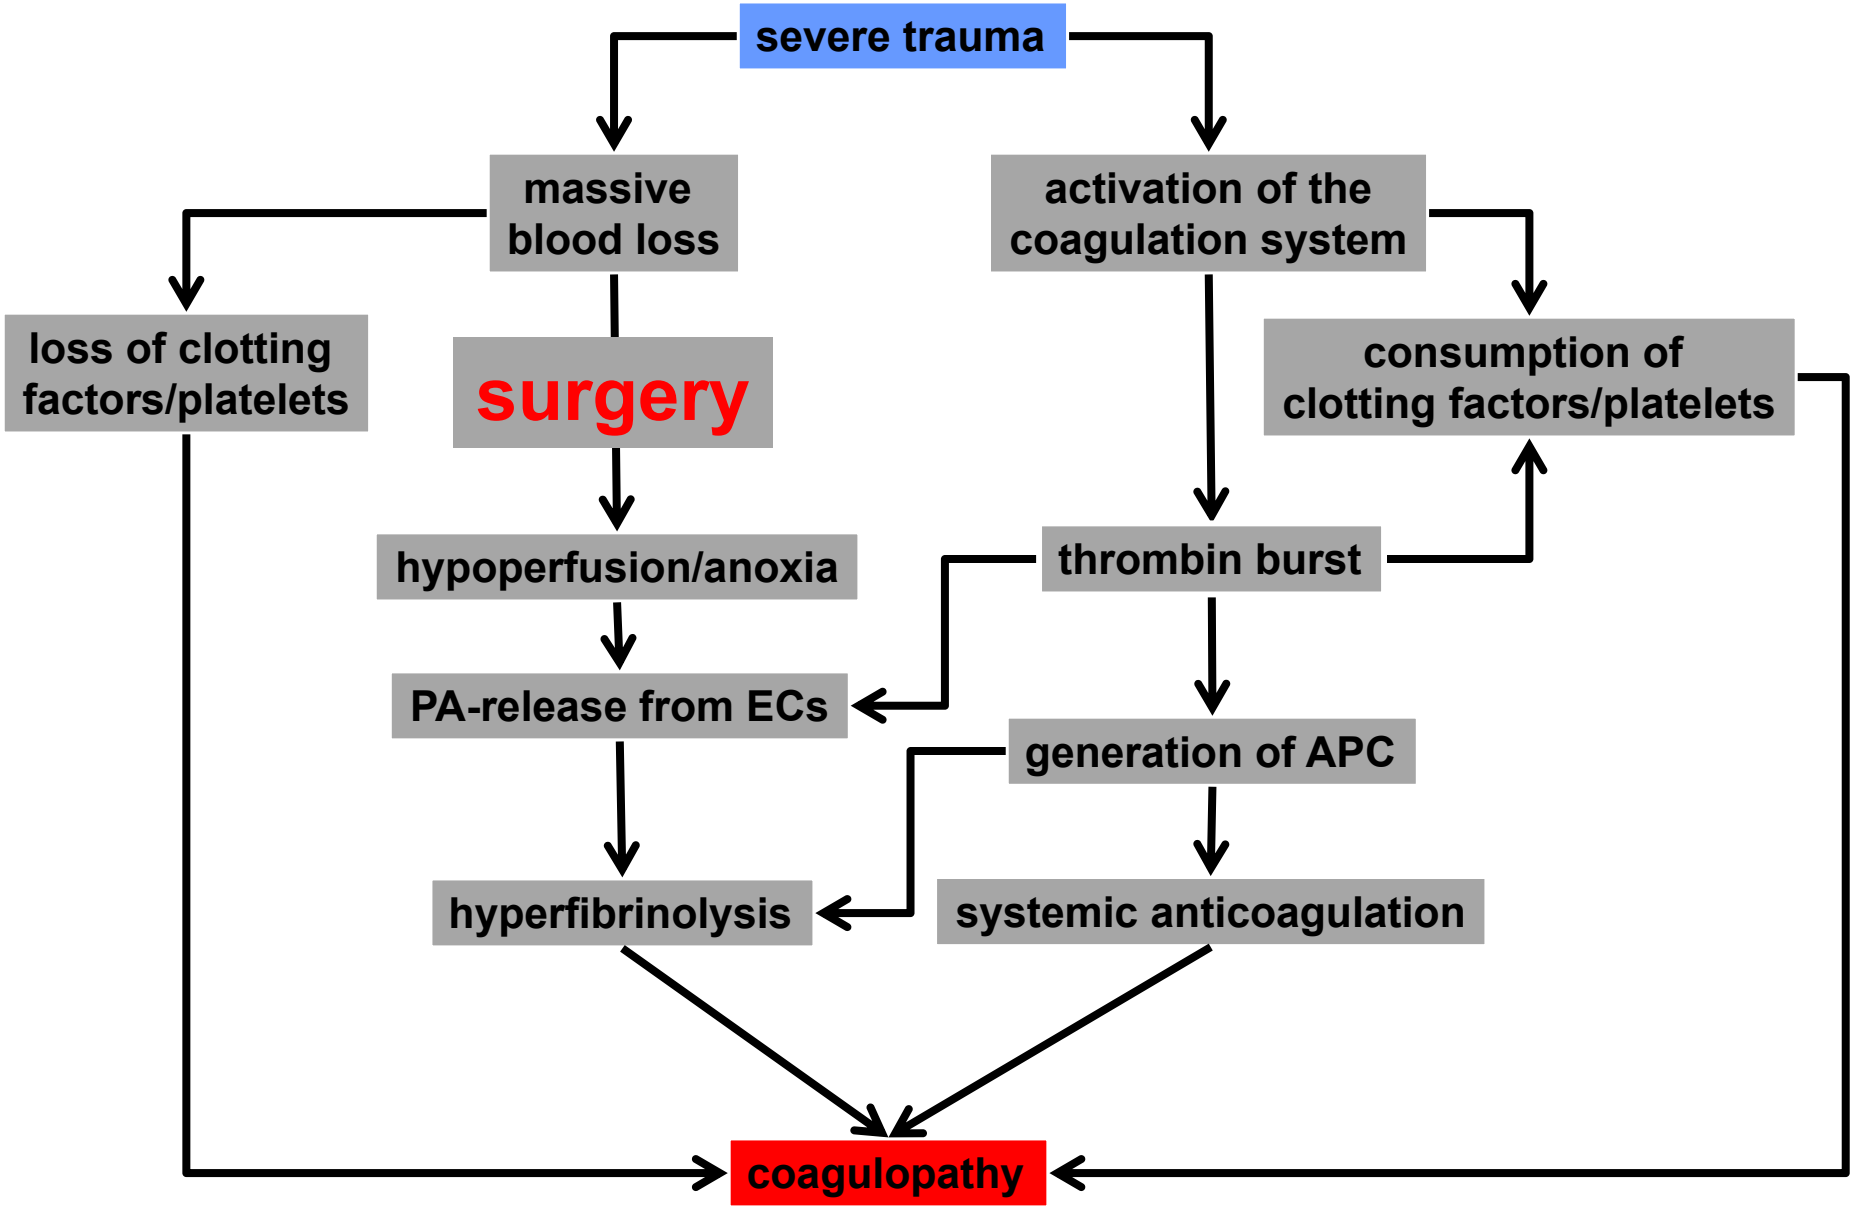
TIC-cascade (V)

universitätsklinikumbonn



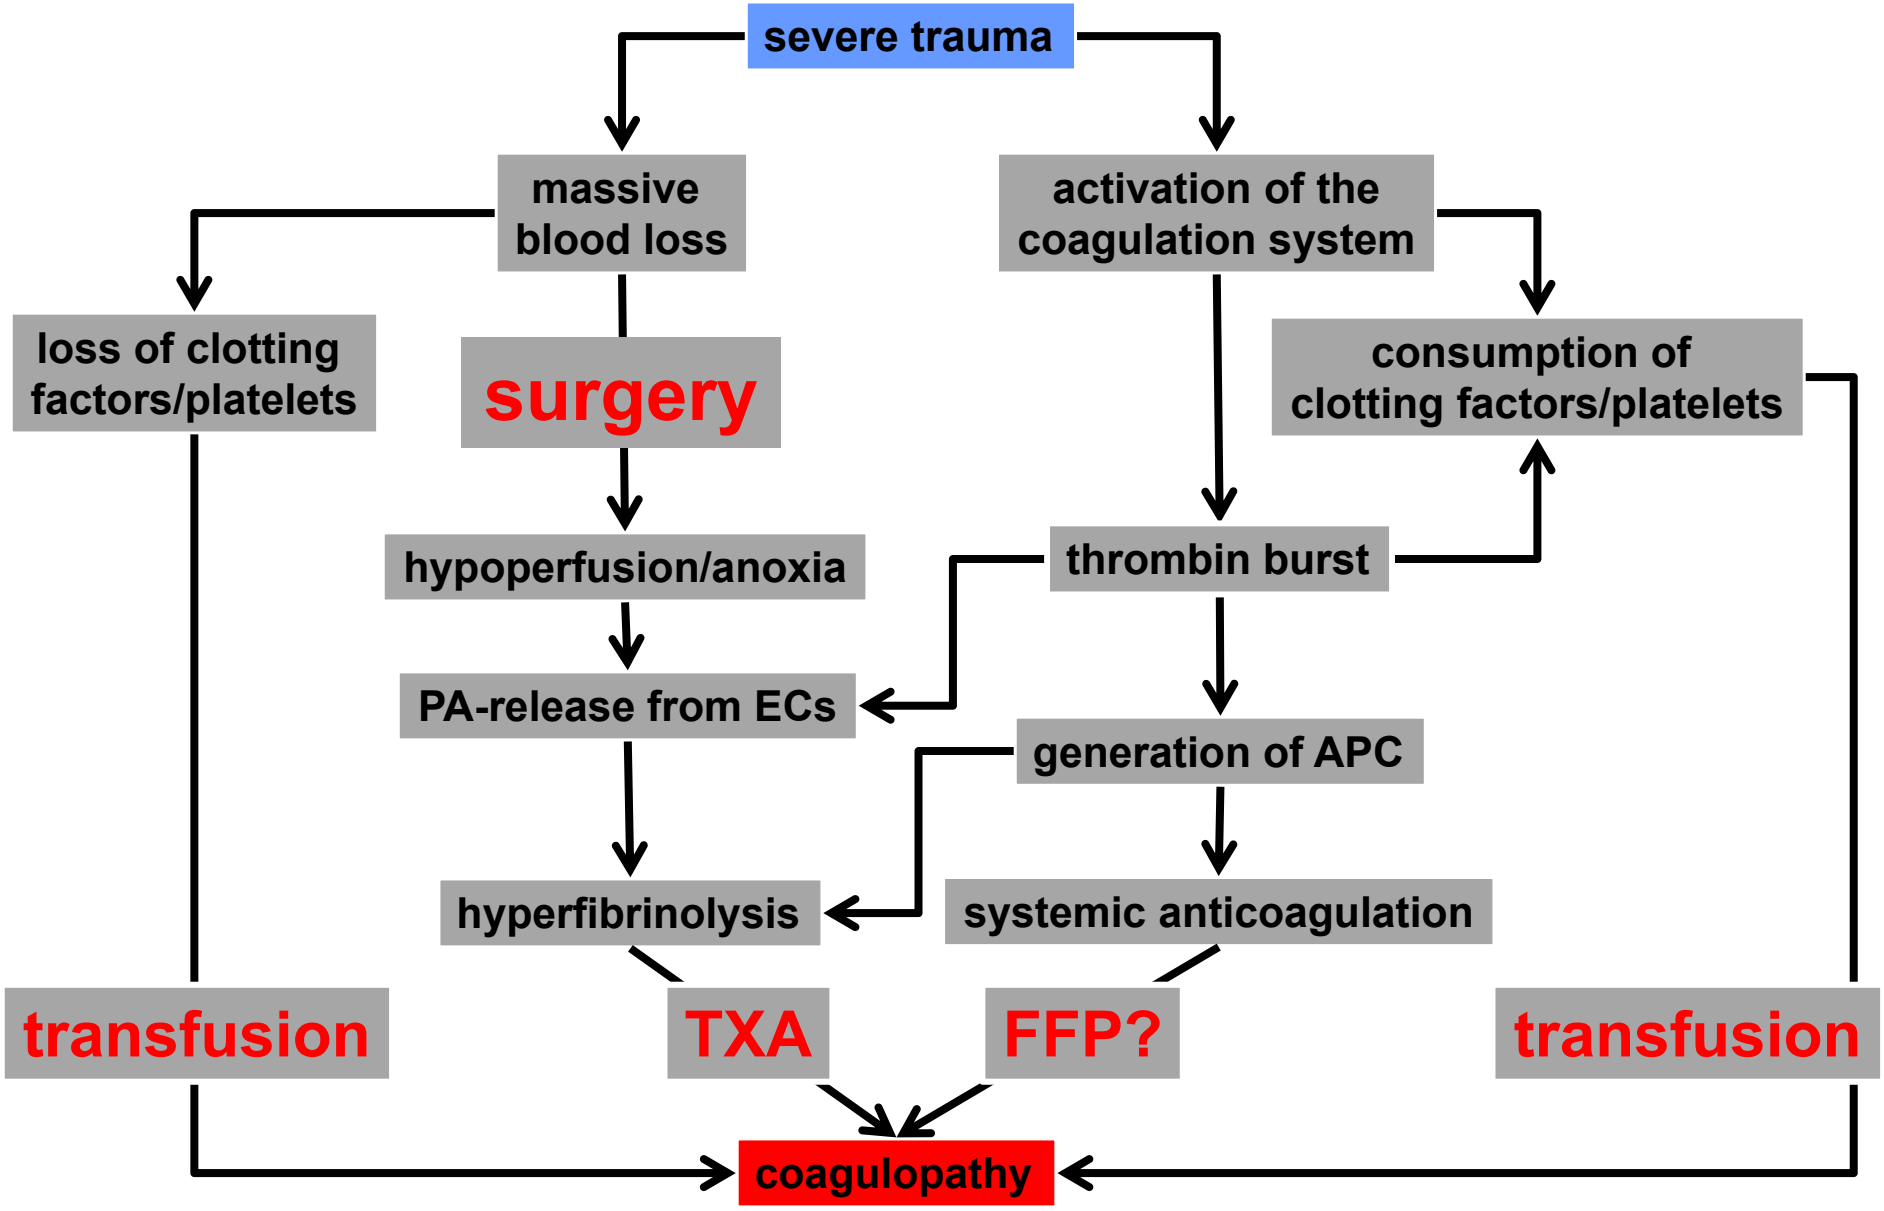
TIC: treatment options

universitäts klinikum bonn



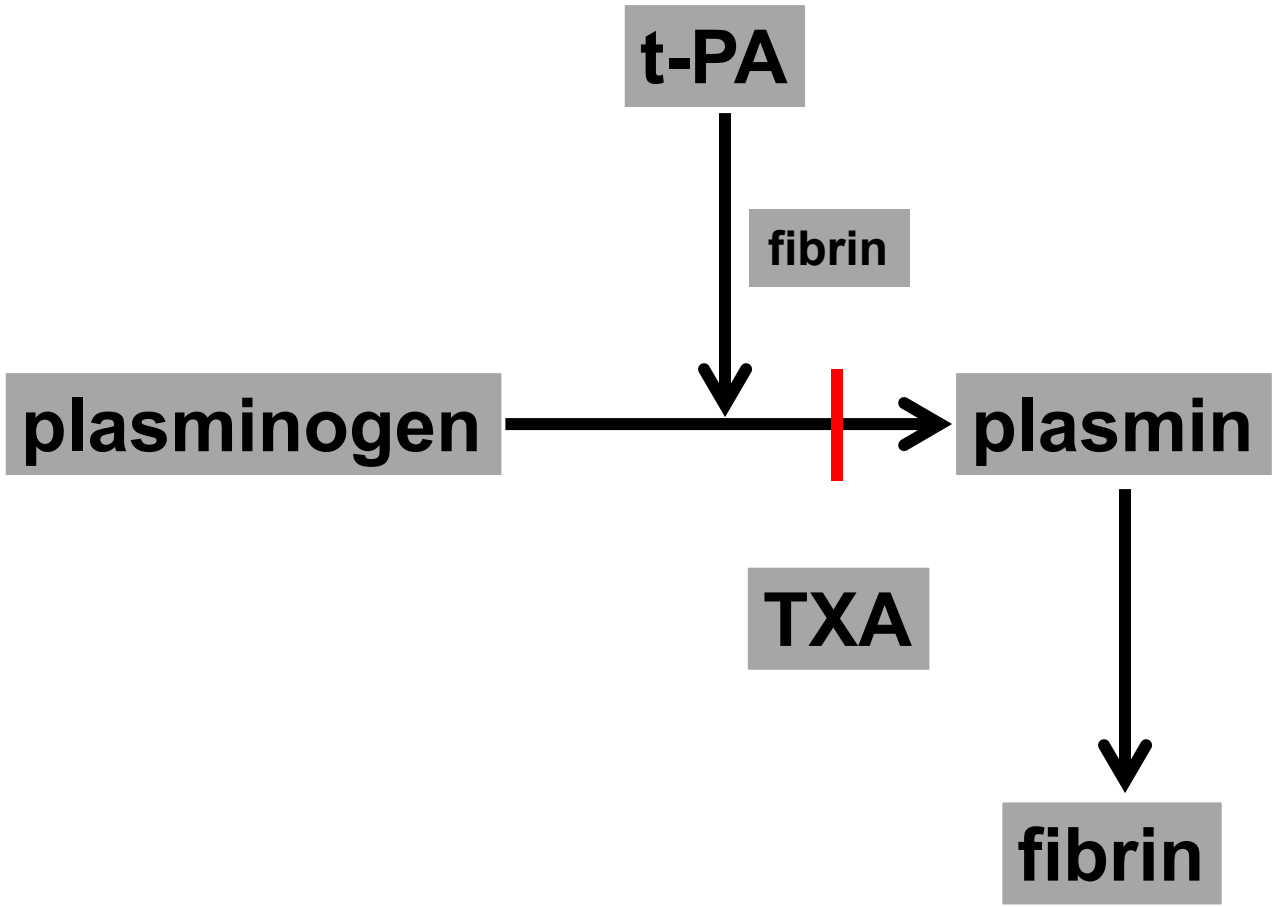
TIC: treatment options

universitäts klinikum bonn



Tranexamic acid (TXA)

universitäts klinikum bonn



CRASH-2 trial

universitäts klinikum bonn

Study population:	**20,211 trauma patients**
Treatment group:	**1 g TXA bolus/1 g over 8 h**
Control group:	**Placebo**
All-cause mortality:	**14.5% vs. 16% (p = 0.0035)**
Bleeding related mortality:	**4.9% vs. 5.7%**

[1]CRASH-2 trial. Lancet 2010; 376: 23-32, TXA: tranexamic acid

universitäts klinikum bonn

TIC: treatment triggers

1. Clinical probability of TIC

1. Laboratory values

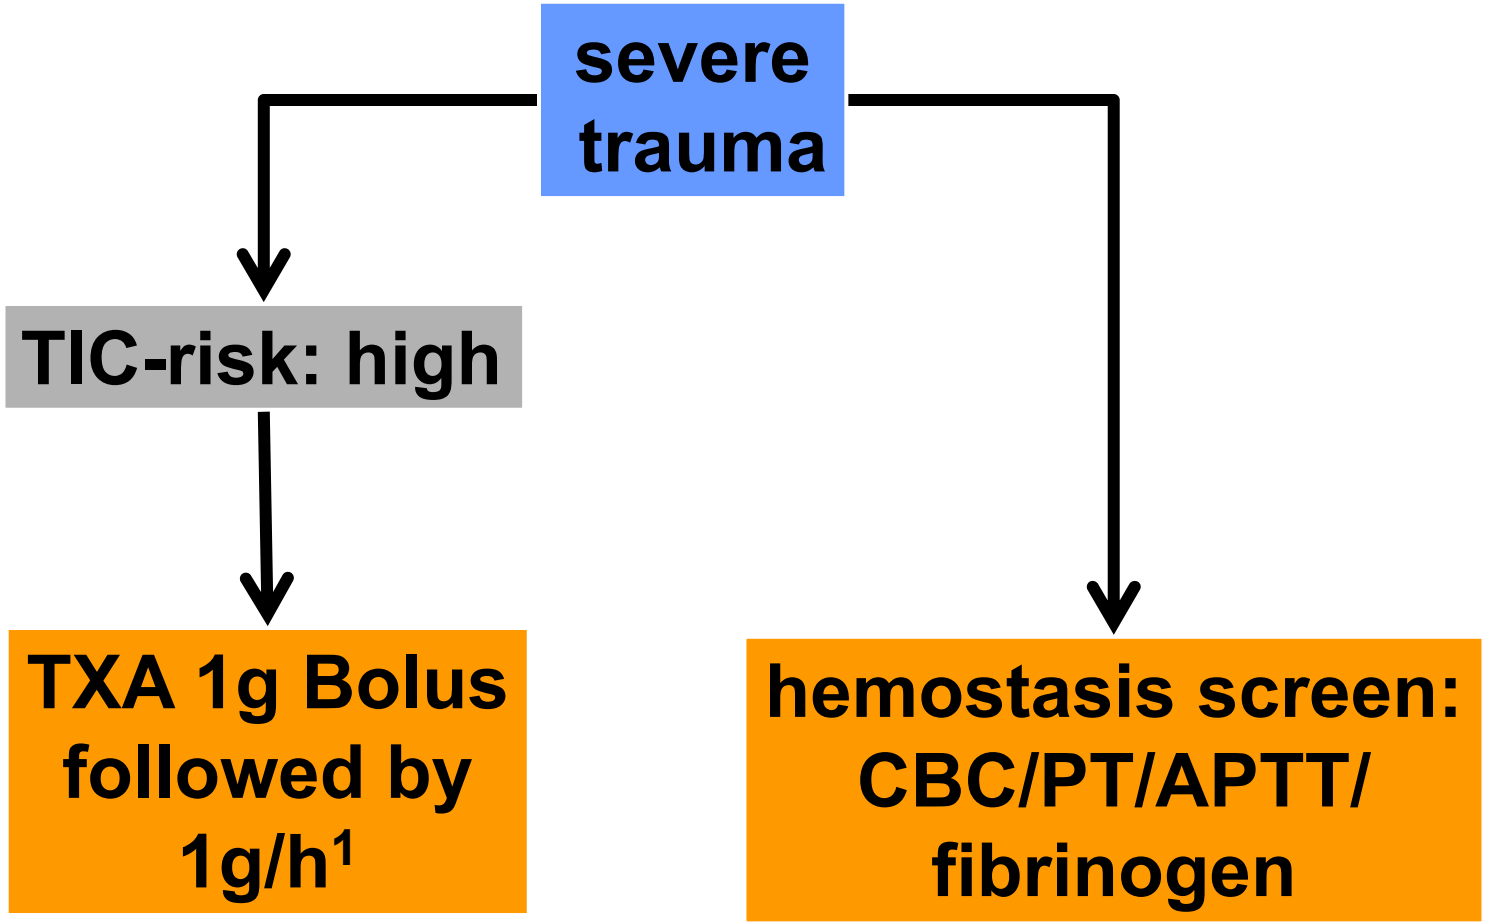
High TIC risk: indicators*

universitäts klinikum bonn

- hemorrhagic shock on admission
- pelvic fracture/multiple bone fractures
- rupture of liver/spleen/positive FAST
- brain damage
- BE < -6
- use of antithrombotic drugs

** TASH-Score, German Society of Trauma Surgeons*

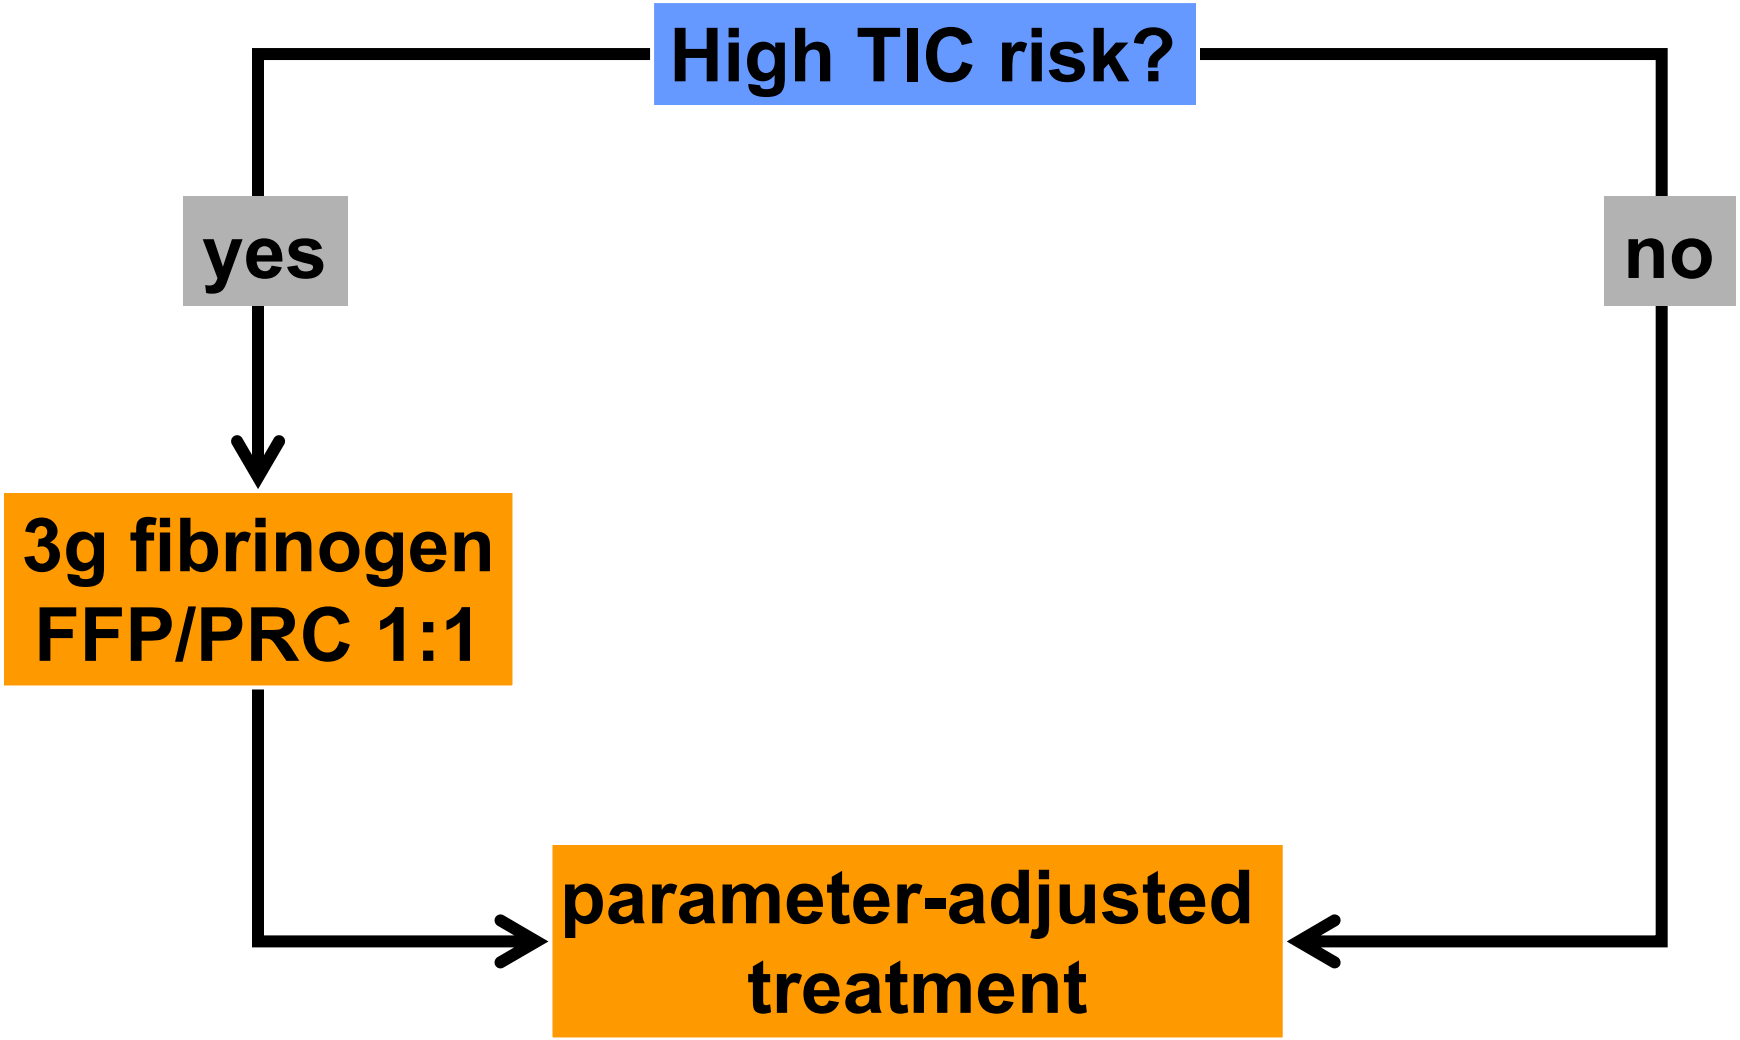
TIC: hemostatic support (I)



[1]CRASH-2 trial. Lancet 2010; 376: 23-32, TXA: tranexamic acid

TIC: hemostatic support (II)

universitäts klinikum bonn



Parameter-adjusted treatment

universitäts klinikum bonn

Fibrinogen:

- **< 1.5 g/dl with ongoing blood loss/ICB**
- **< 0.5 g/dl**

→ **3 g fibrinogen concentrate**

Prothrombin time:

- **> 25s with ongoing blood loss/ICB**
- **< 50s**

→ **50 IE/kg b.w. PCC**

ICB, intracranial bleeding;

Parameter-adjusted treatment

→ **platelet transfusion, if platelet count:**

- **< 100.000/µl with ongoing bleeding/ICB**
- **< 50.000/µl with coagulopathy**
- **< 30.000/µl**

ICB, intracranial bleeding

Parameter-adjusted treatment

universitäts klinikum bonn

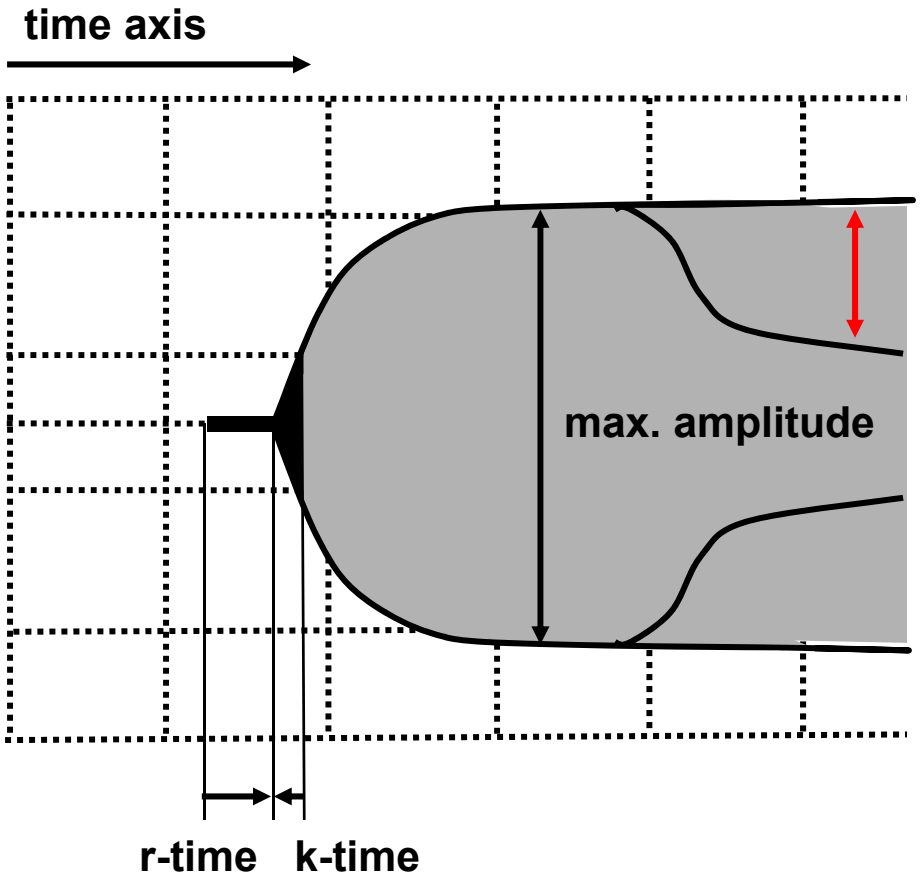
Signs of hyperfibrinolysis

→ **bolus injection of 1 g TXA followed by 20 mg/kg b.w./h**

→ **3 g fibrinogen concentrate**

TEG: fibrinolysis

universitäts klinikum bonn



Take home message (III)

universitäts klinikum bonn

- TIC is frequent in severe trauma patients.

- TIC is caused by consumption and loss of coagulation factors and platelets and by secondary hyperfibrinolysis and APC formation.

- TIC can be successfully treated by TXA treatment and transfusion of blood products including fibrinogen, fresh frozen plasma and platelets.

Acute Bleeding: Grading

- **Life-threatening (WHO grade 4)**
  Trauma or critical organ bleeding

- **Severe (WHO grade 3)**
  gross blood loss, requires transfusion

- **Mild blood loss but clinically significant (WHO grade 2)**

universitäts klinikumbonn

Critical organ bleeding

Suspected anticoagulant treatment

antithrombotic screen: APTT/INR/TT/BT/aFXa/TTI

APTT, activated partial thromboplastin time; INR, international normalized ratio; TT, thrombin time; BT, batroxabin time; aFXa, anti-FXa-activity; TTI, thrombin inhibition time

Anticoagulant screen

universitäts klinikum bonn

Parameter	Result indicating a clinically relevant anticoagulant activity				Reference range
	LMWH/ Fonda-parinux	Argatroban Bivalirudin Dabigatran	VKA	Rivaroxaban Apixaban	
APTT	normal	prolonged	prolonged	prolonged	< 35s
INR	normal	increased	increased	increased	< 1,2
TT	normal	prolonged	normal	normal	< 21 s
BT	normal	normal	normal	normal	< 21 s
aFXa	detectable	not detectable	not detectable	detectable	< 0,1
TTI	no inhibition	inhibition	no inhibition	no inhibition	

Anticoagulant screen

universitäts klinikum bonn

Parameter	Result indicating a clinically relevant anticoagulant activity				Reference range
	LMWH/ Fonda-parinux	Argatroban Bivalirudin Dabigatran	VKA	Rivaroxaban Apixaban	
APTT	normal	prolonged	prolonged	prolonged	< 35s
INR	normal	increased	increased	increased	< 1,2
TT	normal	prolonged	normal	normal	< 21 s
BT	normal	normal	normal	normal	< 21 s
aFXa	detectable	not detectable	not detectable	detectable	< 0,1
TTI	no inhibition	inhibition	no inhibition	no inhibition	

Anticoagulant screen

universitäts klinikum bonn

Parameter	Result indicating a clinically relevant anticoagulant activity				Reference range
	LMWH/ Fonda-parinux	Argatroban Bivalirudin Dabigatran	VKA	Rivaroxaban Apixaban	
APTT	normal	prolonged	prolonged	prolonged	< 35s
INR	normal	increased	increased	increased	< 1,2
TT	normal	prolonged	normal	normal	< 21 s
BT	normal	normal	normal	normal	< 21 s
aFXa	detectable	not detectable	not detectable	detectable	< 0,1
TTI	no inhibition	inhibition	no inhibition	no inhibition	

Take home message (IV)

- If six relatively simple screening procedures are used, patients showing clinically relevant plasma levels of anticoagulants can be identified.
