Session title:
What You Need to Know When Defending Your Network: Lessons from the Battlefront

Session abstract/synopsis:
In October 2012, the City of Naperville, Illinois experienced a network intrusion that lead to a significant disruption in City IT services and an FBI investigation. This detailed case study will cover many aspects of the network intrusion event including the methods used to identify the intrusion attack vectors, the development of a security incident mitigation and recovery plan, and post-intrusion risk mitigation steps. Because the intrusion and its effects impacted key City IT services, the value of comprehensive disaster recovery and business continuity planning will be highlighted, as well as the importance of project management and emergency management skills for IT professionals. Finally, the presentation will cover critical aspects of security incident response planning for IT management professionals that are essential in preparing for, and recovering from, a computer security incident.

Speaker Name:
Larry Gunderson

Speaker Job Title:
IT Support and Consulting Practice Leader for ClientFirst Technology Consulting

Speaker Biography:
Larry Gunderson is a Practice Leader for ClientFirst Technology Consulting where he provides a wide range of information technology consulting and management services to public sector clients. Prior to accepting a position with ClientFirst, Larry was the Chief Information Officer for the City of Naperville, Illinois.
