

Ohio Opiate Project ECHO™: Expanding Access to Medication Assisted Treatment

Using simple videoconferencing technology, physicians connect to a community of learners that offers:

- ❖ Weekly case-based clinical discussions focused on the evaluation and treatment of opiate addiction with medication-assisted treatment. Opportunity to present actual patient cases and receive guidance from experts.
- ❖ Gain up-to-date knowledge through brief didactic presentations on topics of interest to learners.
- ❖ Acquire new skills and competencies. Become part of a community of learners, increasing professional satisfaction.
- ❖ **No cost CME available.**
- ❖ **Mentor ECHO™ is an 8-week session for newly waived physicians just starting to provide MAT**
- ❖ **Continuing Education (CE) ECHO™ will provide on-going consultation for challenging cases. Experts from different medical specialties will rotate each week.**

Learning Objectives:

- 1) Evaluate patients for appropriate referral to medication-assisted treatment (MAT) using a collaborative, person-centered approach.
- 2) Describe effective treatment strategies for prescribers using MAT in office-based settings.
- 3) Recognize the level of care needed for complex patients in MAT programs utilizing team-based warm handoffs during transitions of care.
- 4) Educate patients, families and other community/social supports about the emotional and behavioral aspects of opioid use disorders in order to reduce stigma
